'Not I,' said Val, brightening a little, and withdrawing his eyes from some dreamland in which, to judge by his looks, he had seen unpleasant things. 'Why should I be sad?' His looks caressed her as he turned to her.

'Who knows?' she said, and lay back silent for a while.

'You are not sad, are you?' he asked after a pause.

'No,' she answered with a ghost of a smile. 'Why should I be sad?'

'Like a good wife,' said Val, 'you base your reasoning on mine.'

She smiled faintly in answer, and again they were silent. But in real truth they were both sad, and there was a reason for their sadness. If a man sins, however sweetly, he is pretty sure to suffer for it; and now Val's own scorn was master of him, and in proportion to the very virtues left in him, he suffered. He was never altogether free of Gerard's face, and the accusations it had power to bring against him. A dull man sins with comparative impunity. An imaginative man, who has a heart to feel his own imaginations, suffers out of all proportion, and is yet justly served, inasmuch as he has sinned more deeply, having the more virtue in him to sin against, and seeing beforehand whither he is bound. And so Val and Constance, having sacrificed so much in order to be happy, were unhappy after all. Alas, it was always so. Of what avail can it be to preach a sermon here? There is no royal road to happiness, along which no pains shall be endured.

Constance arose, and looked over the little vessel's side at the sparkling waters; and after a while, Val joined her.

'This is all very wonderfully beautiful,' she said, with a little wave of her white hand.

'Yes,' Val assented.
'What is that splendid jewel out there?' she asked. 'I suppose when we come nearer, we shall find it a mere rocky island. What is it called?'

'I don't know, darling,' said Val drearily.
'Get out your sailing-maps,' she said, striving to occupy his thoughts, 'and let us find the names of the places we are passing.'

Val obeyed her; and having descended to the cabin, returned with a roll of charts, laid them on a table, had a brief talk with his sailing-master, and having discovered the position of the yacht, began to name the islands here and there. Constance with forced animation stood over him and assisted in the search. He looked up suddenly, and their eyes met. Val dropped his gaze and walked to the side again; and as Constance bent above the charts, a tear fell upon them. She could not please, she could not soothe him; she had no power to exorcise this demon of regret. She left the deck and went below; and Val having hung a while over the rail, turned and missed her. He began to fold up the charts, and saw the great starred tear-drop on one of them, and his heart fell lower and lower. Somewhat sullenly, he lit a cigar and paced to and fro upon the deck. He loved her with his whole heart; there was nothing he would not do to make her happy, if he could but see his way to it. He was sure of her love in turn, and yet they were both moody, both unhappy.

The French cynic proclaimed that two things were essential to happiness—a hard heart and a good digestion. Though I should be inclined to widen the list a little, I do not think I should quarrel with the essentials. A hard heart is a great help to personal comfort. If you can pass a shivering beggar in a snow-storm and feel your own broadcloth no reproach to you, that is in its way a gain. Perhaps—human nature is perverse—perhaps you would rather be without the gain, though not, in spite of pity, without the broadcloth. This life is but a twisted skein for a man with a conscience. With a hard heart, great gift, you may push through the thin filamental knots almost without an effort. If they are made of human nerves, the nerves are not yours. What resolute creature, bent on happiness, can be stopped upon his way by cobwebs?

But here were two people of more than common tenderness, and they suffered. The very narrowness of the life which, in the double egotism of their love, they sought to live, added to their miseries, and made ennui and regret inevitable. It would have been wiser to have looked for a refuge in society than in this loneliness; but though both of them knew this, neither of them altogether cared to say it.

In a while, little Mary came on deck to tell her master that dinner was laid in the cabin; and he descended. Fish and flesh of the daintiest, fruits, and wines of famous vintage; and love at the table too, with manly grace and feminine beauty, and yet no joy in anything. They came on deck again, and found the awning cleared away, and a Mediterranean sunset in the skies. A miracle of colour from zenith to horizon, and the purpled rosy golden glory flushing, though more faintly, to the very east. But in the west from which they fled, the dying sun

was clothed in splendours which were past all speech, and all the fiery solemn regalities of colour in the sky were imaged in the heaving sea upon a million broken mirrors. From form to form, from tone to tone, from gradual change to change, the glory stole downward into gloom, till here and there, amid the shadowed wrack of skyey gallery and tower, a clear star shimmered, and the day was dead, and night unrolled her own calm panorama. Now there were voices in the waves, and murmurs in the air, and mystery and darkness were abroad. The sad-hearted wedded lovers paced together on the deck, until the moon arose, to build a new city in the clouds, with many a long-drawn parapet and frowning battlement. There are hours when every mood of Nature's suits the soul, and these were of them. Val and Constance paused, hidden by the little deck-house from the man who held the wheel. They were all alone, and all the world to each other, but they embraced with tears, and cheek touched cheek coldly. There was a cry in the heart of each—*my fault!*

'You know I love you,' he murmured with melancholy tenderness. 'How can I make you happy?'

'There is but one way,' she answered, clinging to him. 'Let me see *you* happy!'

Sal embraces followed. The prescription was one he had no power to fulfil, and they both knew it.

It was at Corfu that they first received English letters. There was one from Reginald to Val, which said simply: 'SIR—My opinion of your conduct is probably of little value to you, though you do me the honour to solicit it, and to offer what seems intended as a defence of your own proceedings. Perhaps, however, I shall indicate it clearly enough if I express my desire to hear no more of you.—I am, Sir, your obedient servant, REGINALD JOLLY.' This stung the recipient a little, but not much. A kinder farewell would have been bitterer to him, for he was one of those men who harden at reproof, but melt at pardon. There was a letter for Constance from her father, in which he, from a heart metaphorically bleeding and broken, quite forgave her. He would rejoice, he said, to welcome her back again to that torn and shattered organ, and was at present living in Paris, where he would be delighted at any time to see her. The emotional gymnastics of this epistle had no effect upon the reader. She handed it to her husband, who, not being even yet so depressed that all humour was dull to him, chuckled above it with a half-hollow enjoyment. But Aunt Lucretia wrote a letter, which bore upon its pages the marks of tears, and in it, with many cruel upbraidings, she told Constance how the news had been brought to Lumby Hall, and how Gerard had received it. Constance would fain have left this letter unread, but the lines seemed somehow to fascinate her, and she could not get away from them.

'What is it troubles you?' her husband asked her, standing near whilst she read, crying and sobbing.—She held the letter out to him.—'May I read it?' he said.

'Yes,' she answered, rising in a sudden tempest. 'It was your doing. Read it.' And with that, she swept from the room, dropped her veil, and walked out of the hotel, angry with herself, angry with him, and bitterly remorseful.

Val obeyed her injunction, and felt the sting of it before he had gone far. 'She was right,' he said, standing with drooping head, with the letter at his feet, and his hands depending nervelessly over it. 'It was my doing, and the punishment belongs to both of us.' From that hour the unhappy wedded pair had no power to comfort or console each other. They went on to Constantinople in a wretched reserve, broken by bickerings which ended in reconciliations, but always left the breach between them a little wider. At one of the Pera hotels, Constance met friends of hers, who received her with great cordiality, and with them she and Val crossed over to Cairo. The rainy season came on, and Val gave the party yacht-room, and carried them to Naples, where they proposed to winter. The yacht hung in the bay, and for a brief month or two Constance threw herself into the pleasures of society, and was acknowledged the reigning beauty of the place. Val took to short absences, little regretted on either side; and at last with simple coldness, outwardly, though with the frost of downright despair in their hearts, they parted at Christmas-time, and Val sailed alone up the gloomy Adriatic to Venice, and left it disgusted in eight-and-forty hours, and sailed back to the Mediterranean, and everywhere carried his broken hopes and his remorse with him.

About the end of January, Gerard was on a visit, when some people unknown to him, and knowing nothing of his story, came to stay in the same house with him. One of them told the tale of Mr Strange's curious desertion of his charming wife. Mrs Strange was fascinating all the world of Naples, and Mr Strange was yachting about alone—at that time of year too, and was it not extraordinary?

'Hiram,' said Gerard that evening, 'I shall want you to come with me to London to-morrow.'

Hiram quietly assented, and began to get things ready for the journey.

'If that man's come back again,' said the watchful body-guard, looking at his master's face, 'I shall have to keep a pretty sharp look-out to hold you out of mischief. I've got my score against Valentine Strange, Esquire; but I ain't goin' to see you hanged for him, mister. Not if I dog you like a shadder!'

RECOLLECTIONS OF AN ANGLO-INDIAN CHAPLAIN.

OUR readers need hardly be ashamed if they are not well acquainted with the existence and whereabouts of Bangalore, for not every intelligent Briton is so geographically enlightened. On my return home, I took up my abode at a certain watering-place, and of course one of my first duties was to apprise my friends abroad of my safe arrival. Accordingly, I wrote a letter, and carried it to the post-office, where I inquired the price of the postage to Bangalore. The official looked at me dumfounded, and speedily reduced me to a similar condition when he made the Scotch reply: 'Bangalore! Where is it? Is it in the West Indies or the East?' I had not been many months in the country when I found

that this post-office official was not the only one who had a hazy idea as to the whereabouts of Bangalore.

Well, then, Bangalore is a large city in Southern India, with two hundred thousand inhabitants, situated about two hundred miles inland from Madras, the European capital of the Mysore country, a large military cantonment, and one of the most beautiful and delightful stations in all India. Sir Walter Scott speaks of it as 'Bangalore the strong, the happy, the holy city;' and here I cannot help paying a tribute to the genius of the great novelist. In the *Surgeon's Daughter*, the plot of which is laid in India, he describes the country over which he carries his heroine and her deliverer, stretching from Madras to Seringapatam, as minutely and accurately as if he had himself traversed the whole route, and looked down from its heights upon every plateau and every city. It was my good fortune some years ago to live in Bangalore, and I have some recollections that may be not uninteresting, connected with this Indian city.

War gives dreadful prominence to localities. A little town remains buried for centuries in peace and obscurity, until a great battle is fought near it; and then its name is echoed to the ends of the earth, and it henceforth finds a place on the pages of history. Who ever heard of Sadowa until a few years ago, when the Austrian forces were crushed beneath its walls; and not many people knew anything about Sedan until the bugle sounding from its ramparts proclaimed to the astonished world that the French Emperor and his army had surrendered. And even the wretched kraals of Zululand were made famous through the surgings of war, disaster, and victory. Thus it was that war made the names and places of the Mysore country very familiar to our grandfathers, as the spot where our great Wellington was then winning his first laurels. For thirty years and more we waged war against Hyder Ali and Tippoo Saib; and although at last victory was ours, and we effectually destroyed that proud and cruel Moslem dynasty, it was not until after many hard-contested fights, and not a few humiliating reverses.

One of these Mysore fortified cities, and the second in importance, was Bangalore. It is situated about two miles distant from the present English cantonment. The Fort and *pettah* were stormed and taken by the English under Lord Cornwallis in 1791. A monument to the memory of the fallen stands opposite to one of the gates, and its inscription tells us that Colonel Moorhouse and other gallant officers and soldiers fell on the very spot at the 'storming of Bangalore.' The Fort still presents a very imposing appearance. With its deep morass and massive ramparts, and innumerable turrets and loopholes, one would have imagined that

although it could not stand against the monster guns of our day, yet it might have made a more stubborn resistance than it did against the British troops in those olden times of a very imperfect artillery. But I suppose that fortune favoured the brave then, as she does still. In this Fort of Bangalore is one of the famous palaces of Tippoo Saib, his favourite residence during the lifetime of his father. It is now very much in ruins, but even these still tell of the barbaric splendour of the Moslem ruler. Here was enacted the tragedy so graphically described by Sir Walter Scott in the work already alluded to, when the arch-traitor Scotchman was revealed by Hyder Ali and put to an instant cruel death.

In this connection, I was told the following romantic incident by an old general officer at Bangalore. Many years ago, a landed proprietor in a midland county of Scotland, whom we shall call Stewart of Stewartfield, was outlawed for homicide, and disappeared from the country, leaving no clue to his whereabouts. Time rolled on; and there being still no tidings of the outlaw, his estate was placed under judicial custody, for the benefit of his representatives. After the lapse of many years, the property was claimed by a near relative, who became proprietor, and who, in default of direct proof of the outlaw's death, is said to have tendered, on affidavit, the following circumstantial evidence of it, as related by the late Colonel Campbell of the 74th Highlanders.

When Seringapatam was invested by the English forces in 1791, after the defeat of Tippoo Saib's army at the battle of Mallavelly, the Sultan sued for peace. Accordingly, a meeting of Commissioners was arranged to take place within a garden-house in the immediate vicinity of the fortress, to draw up a treaty. The Commissioners met; and while their proceedings were being engrossed, Colonel Campbell, who was one of the British Commissioners, sat intently gazing at the Mohammedan Commissioner who sat opposite to him at the table. At length he exclaimed half-aloud to Colonel Edington, another Commissioner: 'If Stewart of Stewartfield is alive, that's the man;' pointing at the same time to his Mohammedan *vis-à-vis*. Although the remark must have been heard by the Mohammedan Commissioner, he made no sign; but on the breaking up of the conference, and as Colonel Campbell was leaving the room, a voice whispered in English from behind him: 'Don't look round, or it may cost me my life; but meet me alone, outside the — sally-gate at midnight to-morrow.' Notwithstanding the warning, Colonel Campbell was startled by the occurrence, and involuntarily looked round, and saw the same grave Mohammedan Commissioner, whom he had suspected to be Stewart of Stewartfield, moving off in an opposite direction. Campbell kept the tryst at the spot named; but the other party, whoever he was, never appeared. Cautious inquiries were subsequently instituted about the individual in question; but nothing was elicited; nor was he again seen or heard of by any of the British officers to whom his features had previously been familiar. It was surmised that his communication with the English officer in his own tongue

had been overheard, and that probably he had been assassinated as a traitor—the fate he anticipated.

Not once, but several times have I seen a Scotchman inadvertently revealing himself under the garb of a Turk. A few years ago, a venerable Mussulman was to be seen daily in the cool of the evening taking his solitary drive along the sea-beach at Madras in his palanquin carriage. Of course he was looked upon as a genuine son of the Prophet, until one day he was taken aback, as many people are, by the exorbitant demand made upon him in a European shop for some European article. His indignant feelings laughed at his disguise, and asserted their nationality in the strong Scotch expression: 'Gude save us; it's no worth a bawbee!' When on my way home, and when on board a small Turkish steamer in the Bay of Alexandria, we were having our luggage passed by two Turkish custom officers. I scanned the features of one of them, and ventured to say to my friend Major F—, standing beside me: 'If I were a betting-man, I would stake something upon that Turk being a Scotchman.' The official heard me; and with a cunning leer, he turned to his companion, and evidently for my satisfaction, addressed him in the broadest Aberdonian dialect.

I must now return to the Fort of Bangalore, for it can tell us another old-world story, not uninteresting to Scotchmen. In an inner court of Tippoo's palace is a deep well, overshadowed by a large tulip-tree. It is now dry, and the dwelling-place of creeping things; but it was not so in Tippoo's days. From its depths were drawn up in rich abundance the cooling waters; and the beasts of burden that were told off to this duty were the English prisoners. There, to the amusement of the ladies of Tippoo's harem, as they looked down from their iron-barred window, the captive English officers were wont to trudge up and down the incline, as they alternately pulled up the full and let down the empty bucket. Among those officers, for many weary months, was to be seen the burly figure of young Sir David Baird. And not far from this well, in one of the deep dark gateways, is the cell where Sir David and his fellow-prisoners were for a time immured. When I looked into its dreary gloom, I remembered the caustic exclamation of Sir David's mother, when the news reached Scotland of her son's capture. Referring to the method in which prisoners were chained together, and to her son's well-known irascible temper, she exclaimed: 'God pity the lad that's tied to our Davie!'

It is pleasant to remember how kindly and mercifully this same noble, albeit fiery Scotchman afterwards behaved, when victory was his, to those very Mohammedan princes, who for four years had subjected him to cruelty in their dungeons at Bangalore and Seringapatam. At seven o'clock on the morning of the 3d of May 1799, Colonel Wellesley, who had attacked the latter place, reported that the breach in the walls was practicable. A storming-party composed of upwards of four thousand men, divided into two columns, were instructed, after entering the breach, to file to the right and left along the top of the rampart. The command was intrusted to Sir David Baird, who had been nearly four years

immured as a captive in the gloomy dungeons of that fortress which he was now about to enter as a conqueror. On the following morning, the troops destined for the assault were got into the trenches; and at the hour of noon they rushed into the breach and took Seringapatam by storm in an incredibly short space of time. Tippoo Sultan, pierced with four wounds, was found dead under a dark gateway of the fortress, where his flight had been stopped by a detachment of the twelfth regiment.

Major Allan was sent to inform the persons within the palace that if they surrendered immediately, their lives should be secured. He afterwards conducted the princes to the presence of General Baird, who had himself experienced the cruelty of their father. His mind, too, had been inflamed by a report, just then received, that Tippoo had murdered all the Europeans made prisoners during the siege. He was, however, sensibly affected by the sight of the princes; and his gallantry on the assault was not more conspicuous than the moderation and humanity which he on this occasion displayed. He received the princes with every mark of regard; repeatedly assured them that no violence or insult should be offered to them, and he gave them in charge of two officers to conduct them to headquarters in camp. They were escorted by a European guard, and the troops were ordered to pay them the compliment of presenting arms as they passed. Everywhere within and about the palace, evidence met the eye or ear of the depraved and sanguinary tastes of Tippoo. His name meant 'tiger'; he called his soldiers his tigers of war; and the tigers of the Indian jungles were his pets, and often his executioners; for the attendant that offended him, or the prisoner that was brought into his presence, was not unfrequently turned into a barred room or large cage, where the savage animals were let loose upon him. Near the door of his treasury, an enormous tiger was found chained. There were other tigers in the edifice, and so numerous as to give some trouble to Colonel Wellesley.

The history and character of the son of Hyder were in a manner told by the barbarous big toy invented for his amusement, which was found in his palace, and which may now be seen in the library of the East India House, London. This rude automaton is a tiger, killing and about to devour a European, who lies prostrate under the savage beast. There is likewise in the palace of the Rajah of Mysore another automaton figure of a tiger, life-size, so set on springs, that Tippoo could make it leap and light on the person of any unsuspecting visitor, who of course imagined that he was assailed by a living tiger, to the great merriment of the monarch. As evidences still extant of the wild cruelty of this Sultan, I may mention that at Nundidroog, a fortified hill near to Bangalore, there is a huge projecting rock, five hundred feet above the underlying valley, which is called 'Tippoo's Drop,' as over it he was wont to hurl his prisoners; and in the dungeons of the fortress, which are naturally-formed caves, are still to be traced, engraven on the rock, as by rusty nails, the names of English and Scotch soldiers.

Looking out from the ramparts of the Bangalore Fort, we get an excellent view of the old city, with its low, flat-roofed houses and its narrow

streets, with innumerable palm-trees, whose stems rise up tall, slender, branchless, until, from their towering tops hang down their graceful foliage and clustering fruits. The principal street of the *pettah* or town stretches from the Fort gate, and is about a mile in length. During early morning, and after the heat of the day is gone, this street is as crowded as the Trongate of Glasgow. To be sure, it is not so wide, nor are its houses on both sides so imposing, but yet it is a very busy scene, full of great interest, and not devoid of the picturesque. It is peculiarly Eastern; and perhaps its aspect to-day is little different from what it was centuries ago, long before the name and rule of England were known in India. For Bangalore was an old city, even when it was surrendered to Hyder Ali by the native prince, who had not the power to resist the might of the usurper. And under the wise and judicious rule of Hyder, Bangalore increased in importance and wealth, and attained a pre-eminence in the manufacture of silks and carpetings.

Of course, when war broke out it had its evil days; its very riches made it the coveted prey to needy friend and plundering foe. When Tippoo Saib wanted money—and it is to be feared that was not a rare occurrence—he did not, as our Chancellor does, increase the Income Tax, or make us pay for the luxury of handling a gun or keeping a dog; that was altogether too slow a process for Tippoo. He wanted money, and forthwith money must be had. The demand admitted of no delay; so, in his extremity he was wont to surround the city of Bangalore with his troops, and holding over the inhabitants the threat of instant plundering, he so fleeced them, that the very women were obliged to part with their most trifling ornaments. But luckily, Tippoo Saib was slain, and the Company reigned in his stead; and under the latter's peaceful and benign rule, Bangalore very soon arose from the dust, put off her sackcloth and ashes, and once more clothed herself with prosperity and riches.

Bangalore is now a more thriving and more important city than ever it was, and its inhabitants form a large, industrious, and on the whole wealthy community. The most important articles of manufacture are silks, cloths, and carpets; for the production of all of which Bangalore has earned a wide reputation throughout India. Thus, under British rule, and stimulated by British enterprise, this Indian city is flourishing. And yet so strangely perverse is human nature, there are to be found not a few of those intelligent Hindus who sigh for the 'good old times,' and do not hesitate to say to us: 'All very well, Sahib, but oh, give us back our old Raj!' It is difficult to make the Hindus grateful to us, and it is almost an impossibility to make them love us. There is a breach that cannot easily be spanned between the conquerors and the conquered; between the white-faced strangers and the dark natives of the soil. We are giving to them, almost without money and without price, the splendid trophies of our scientific research; we are making them the sharers of our commercial enterprise and wealth; we are educating them in our best and purest knowledge; and yet I feel, and every Anglo-Indian feels, that there is a mighty chasm between the Hindu mind and ours, between their sympathies and ours. Still, we will not despair.

There are evidences of a day of better things ; and prejudices, bigotries, social barriers are being gradually beaten down by advancing intelligence.

MY NEW FRIEND.

IN FOUR CHAPTERS.—CHAPTER II.

ACTING upon our friend's advice, and overborne perhaps by his energy, we told Lizzie to ask the applicant into the room in which we were seated, which, bad as it was, was by far the most presentable part of the house. The stranger was heard descending the stairs slowly, and apparently with caution ; then he presented himself at the open door, and, in obedience to my invitation, entered and took a seat. He looked round slowly upon us, and then, fixing a large double eyeglass upon his nose, looked again. He was a stout man, apparently about sixty years of age, for his hair was gray, his whiskers quite white, and though at one time he must have been of powerful frame, he was now evidently somewhat feeble, as we could judge by the manner in which he seated himself and groaned slightly as he did so.

'I am sorry to intrude upon you at this time of the evening, madam,' he began ; 'but I noticed the bill in your window a few days ago, when I was in this neighbourhood. As I must reside somewhere in this vicinity, I should have called earlier ; but I was not quite certain that an old friend could not accommodate me. I find now that he cannot do so, so have ventured to trouble you at this unusual hour.'

'Ah ! I am afraid, sir, that an unfortunate change has put it out of my power to offer you suitable apartments,' I replied. 'To be frank, sir, I have now not enough furniture for myself, instead of being able to spare any for my lodgers.' While I had been speaking, the old gentleman had dropped his eyeglass, and now, ere replying, he felt about for it in a helpless way, which would have been laughable if it had not been somewhat pitiful too. Adjusting it to his eyes again, he looked at us for a moment, then said : 'I don't want furnished apartments. I ought to have explained that at first. I have not long come home from abroad ; and my only daughter, with whom I have been staying, has now gone with her husband to Australia ; leaving me a little furniture, in case I like to keep on the house. But I don't like it ; it won't suit me at all. I want a quiet lodging with a small family, where I can furnish my two rooms ; taking my meals by myself, or with the family, as I please. I am a quiet person, I think, rather an invalid, but no trouble ; and I am willing to pay you rent for my rooms, and thirty shillings a week for my board.' His eyeglass tumbled down once more, and while he was fumbling for it—for he did not seem able to do anything without it—Scate nudged me with his elbow, and gave a knowing wink.—'I thought it best to explain that I cannot afford very high terms, madam,' continued the old gentleman, addressing my wife, 'in order to save discussion. I have made a memo. of two other addresses which may suit, but should prefer to close without further trouble, as, being an invalid, I do not care about much worry. There is my card. He handed to Mr

Scate, who sat nearest to him, a card, from which the latter read aloud, 'Mr Daniel Chelps,' and then passed it to me.

'Mr Chelps,' exclaimed Scate, as if struck with a sudden thought, 'allow me to offer you some refreshment.' Mr Chelps, turning his head a little towards him, said : 'Will you please to speak a trifle louder, sir ? I am unfortunately a little hard of hearing.'

Scate loudly repeated his invitation ; it was easier for him to speak loudly than in a subdued key.

'No, sir—no, sir !' returned the other with a sad smile. 'You have brandy there, I think, and the doctors won't allow me to touch anything but sherry.'

'Then, it's just the thing !' cried Scate ; 'for this is sherry, and the best you'll find within five miles from this place, I'll bet.'

The old gentleman sipped the wine, smacked his lips approvingly, and said : 'And now, sir, we will proceed to business.—I do not see, madam, that the misfortune to which Mr Matley has alluded need make any difference in my plans. I am an old man, as you see, and merely want to be comfortable. I want, as I have said, to live where I can either mix with the family, or shut myself up in my own room, just as I please. I shall give no trouble ; and though I cannot afford more than I said, my money is safe. I want to settle my plans to-night ; and I must honestly own, that from some little information which I obtained in my first inquiries, a week or so back, I should prefer to come here to anywhere else I have heard of, believing I should be more comfortable.'

Finding him still willing to go on with the negotiations, I at once declared my anxiety to obtain a tenant, and although he asked a few questions, Mr Chelps made no difficulties, and it was arranged that he should take up his quarters with us on the following day. The effect of the sherry upon him was to open out his heart ; for he grew so loquacious and discursive, that with very little encouragement he would have told us all about his married daughter who had gone to Australia ; about the late Mrs Chelps, on whose worth he dilated, and to whose memory he wiped his eyes ; and would, I believe, have furnished us with complete biographies of every relative he had ever possessed. We got rid of him chiefly through the tact of Mr Scate, who declared he was going to the street through which ran the omnibus the old gentleman wished to catch, and he offered his company, which the other very eagerly accepted.

Mr Chelps having no friends in the vicinity whom he cared about troubling in the matter, gave us the name of a firm somewhere down by the Docks as referees. I say 'somewhere down ;' for I did not take the trouble, as I ought to have done, of going there to make the proper inquiries. He had done business with them, he said ; and they had known him, at home and abroad, for years. He insisted on paying a deposit ; and while he was settling this with my wife, and she was writing down the address of his reference, which was rather a tedious affair, as Mr Chelps's memory for names and addresses

did not appear to be very good, Mr Scate seized the opportunity of saying a few words in an under-tone to me.

'This is a lift!' he said. 'You have let your place, and let it well too, I consider, to an old fellow with no wife or relative to bother you or give trouble. Didn't I tell you your luck would turn?—and here it's turning like the tide. Tell your good little wife to keep up her spirits. I shall be round to-morrow night, and I expect to see my friends between this and then. I am sure to have something to tell you; and while you are waiting, if a five-pound note is of any service to you, it is ready at a moment's notice.—Coming, sir!—quite ready.' This was in answer to Mr Chelms; and then the two left the room and the house together; Mr Scate turning at the last moment to favour us with a grin full of meaning.

It may be guessed that Susan and I sat up for some little time talking over the strange and unexpected events of the night; of our good fortune in securing such a lodger; and what a good thing, too, it was that he had not come a few days earlier, when he would have been subject to all the annoyance and turmoil of the sale. We could manage now, poor Susan thought, especially if I could contrive to obtain some employment, which I seemed likely to do through the disinterested kindness of Mr Scate. This latter recollection of course started another subject of conversation, and we could hardly say enough in praise of him. Yet it was plain we had each a secret but very real dislike to the man, which we sought to smother by continual laudation of him. It would have been ungrateful in the highest degree to utter a word which could reflect anything but praise of him—so we did not say it; but we found out that each thought unfavourably of him all the same.

Well, the morning came; and punctually at the time he had named, came Mr Chelms also, closely followed by a small van-load of furniture. We were pleased to see that this furniture was all in good condition; was, in fact, almost or quite new, so bright and shining was everything. He explained, on our remarking upon this, that his married daughter who had gone to Australia, had furnished some rooms entirely for him, just before she knew she was going, and that her departure was very sudden. He was as chatty as before, having a nice sympathising way, which won very much upon Susan, who was greatly taken with him.

The deposit he had left in my wife's hands had enabled us to purchase one or two necessities, and even luxuries; and in the evening Mr Chelms joined us at tea, and was so cheerful in his conversation, and so full of queer little anecdotes, that he quite led us away from our own troubles, until he brought them back by asking, but in a very nice way too, what I thought of doing in the future. I told him that so far as my own resources and influence were concerned, I had little prospect of doing any good, but that a friend—an entirely new friend, indeed—Mr Scate, the gentleman whom he had seen on the previous evening, had most generously, most unexpectedly come forward, and had almost obtained the promise of a situation for me. As in duty bound, Susan and I here broke into praise

of Mr Scate, and told how he had been an entire stranger, and how he was the only one who showed anything like a kindly feeling towards us.

While I was talking, and while Susan was talking, Mr Chelms listened with great intentness; but it was difficult to avoid a smile when I saw him put up his double eyeglass, as 'though he listened with it; and then, when it fell off, as it was continually doing, the helpless way in which he would grope about for it, was more comical still. We raised our voices at first when speaking to him; but he told us there was no occasion for this with us, as, when persons spoke clearly and distinctly, he could hear them much better than he could those who bawled at him. He was very much interested in our account of Mr Scate, in whom he declared, he had taken an interest at first sight.

Very soon after this, the latter's loud knock was heard; and then Mr Scate was immediately shown in. Mr Chelms rose as he entered, and after a very friendly bow to the visitor, said to us: 'I shall be down again in a few minutes, Mr Matley, when, if you will allow me, I will sit for half-an-hour and have a chat with Mr Scate and yourselves.' Of course we all said we should be much pleased if he would join us, Mr Scate probably being the most emphatic of the three; and the old gentleman toddled slowly up-stairs.

Scate listened to his retreating footsteps with a knowing look, until he was satisfied Mr Chelms was out of hearing; then turning to us with the grin and wink so customary with him, said: 'You've got the old boy all right then?—You will always recollect, Mrs Matley, that I said at the first moment "he would do." My wife assured him she should always remember this; and then Mr Scate proposed that we should sit down and talk business.

He at once said he had seen the friends from whom he hoped so much, and that they were quite willing to engage me, so that I might expect to hear from them in a few days. If I did join them, I should find it somewhat better than drudging on in a miserable office as clerk. His friends did not go in much for clerks—no, no; that was not their game. On hearing this, I naturally inquired in what 'their game,' as he styled it, consisted; but although he launched out into copious praise of their liberality, and admiration of their extensive transactions, I could not understand what kind of business they carried on, or what particular situation I was likely to fill. Yet he kept on talking about the firm, and congratulating me upon my good fortune in securing a position with them, and glancing at the confidence they reposed in him, as shown by their accepting a stranger on his recommendation, until I heard Mr Chelms's slow lumbering step approaching.

I called his attention to this, and said that we perhaps had better go up-stairs into the parlour, dismantled as it was, for a short time, in order that we might for a few minutes more speak uninterruptedly. Scate reflected for an instant, then exclaimed: 'O no. Never mind the old fellow! I shan't say anything that I don't want him to hear. I shan't let him know too much, believe me. Besides, he is rather good fun, and I like to watch him.—Hush! here

he is. Ha! Mr Chelps,' he cried, with an assumption of the heartiest good-fellowship, as the old gentleman entered the room, 'how are you now?'

Mr Chelps, as he came in, answered the salutation frankly; and then Mr Scate proceeded to repeat the 'information he had just given to us. While Mr Scate was telling all this to Mr Chelps, my wife left us, to superintend Lizzie in her domestic operations.

Mr Chelps's mind still ran on my affairs; and as the evening wore on, he plied Mr Scate with very direct questions, such as I much wished to ask, but lacked the courage to do. Mr Scate was at first as vague with him as he had been with me; but under the pressure of the old gentleman's repeated inquiries, he eventually explained that his friends were 'general agents and miscellaneous merchants,' who bought and sold all kinds of goods for all markets, home and foreign. Anything, anywhere, they would buy if it were cheap and saleable; and would sell at the smallest profit to do business quickly. That, their business being rather peculiar, they preferred to conduct it by agents on whom they could rely—'Such as our friend here, Mr Matley,' he said—to having a central office, as other merchants did. They always bought for ready-money, which gave them a command of the market, so far as needy venders were concerned, so that they could often obtain goods at much less than the cost of production. This applied as much to foreign manufacturers as to English. When they gave short bills to foreigners, they would always discount them themselves if required. They reckoned on a dividend of forty per cent. every year.'

The eyes of Mr Chelps twinkled and glistened more than ever as he listened to this, until finally he said, that the idea seemed so good, so feasible, and so profitable, that having a great deal of time on his hands, and some spare capital by him, he was more than half inclined to set on foot something of the kind himself. At this Mr Scate's eyes twinkled and glistened even more than those of the old gentleman, and he said that, with his influence, it was not impossible but that Mr Chelps might be admitted to take a small share in this very business. 'A most difficult thing to be done, I assure you,' said he; 'for they won't look at outsiders as a rule—turn away thousands after thousands every year, that people are almost going down on their knees and asking them to take. Yet, with my recommendation, perhaps— But how much could you invest?' he said abruptly.

'Not a great deal—not more than eleven or twelve hundred pounds, which, by-the-by, is already invested,' returned Chelps, who seemed by his tone to admit the contemptible smallness of the sum he spoke of. 'All the rest is in houses, with a few ground-rents.'

'Well, never mind; I will see what I can do about it,' returned Scate. 'When can you get at your money? I ask, because I know they are making a lot of purchases, so now will be the time.'

'As soon as you please after the first of next month,' replied Chelps. 'That is not very far off.—What name did you say your firm's was?'

It was certain that Mr Scate had not mentioned any name; and he advised the old gentle-

man not to go any further with his inquiries at present, until he knew whether there would be any chance of his money being used. But Chelps by this time was in no mood to be put off or evaded, and he determined to have their names, if only to wish success to the venture.

'Bunner, Wreggs, and Carrowble, that's them,' said Mr Scate at last; and then he went on to explain that the time named by Mr Chelps was the most auspicious he could possibly have chosen for his money to be accepted, and this being the case, he would not lose a day in breaking the matter to his firm.

This so delighted Mr Chelps, that he insisted upon our having a friendly glass of something hot, which was immediately sent for, and actually proposed to sing a song, on condition that Mr Scate would help in the chorus. This the latter unhesitatingly promised to do; and Mr Chelps began *My Pretty Jane*, and sang it through, while Mr Scate repeated the last part of each verse in conjunction with him, as a chorus! Anything more awful in the way of singing I never heard; I should think nothing more awful ever was heard. Then, after a little more discussion of business matters, Mr Scate left, with many a shake of the hand from Mr Chelps, and protestations of the warmest friendship on both sides.

I think I have said that Mr Chelps's conversation was on this evening more than usually cheerful and interesting; but directly Mr Scate had left, he seemed to fall back into his natural manner. Noticing this, I did not find my liking for Mr Scate increased; in fact, it was as much as I could do to avoid thoroughly disrelishing him, in spite of the benefit he was conferring upon me and the trouble he was taking in my behalf.

TEA AND SILK FARMING IN NEW ZEALAND.

THE articles on the above subject, which appeared in this *Journal* on March 19, July 23, and August 20, 1881, seem to have created interest both at home and abroad. Many people have cheerfully, and even enthusiastically accepted the tea and silk enterprise as one well suited to the age and locality. It has also occurred to the Councils of two of our learned Societies that an impetus might be given to the movement one way or other, if papers on the subject were read before their members, or contributed to the pages of their Transactions. Accordingly, on the 31st of January, this year, the Society of Arts, London, listened to and discussed an essay; and in April the annual volumes of the Highland and Agricultural Society of Scotland (Edinburgh) contained a contribution on the same topic.

Among the encouraging symptoms which the proposed enterprise has elicited, it may not prove uninteresting to allude to one or two. By a New Zealand newspaper, the *Thames Advertiser* of January 28, we are informed that at a public meeting held in the north of Auckland it was decided to form a joint-stock Company to commence silk-culture in that district on a commercial scale, and that four hundred shares were subscribed for in the room. Elsewhere, according to the *Colonies and India* of

February 24 and May 12, another enterprising section of the colonists had turned their attention to tea-cultivation. The Auckland Acclimatisation Society had engaged a practical tea-grower to experiment, with the gratifying result, that 'the tea brewed from the leaves was tasted by connoisseurs and pronounced refreshing and of fairly good quality.' Referring to silk, the same authority says: 'Sericulture is certain to prove a profitable pursuit if machinery is ever introduced to utilise the raw silk. The climate is suitable for rearing the worms, while the white mulberry-tree grows luxuriantly. Many thousand silk-worms are reared annually in Auckland for mere pleasure, and if the pursuit were made profitable, an extensive industry would soon spring up; but at present there is no market for the disposal of the cocoons. There cannot therefore be any doubt about the success of sericulture.'

So far, apparently, the good seed sown by this and other journals has taken root in New Zealand; although the colonists, unfortunately, have evidently missed or overlooked the vital point formerly so strenuously dwelt upon, of lessening or spreading the expense of labour by conducting the two industries together on the same farm, by much the same set of workpeople, and under the same chief management. On this all-important feature, another paper, the *New Zealand Times* of January 12, prints the views of a correspondent with Indian experience, who says: 'In the Kangra Valley, the silk season happens just at the tea-planter's slack time, and therefore silk-rearing may be undertaken without clashing with the interests of the tea-plantations, and might indeed help these, by keeping the labour together. Add to these two considerations this other, that tea, as a rule, requires shade, and that the mulberry does the tea underneath it no harm, and we have a combination which ought to render the spread of cultivation for silk-rearing as rapid as it is profitable.'

Probably as interesting and auspicious circumstances as any which have occurred in support of this advocacy have arisen from the greatly improved attitude and bearing of the Maoris since their troublesome agitators were shut up in prison a few months ago. It appears that the New Zealand Premier, in the course of a recent provincial tour, stopped at Ohinimutu, where the Maoris were assembled in large numbers, and their leaders addressed him for two hours on the subject of their educational requirements. They wished the establishment of schools where their boys might be taught European trades. Another most pleasing reminiscence, the significance of which can hardly be overrated, was the receipt, a few weeks ago, by the writer, of a letter from a Maori chief, the Hon. Hone Mohi Tawhai, M.P. Some little time ago, the details of the enterprise in question had been sent to this native gentleman, with the view of eliciting an expression of opinion. His reply conveyed assurances of his gratification at the efforts being made to promote the establishment of tea, silk, and the other subsidiary industries, in his native province of Auckland; he referred to the growing habits of diligence he had observed among his countrymen, and their aptitude to learn whatever they might be taught; and expressed his desire to aid and assist the proposed undertaking in every

way. That the recognition and influence of Mr Tawhai should react with the happiest effect upon the other Maoris in Auckland will seem highly probable, when it is mentioned that his speech on September 6, 1881, in the House of Representatives, at the discussion of the Representation Bill, was pronounced by the *Dunedin Morning Herald* to be 'one of the most vigorous and characteristic ever given by a Maori member of parliament.'

Old colonists settled in this country scarcely need to be reminded, and our readers will feel pleased to learn, that it was the father of Mr Tawhai, in conjunction with another native of rank, who, on a critical occasion during our New Zealand military troubles, assisted the British army by collecting six hundred of their followers, and at their own expense armed, ammunitioned, clothed, fed, and even paid the men, and successfully marched them against the rebels. Living in more peaceful times, when the tongue and pen have partially blunted the sword, the loyalty of the father has been inherited by the son; and it will not be surprising if this important ally should speedily have it in his power to do more for the promotion of tea and silk culture in New Zealand than all the other influences which have hitherto been invoked.

CONNUBIAL TRIBULATION.

'VEN you're a married man, Samivel,' says Mr Weller to his son Sam, 'you'll understand a good many things as you don't understand now; but vether it's vorth while going through so much to learn so little, as the charity-boy said ven he got to the end of the alphabet, is a matter o' taste. I rayther think it isn't.' It is somewhat sad to find a philosopher of the senior Mr Weller's profundity undervaluing in this way the teachings of experience. That matrimony is a great teacher, no reasonable man will attempt to dispute. We have it on the authority of a widower who was thrice married, that his first wife cured his romance, the second taught him humility, and the third made him a philosopher. Another veteran believes that five or six years of married life will often reduce a naturally irascible man to so angelic a condition that it would hardly be safe to trust him with a pair of wings. A third declares that it requires the experience of a husband and father who coldly walks through the small-hours with a crying baby, while the mother inquires at half-hour intervals why he can't keep it quiet, before a man can bring himself to look forward hopefully and cheerfully to another and a better world.

The wisest policy, when you have caught a tartar, is to make the best of a bad bargain, and if you can't get the upper hand, do as Old Mother Hubbard did when she found the cupboard empty—'accept the inevitable with calm steadfastness.' It may even be politic to dissemble a little, and pretend you rather enjoy it than otherwise.

Whatever you do, don't appeal to the girl's friends for comfort or consolation. They will only laugh at you. Take warning from the unfortunate young man who, every time he met the father of his wife, complained to him of the ugly temper and disposition of his daughter. At last, upon one occasion, the old gentleman, becoming weary of the grumbling of his son-in-law, exclaimed: 'You are right, sir; she is an impertinent jade; and if I hear any more complaints of her, I will disinherit her.'

Equally vain was the appeal for sympathy which another unfortunate Benedick made not long ago—this time to the public at large. He was a citizen of Birmingham, and he wrote to a local paper in bitter resentment against the modern rage for higher education in women. Twenty years ago, he said, he had married a paragon of intellectual excellence. The lady had 'done wonders in high education,' and considered herself equal to any 'in high art.' But she had not condescended to make herself acquainted with such mean matters as the prices of provisions and the ordering of a household. As for paying a visit to the kitchen, she would as soon think of herself ordering the meat from that unæsthetic emporium the butcher's shop. The result of all this, wailed the wretched husband, was that 'so far as comfort goes, I might just as well have been sold for a canal boat-horse; for while I am congratulated on the gem I possess, I am made sensible of the burden it involves.' Of course this remarkable letter was everywhere regarded as a highly entertaining production, and was made the sport of facetious paragraphists all over the country.

A good deal of matrimonial tribulation was brought to light in the last census returns. Several husbands returned their wives as the heads of the families, and one described himself as an idiot for having married his literal better-half. 'Married, and I'm heartily sorry for it,' was returned in two cases; and in quite a number of instances 'Temper' was entered under the head of infirmities opposite the name of the wife. Confessions of this sort, besides being, as we have already hinted, somewhat indiscreet, are often also decidedly supererogatory, for conjugal dissensions, like murder, will out, and that sometimes in the most provoking and untimely manner. Take an illustration. At a recent fashionable wedding, after the departure of the happy pair, a dear little girl, whose papa and mamma were among the guests, asked, with a child's innocent inquisitiveness: 'Why do they throw things at the pretty lady in the carriage?' 'For luck, dear,' replied one of the bridesmaids. 'And why,' again asked the child, 'doesn't she throw them back?' 'Oh,' said the young lady, 'that would be rude.' 'No, it wouldn't,' persisted the dear little thing, to the delight of her doting parents who stood by: 'ma does.'

Connubial bickerings would often prove extremely amusing to a disinterested spectator. In *Mrs Caudle's Curtain Lectures*, Douglas Jerrold has presented us with some very entertaining illustrations of the 'counsels many, sweet (?) and

precious,' besides 'the sage advices,' which the dutiful wife bestows upon her erring lord and master. Poor Caudle, as a rule, thought discretion the better part of valour, and sought refuge in the arms of soothing slumber; but all men are not of such unheroic mould or docile temperament, and do not allow their wives to have it all their own way, without at least an occasional protest. 'Do you pretend to have as good a judgment as I have?' said an enraged wife to her husband. 'Well, no,' he replied deliberately; 'our choice of partners for life shows that my judgment is not to be compared with yours.'

In matters of controversy, however, the woman usually has the best of it. A witty old author advises men to avoid arguments with ladies, because in spinning yarns among silks and satins, a man is sure to be worsted and twisted; and when a man is worsted and twisted, he may consider himself wound up. The above retort might be matched by a dozen others culled from domestic controversy, in which the woman has come off triumphant. 'Really, my dear,' said a friend of ours to his better-half, 'you have sadly disappointed me. I once considered you a jewel of a woman; but you've turned out only a bit of matrimonial paste.' 'Then, my love,' was the reply, 'console yourself with the idea that paste is very adhesive, and in this case will stick to you as long as you live.' 'See here,' said a fault-finding husband; 'we must have things arranged in this house so that we shall know where everything is kept.' 'With all my heart,' sweetly answered his wife; 'and let us begin with your late hours, my love. I should dearly love to know where they are kept.' He let things run on as usual. It is not often, however, that one comes across such a crushing retort as that which a Sheffield husband received from his wife the other day, through the medium of the public press. He advertised in one of the local journals that he, Thomas A—, would no longer be answerable for the debts incurred by his wife, who seems to have been a truly amiable creature, if one may judge from the advertisement which she published next day in reply: 'This is to notify that I, Elizabeth A—, am able to pay all my own debts, now that I have got shut of Tommy.'

Some husbands would be obliged to confess, if they told the plain unvarnished truth, that when they led their wives to the altar, their leadership came to an end. 'Your future husband seems very exacting: he has been stipulating for all sorts of things,' said a mother to her daughter, who was on the point of being married. 'Never mind, mamma,' said the affectionate girl, who was already dressed for the wedding; 'these are his last wishes.' This is a complete reversal of the rule laid down by the old couplet:

Man, love thy wife; thy husband, wife, obey.
Wives are our heart; we should be head alway.

In many instances, the state of the case is rather something like the following: 'If I'm not home from the party to-night by ten o'clock,' says the husband to his better and bigger half, 'don't wait for me.' 'That I won't,' replies the lady significantly; 'I won't wait, but I'll come for you.' He is home at ten precisely.

Matrimonial dissension now and again culminates in the flight of one or other of the contending parties. A Frenchman, living in Louisiana, amused his neighbours by telling them how, when his wife deserted him in this way, he got her back without further trouble. 'Did I run after her and beg her to come back?' he dramatically asked. 'No; I did not run after her. I zhust publish in ze papaire zat I have drawn fifty thousand dollaire in ze lottery, and she vas back much quicker as no time.' There may even be some husbands, however, who would rather encourage than seek to combat or deprecate such a determination on the part of their wives. An ancient epigram tells us of 'a scholar newly entered marriage life,' who, 'following his study, did offend his wife.' The lady bitterly complains that her lord should love his books more than her society, and wishes she could be transformed into a book such as he loved to read.

Husband (quoth she), what book's form should I take?
Marry (said he), 'twere best an almanake,
The reason wherefore I do wish thee so
Is, every year we have a new, you know.

The green-eyed monster is responsible for much conjugal misery; and jealousy, as everybody knows, is often at fault, finding constant proof of its suspicions in the most innocent circumstances. Here is an amusing case in point. A French lady who was jealous of her husband, determined to watch his movements. One day, when he told her he was going to Versailles, she followed him, keeping him in sight until she missed him in a passage leading to the railway station. Looking about her for a few minutes, she saw a man coming out of a glove-shop with a rather overdressed lady. Blinded with rage and jealousy, she fancied it was her husband, and without pausing for a moment to consider, bounced suddenly up to him and gave him three or four stinging boxes on the ear. The instant the gentleman turned round, she discovered her mistake, and at the same moment caught sight of her husband, who had merely called at a tobacconist's, and was now crossing the street. There was nothing for it but to faint in the arms of the gentleman she had attacked; while the other lady moved away, to avoid a scene. The stranger, astonished to find an unknown lady in his arms, was further startled by a gentleman seizing him by the collar and demanding to know what he meant by embracing that lady. 'Why, sir, she boxed my ears, and then fainted,' exclaimed the innocent victim. 'She is my wife,' shouted the angry husband, 'and would never have struck you without good cause.' Worse than angry words would probably have followed, had not the cause of the whole misunderstanding recovered sufficiently to explain how it had all happened.

Why is there so much connubial tribulation in the world? Many reasons might be stated. Dean Swift says the reason why so few marriages are happy is because young ladies spend their time in making nets, not in making cages. But it is manifestly absurd and unfair to saddle all the blame upon the wives in this way. George Eliot tells us that marriage must be a relation either of sympathy or of conquest; and it is undoubtedly true that much of the matrimonial discord that exists arises from the mutual struggle for supre-

macy. They go to church and say 'I will,' and then, perhaps on the way home, one or other says 'I won't,' and that begins it. Some one has said that conjugal affection largely depends on mutual confidence. A friend of ours quoted this sentiment the other day in the smoking-room, and added that he made it a rule to tell his wife everything that happened, and in this way they avoided any misunderstanding. 'Well, sir,' remarked another gentleman present, not to be outdone in generosity, 'you are not so open and frank as I am, for I tell my wife a good many things that never happen.' 'Oh!' exclaimed a third, 'I am under no necessity to keep my wife informed regarding my affairs. She can find out five times as much as I know myself without the least trouble.'

As good an account of the matter as any is that of Max Adeler. 'The secret of conjugal felicity,' he says, 'is contained in this formula: demonstrative affection and self-sacrifice. A man should not only love his wife dearly, but he should tell her he loves her, and tell her very often, and each should be willing to yield, not once or twice, but constantly, and as a practice, to the other. . . . Selfishness, my dear, crushes out love; and most of the couples who are living without affection for each other, with cold and dead hearts, with ashes where there should be a bright and holy flame, have destroyed themselves by caring too much for themselves, and too little for each other.'

THE RAVINE.

A HUNTING EXPERIENCE IN INDIA.

THE following adventure happened whilst a friend and I were staying at the pretty village of S—, famous for its pictures and temples. The village lies as it were in a dent of the hills, for they rise on all sides far above it, and are intersected with numerous rocky ravines, infested with tigers, panthers, &c. In the wildest and steepest of these, that ran down between the hills close to the village, a tiger had taken up his quarters, and prowling forth at night, used to kill and carry off the cattle of the villagers. When we inquired if any brave shikarce ever attempted to shoot it, we were told that it was a sacred tiger, being protected by Cāmackria, the presiding goddess of the largest temple of the village; and that it was preferable to suffer the losses caused by its ravages, than to commit the impiety of attempting to kill it, for some terrible calamity would be certain to happen to its slayer.

My friend and I thought differently; so when, next morning, we were informed of a fresh depredation that the animal had committed the previous night, we determined to attempt its destruction. Guided by some of the natives, we went to see the carcase of the bullock, which the tiger had dragged into this very ravine. Close by the carcase there were some trees, and we quickly made our arrangements. We erected a strong platform—called by the natives a *machan*

—in a neighbouring tree ; and on this, the following evening, my friend and I took up our quarters, patiently awaiting the tiger's appearance. As we thought it useless for both of us to keep awake, we arranged that I should watch till midnight, and my friend from then till dawn.

During my watch, nothing occurred. The only objects I saw were the waving branches of neighbouring trees, and the gleam of the fireflies as they flashed through these shadows. The only sounds I heard were the clang of the cymbals and the beat of tom-toms, that rose from the valley below as a procession of villagers proceeded to the temple of their goddess, to beseech from her the boon of rain. Now the howls of the worshippers grow less, as the charmed charm of their priest arises ; and now, under its strange powers, the cries of the fanatics cease, while the notes of the tom-tom throb pulse-like in the beat of its rhythm. Now the song ceases below, and its last notes have echoed and died in the distant clefts of neighbouring valleys ; and then the only sounds heard are the cries of the jackal and the screech of some night-bird.

Towards midnight, the breeze lightens, then dies away ; then gradually, through this midnight calm, a sense of dim terror steals over me, and I shiver in the chill of an indefinable dread.

Midnight has long passed, when I awake my companion, and then, after a pull at the flask, I settle myself for a nap. I hardly seem to have closed my eyes, when I am aroused by the grip of my friend. On my asking what he saw, he said that he felt unaccountably oppressed and nervous ; and he expressed a wish for me to keep watch along with him. I agreed at once. As we sit waiting, I feel my feet are getting benumbed, and in spite of all my efforts, I cannot bring back the circulation. The sensation of deadness is also affecting my legs. My friend says he is suffering in the same way. Gradually my arms grow powerless, and I am unable to raise the gun at my side, and now even my neck stiffens. All my body, indeed, seems paralysed. At that moment, a crashing of sticks in the neighbouring bushes tells the approach of some animal. Louder the sound grows, and presently the bushes part and the head of the tiger is thrust forth, then his whole body, and he proceeds to his unmolested repast. With the sound of crunching bones in my ears, a deadening sensation seizes my brain, and I become insensible.

When my friend and I recovered consciousness, we were being looked after in the house of the headman of the village of S—. He told us that at daybreak a party of villagers had ascended the ravine, and finding us insensible, had immediately carried us to his house. And he ended by asking us whether we now believed in the power of the goddess and in the invulnerability of her tiger.

Before leaving the village, we revisited the ravine, and found our *machan* rested upon two trees growing close together, one of which was of a poisonous character. To the exhalations of this tree, when the breeze died away, I fancy we owe the state of coma that I have described, and the long subsequent illness, which prevented us from again attempting the slaughter of the tiger.

NATURE'S RAIN RECORD.

The rings which are clearly noticeable on the transverse section of timber correspond, as is well known, to the years of the tree's growth. These rings differ considerably in their width, and this variation is considered to correspond to a greater or less rainfall, the rings being widest in years of maximum rainfall. Dr R. E. C. Stearns has recently proposed to the California Academy of Sciences to institute a series of systematic observations of the rings of felled timber at various points along the Pacific coast, believing that from the aggregation of data obtained by this means, deductions as to the rainfall in past years, long before meteorological records were kept, might be made, the chief use of which would be to show how far years of maximum rainfall recurred in cycles.

THE CHILD-FACE.

At morn or eve, where'er I go,
In crowded streets or breezy hill,
In summer rains or winter snow,
A wistful Child-face haunts me still.

When all my life is out of tune,
And sorrow spreads her cheerless night,
It breaks forth like a gracious moon,
And gilds my gloomy clouds with light.

On the dull labours of the day
A glory-beam it seems to pour ;
Forbids all wild thoughts when I pray,
And makes them purer than before.

I know not when I saw the Face ;
I wist not how or whence it came ;
Whate'er the time, whate'er the place,
It haunts and follows me the same.

Was it a vision gave it birth,
Or some chance memory that I keep ?
Is it a habitant of earth,
Or but a dream-child born of sleep ?

I cannot paint its form in words ;
Its wondrous grace I cannot sing,
No more than can the April birds
Lay bare the mystery of spring.

I feel that Face will never go
As long as I draw living breath ;
'Twill be my guiding star below,
And then 'twill beacon me in death.

Perchance when I have crossed the stream,
And stand upon the holy hill,
I'll find 'twas truer than a dream,
That dear Child-face, which haunts me still.

ASYLUM NOTES.

BY A 'MAD DOCTOR.'

WHEN a young medical man completes his compulsory studies, and gets his labours crowned by the mysterious ordeal on graduation day known in the northern universities as 'capping,' it is not long before he awakes to a knowledge of the fact that it is only now that he is really beginning his life's work; and the question at once arises, what particular branch of medical practice is he to follow out? He may enter the army or navy; may go in for some hospital appointment; settle down in private practice in town or country; serve as medical officer on board some of the great ocean steamers plying between the mother countries and the colonies; or he may obtain an appointment as medical officer in some lunatic asylum.

By a chain of circumstances which could be of no interest to the general reader, I determined on the last line of practice, much to the surprise of my friends, who tried by evil prognostications and other means to dissuade me from my purpose.

'You really intend to go and shut yourself up in an asylum!' said they. 'Is it possible? Why, if you are not torn to pieces the first month, you will be mad yourself by the second.'

I am afraid an incredulous smile was all the return they received for their earnest solicitations. In vain I urged that asylums were not menageries inhabited by ferocious creatures bereft of all reason, human beings in form only; or that asylums were not bastiles, where people were, without any hope of release, incarcerated, whipped, manacled, and otherwise maltreated; but that, on the contrary, they were hospitals for diseases of the mind, conducted on the most humane and enlightened principles.

It was all to no purpose. All the notions they had of asylums and the insane were gathered from old-fashioned pictures by Hogarth, or from modern sensational fictions.

Any one seized as I was with a desire to see how an institution for the insane is conducted, will enter the asylum for the first time with an almost solemn dread. Here, he supposes, will be found the most wretched of his race, brought together that they may not injure themselves or others; or for the simple reason, that they are unable to cope with the ordinary battle of life, or conduct their affairs; men and women in whom reason is overthrown, and who—many of them at least—care little how and when they are fed and clothed, or what shall be done with them.

As soon as the visitor enters the spacious building, his anxiety will pass away, and his dread will lapse into admiration and wonder. Is this a palace? There are gardens around it, laid out and kept with the greatest care. There is a farm within the grounds, cultivated not only with regard to profit, but to taste. There are workshops, in which many hands are busy, but none are overworked, and from which cheery singing and conversation may emanate. Within the house, there is in all parts perfect cleanliness and tasteful decoration. Not a room is dark, not a passage dismal. The sleeping-rooms are models of comfort, boasting of the latest improvements in spring-mattress bedding, &c.; and the living-rooms, galleries, and corridors, models not of neatness only, but of taste and beauty. In the rooms are bright pictures, flowers, and occasionally aviaries or aquaria. Hard by is a chapel, decorated in a tasteful style; and last, but not least, within the building is a grand recreation-room and theatre. If he follow one of the patients throughout the day, the patient will be found, according to his case, a member of the most perfect social system. He will have given to him, if he can do it, light work at the farm or work-shops. He will be provided with books; and in the case of the county asylums to which I refer, he will be fed and lodged at an expense to the county of about ten shillings a week, in a manner which few of the lower middle-class can command. He will have the best advice in

sickness, the most skilled nursing; and above all, he will find in the Medical Superintendent, who is by necessity a scholar and a gentleman, one ever ready to inquire into and redress, if need be, his complaints.

Naturally, after the house in which they live, the next subject which attracts attention is the patients themselves. In the asylum of which I speak, they numbered about five hundred, of whom rather more were women than men. The cause of this preponderance of females over males is not far to seek, the forms of insanity from which men suffer being on the one hand more fatal, and on the other more transitory, than the forms of insanity from which women suffer. The mental diseases of the latter are less dangerous to life, but more permanent and chronic; the result being that chronic female lunatics always preponderate over male chronic cases—that is to say, speaking generally, men either die or recover, while many women remain permanently insane.

Doctors are not yet agreed as to a thoroughly good classification of the forms of insanity; but people of unsound mind may be roughly divided into two great classes—those who are depressed or demented, and those who are maniacal or violent. It is extraordinary how the idea obtains that patients who are confined in asylums are nearly all of the latter type—raving lunatics, of furious manner and action, dishevelled in dress and appearance. The truth is that the number of such cases in asylums is exceedingly small—perhaps five per cent. of the whole; and instead of the casual visitor seeing howling, violent creatures confined behind gratings or in padded rooms, he sees numbers of people orderly in demeanour and dress, working, reading, or employing themselves rationally in endless ways.

The reader may then ask: 'Why is it that people thus capable of conducting themselves with apparent propriety and self-respect, and who are able to occupy themselves usefully, are confined at all, deprived of their liberty, separated from their friends and the world?' To reply to this, it will be necessary to enter with more detail into a description of the patients.

Many who sit there so quietly, and apparently rational in conversation and demeanour, are liable to epileptic fits, which render the subject of these fits at times one of the most dangerous class of patients, some of the most atrocious crimes known having been committed in the epileptic state. A father has been known to murder a whole household, or kill his wife, or burn his house—acts for which, the moment before or the moment after, he would express the greatest horror and grief. Many such patients are aware when these fits come upon them, and earnestly express the wish to be prevented from doing what they have no earthly power to resist. The violence of these patients exceeds the violence exhibited in any other kind of insanity; their fury is blind; and without any provocation, they will rush at the nearest bystander and tear, bite, or attack him with any implement or weapon they can seize. Dr Sankey records a case in which an epileptic man while in the fields digging was seized with a paroxysm, and, rushing blindly upon an inoffensive patient near, cut him down with the blade of a spade, inflicting frightful wounds, and killing him on the spot.

Let us now look at another and very numerous class of patients—namely, those labouring under fixed or transitory delusions. Some patients, although quite able to do easy housework—able, in fact, to perform the duties of every-day life, and to occupy themselves or engage in games with apparent sanity and propriety—are, when questioned, found to labour under the most extraordinary fancies and ideas, which to any one not accustomed to the insane, appear preposterous and incredible. There is no end to the absurdity and variety of these perverted imaginations. A man will converse with you quite intelligently on the leading article of to-day's newspaper, on the last budget, or railway stock, and then suddenly inform you that his head is made of brass, and that he has no inside—that it has been all burnt out; and no amount of reasoning will convince this man to the contrary. Indeed, there is no more hopeless task than to attempt to convince an insane person of the falsity of his delusions. He believes as firmly in the truth of them as we do that we live; his ideas are the concomitants of strange and altered feelings, which have a real existence; and until these fancies pass away, they are not to be removed by demonstration or argument. Some patients, though in good circumstances, will imagine that they are financially ruined; others, of the most blameless lives, that they have committed sins for which there is no pardon, and that they are eternally doomed.

Delusions are not, however, always of a gloomy nature; on the contrary, in one of the commonest and most fatal forms of insanity, exalted delusions are the leading feature. There are patients exhibiting in countenance and manner a feeling of well-being, a conviction that they were never better in health, and never stronger, although hardly able to place food in their mouths on account of increasing paralysis. Their extravagant notions know no bounds. One will tell us that he is a king, a marquis, or a duke, nay, even at times the Almighty. At one time he is possessed of millions of money and property; at another, he is going to pull down all London to-day, and rebuild it to-morrow. He invents wonderful machines, which will make his fortune; he discovers perpetual motion, or how to square the circle; and imagines that he has been Senior Wrangler at Cambridge half-a-dozen times running. The asylum in which he lives, he imagines to be a regal abode; and the other patients, courtiers and nobles; and, 'last scene of all,' when strength is failing, and he can scarcely stand or raise his hand to his head, he tells us that he can write his name on the ceiling with a five-hundred pound-weight hanging to his little finger.

I may in this connection touch upon a subject of much public interest—namely, the supposed illegal detention of people in asylums. To be shut up in an asylum when of sound mind, deprived of liberty, and separated from the world, would certainly be, in spite of the comforts of modern asylums, a dreadful state of matters; and seeing the powers the law has placed in the hands of medical men and magistrates, it is only natural that the public should now and again be concerned even as to the possibility of such an occurrence.

Let us glance briefly at the mode of procedure for the committal to an asylum of an insane person. In public asylums, the question of the illegal detention of parish patients has never arisen, so we need only refer to the admission of private patients to private asylums. The remarks I am about to make apply to English asylums and the English Lunacy Law, which, however, differs from the Scotch chiefly in not requiring the signature of a public judicial officer such as the sheriff. The Lunacy Law enacts that before any one can be taken to or confined in an asylum, he shall be examined as to his mental condition, separately by two medical men, who, if they find him insane, will make a written statement to that effect, showing distinctly and decidedly the grounds on which they form this opinion, on a printed form termed the *Certificate*, issued by the Commissioners in Lunacy in accordance with the Act. This, together with a form filled up by the nearest relative of the patient, is sufficient legal warrant for his removal to an asylum. If a person be only partially insane, and rational on many points, but, let us suppose, the subject of some delusions, such as one will not believe that he is insane, will refuse to believe that his perverted ideas are delusions, and in consequence feel himself grievously wronged in being deprived of his rights and liberty. It is useless to attempt to convince him that he is insane; and therefore, by means of letters and other communications with the external world, which asylum officials have neither the power nor the desire to intercept, he will give himself out as a martyr to villainous legislation, which makes it possible that he, a free British subject, should be so shut up; and hence in a great measure arise the prejudice and outcry against asylums. He may write perfectly rational letters, and display no mean intellectual power in their construction, and yet his relatives with whom he has lived, and the asylum physicians who see him constantly, aver that he commits extraordinary acts, and that he is quite unfit to manage affairs in his house or business, on account of these delusions. They may even fear him carrying into execution threats of injury to himself and others, rendering living with him intolerable, and his removal necessary.

Herein lies the great difference between diseases of the body and diseases of the mind. In the former, as a rule, the patient will be aware that he is ill, and seek for and submit to treatment; but when his mind is diseased, he refuses all ministrations, looking at them in the light of insult and injury. Again, the reader might ask: Could such a case not be managed at home, without his having to undergo the odium and stigma attendant upon being classified as a lunatic? I answer: No; because such a patient is often the responsible head of a family or business, and not only does he prove detrimental to himself by his insane acts, but he involves the honour of his profession or business, and the happiness of his family. These cases become more and more difficult to deal with in inverse proportion to the amount of mental aberration; that is to say, when the delusions are not well marked nor very demonstrable; for there are many undoubtedly insane, whose insanity it would be extremely difficult to establish to the satisfaction of an opposing counsel in a court

of law, where the examining barrister may only have had one short interview with the patient, and made up his mind that his client was of sound mind.

The consideration of these points leads up to the question: Supposing such a patient recover his reason, is it not possible that, as the law at present stands, our patient may be unnecessarily detained in confinement, especially if his detention be to the pecuniary interest of his custodian? I am quite willing to admit that the Lunacy Law, and, for the matter of that, any other law, is far from perfect; yet, on the whole, its working is most equitable and just. Some time ago, however, public opinion was so strong on this matter, that a special Committee of the House of Commons was instructed to inquire into the question of illegal removal to or detention in asylums. This Committee sat for six months; and ascertained that for the last eighteen years over one hundred and eighty-five thousand certificates had been issued, and persons shut up upon these certificates; yet they did not discover a single instance in which the patient had been shut up without good and sufficient reason. Indeed, there is a reverse tendency in these latter years, namely, to let out asylum patients on the first signs of their recovering. This question is often fraught with extreme difficulty and anxiety to the physician in responsible charge of such cases; and to illustrate my meaning, let me refer to the following sad case, which occurred recently.

A young married man was removed to and confined in an asylum on account of homicidal tendencies towards his wife. After a short sojourn in the — Asylum, he showed signs of convalescence, to the great delight of his relatives, and particularly his wife, who at once began to crave for his discharge. This the superintendent refused, urging that he had not been sufficiently long under observation to warrant him in discharging him as 'recovered.' The wife, not satisfied with this, went to the higher tribunal—to the Commissioners in Lunacy, who intimated that they would inquire into the matter; which they immediately did, getting in the first instance a Report from the Medical Superintendent of the asylum where the patient was placed. They advised the wife to delay, to wait until recovery had been more thoroughly established before demanding his discharge. Still dissatisfied, however, and impatient, she applied to the Home Secretary, who in turn referred her to the proper authorities, the Commissioners in Lunacy. At length, nothing would satisfy her but his immediate discharge, which the Superintendent reluctantly acceded to, under protest. What was the result? He was the means of his wife's death the very night he was discharged.

Now, what does such a case—and there are many such—teach us? It teaches us, as Lord Shaftesbury, the noble and enlightened chairman of the Lunacy Commission has pointed out, that those who are in charge of the legal and medical duties in regard to lunacy must consider not only the interests of the insane but also the interests of the public: that they must be very careful indeed how they hastily discharge

and let loose on the public persons whom they are not quite certain have been restored to the power of self-control. Further on, referring to the work of asylum physicians, he continues: 'Indeed, I can conceive nothing more sublime and more Christian-like than the nature of their labours; and though there were in former times great instances of cruelty and abuse, my experience, extending over fifty years of the various asylums, private as well as public, is not only eminently favourable to the highest order of intellect, but to the truest and deepest sentiments of humanity towards the poor creatures placed therein.'

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER XLI.—'MOTHER,' SAID GERARD ON THE EVENING OF HIS RETURN, 'I AM GOING ABROAD.'

NEXT day, Gerard and Hiram were in London. The master stood with a little scrap of newspaper in his hand, on the hearth-rug of a cheerless room in an hotel; and the servant watched his countenance furtively, and drew but little comfort from it. Snow had fallen in the streets, and the sky was leaden and cheerless. The hotel was far-away East, out of Hiram's knowledge of town; and he was all curiosity to know what was afoot, and fear lest the enterprise should be dangerous for Gerard. For Hiram firmly believed that the young fellow had bent himself to have revenge upon the man who had wrecked his life; and though he would willingly have looked on at any such ceremony as a horse-whipping, he feared that no such vengeance would satisfy Gerard.

'Search!'

'Sir?'

'Bring me my overcoat, and wrap yourself up well. It's a bitter day.'

'More snow, I think, by-and-by,' said Hiram. The statement about the weather included almost every unnecessary word Gerard had spoken to him for at least a week, and he was hungry for conversation. His overture met with no answer, however, and he retired. 'Might as well valet a dumb man,' reflected Hiram, 'and be deaf and dumb myself.' Master and man prepared to face the cheerless streets. 'Come with me,' said Gerard; and set out, Hiram following. He walked briskly eastward, pausing at times to make inquiries; and after a journey of perhaps a mile, stopped before a pair of great wooden gates, and rang a bell, the handle of which nestled in the wall, almost hidden by finely-powdered snow. Behind the gates there was a great clanging of hammers on resounding iron; and when the small doorway in the gate was opened, Hiram, looking through, saw a boiler-maker's yard, and men at work there, vigorously. 'What on airt,' said Hiram to himself, 'brings the boss to a place like this? Is he going to cure himself with business? Best thing he could do.' Gerard asked a question of the man who opened the gate. His follower was deafened by the noise of hammers, and caught neither it nor the answer; but pursued him across a slushy yard with tracts of melting snow in it, to a counting-house which stood beside a dry dock. Here a grimy personage

received them, and in answer to Gerard's inquiry for the principal, indicated himself.

'You have a yacht for sale or hire?' said Gerard.

'Half-a-dozen,' said the grimy principal.

'A steam-yacht, iron-built, *Channel Queen*?'

'Yes; for sale or hire. Selling price, eight thousand. Hire—crew included—hundred and twenty a month.'

'Can I see her?' asked Gerard. The grimy personage rang a bell; and a grimmer than himself answering the summons, he nodded sideways at Gerard, jerked out 'Show *Channel Queen*,' and disappeared. The new-comer led them into the yard. Snow had begun to fall again, and the place was indescribably dreary. Hiram's thoughts were in keeping with it; but there was one comforting reflection in his mind. 'He means to take me with him,' he thought; 'and he'll have to get over my body to do it when the time comes.' Two minutes' walking brought them to the side of Thames, and the grimy man raised his voice dolefully, and called a wherryman, who stood smoking and watching the dirty tide of the river, a hundred yards away, with his back against a sheltering mass of timber. The man hurried up. 'Show *Channel Queen*,' said the grimy guide, and retraced his steps. The wherryman grunted, and unfastened a boat which swung at the shiny and rotting piles upon the edge of the river. Gerard and Hiram seated themselves, and the man pulled across the river.

'Do you know the *Channel Queen*?' asked Gerard as they went.

'Know her,' said the boatman, with a gratuitous execration; 'why shouldn't I know her?'

'Is she a fast boat?'

'Fast? Ay; she's fast enough. There she is. Look at her. Did y'e'ver see a boat with them lines on her as wasn't fast? Not you. Nor me neither. Screw, *she* is. Engines is a bit too powerful. Jolts her like, when you drives her hard, her engines does. 'Eadachy sort of craft to travel in; but'—with other verbal gratuities—'can't she walk!'

'Can't I go on board her?' asked Gerard.

'Who said you couldn't?' inquired the man ungraciously; and pulling nearer, caught a hanging chain. 'Up you get,' he said with a grin; 'nobody's a-hindering of you, mister.' Gerard seized the chain, and with some damage to his gloves, went up hand over hand, and swung on to the deck. 'Tain't the first time he's been aboard a yacht, I know,' said the boatman, turning on Hiram. 'Navy, maybe; eh, mister?' Hiram made no answer, but listened to the hollow footsteps of his master on the deck, until he lost them. After a pause of perhaps five minutes, Gerard came to the rail of the vessel and called him: 'Come up here, Search.'

Hiram went up the shallow side like an exaggerated monkey, and the boatman looked after him. 'Reg'lar old salts the pair of 'em,' he said; and having knocked the still burning ashes of his pipe into the brim of his hat, nursed them carefully from the wind whilst he refilled, tilted them back again, and smoked on contented.

'Do you know anything about this kind of thing, Search?' asked Gerard, stamping a foot on the deck.

'I've knocked about 'em a bit,' said Hiram.

'I was stoker aboard one o' the *Messagerie* vessels for a year; an' steward's man aboard an Atlantic steamer for three v'yages. It stands to reason I looked about a bit; but I ain't a connsure.—Hello, what's that?' A head appearing above deck startled the usually immovable Hiram.

'Man cleaning engines,' said Gerard, who had caught the infection for that verbal economy which seemed to live about the *Channel Queen*. 'Come and look at her.'

They went over the little vessel together, Hiram making observations here and there, Gerard dumb again. When they had inspected every part of her, they left, and were pulled back across the river; and the wherryman, richer by half-a-crown, returned to his sheltering heap of timber. Gerard led the way to the office, and entering, said briefly: 'I can have *Channel Queen* examined, I suppose?'

'When you like.'

'When can she sail, if I take her?'

'When you've got crew aboard and fires up.'

'Do you provision crew, if I hire her?'

'No; you do.'

'Good-morning,' said Gerard.

'Good-morning,' replied the grimy man, and shot away again.

Away once more plodded master and servant through the miry streets, the former inquiring here and there as before. This time their wanderings ended in an office, where, for the consideration of a ten-pound note, a gentleman undertook to examine the *Channel Queen* and to report upon her seaworthiness and general capacity. Next Hiram was sent off in one direction with orders for stores, to be held in readiness for immediate delivery; whilst Gerard went another way on a like errand; and so the whole day passed busily. The next day was dull and idle; but on the next a perfectly satisfactory report of the yacht having reached him, Gerard hired her for six months, paid a deposit, left references, and in great haste travelled homewards. During all this time, Hiram had felt quite clear about his master's purpose, but had puzzled himself a good deal to divine the reason which had set him so suddenly upon it, after having rested quiescent for more than half a year. The explanation came, by an unlooked-for source.

'Mother,' said Gerard on the evening of his return, 'I am going abroad.' He had always been fairly accustomed to his own way; his father's 'Very well, my lad,' having been ready in answer to most of his proposals; and latterly nobody had questioned his comings and goings.

'Not for long, I hope?' said Mrs Lumby.

'No,' said Gerard; 'probably not for long.'

His mother would not enter any protest against his going, but it cost her a pang for all that. Gerard's manner was not encouraging to hope, and she believed that he was but going away to brood above his misery; but he was so hard and stern of late, that she did not dare to venture upon any dissuasion. Milly was bolder.

'Where are you going, Gerard?' she asked.

'Where fate leads me,' he answered with a pallid smile.

'You are uncertain?'

'At present; y'es.'

It was in her mind to ask him why he was

going, and she had already framed the words in which to present her question; but he fixed his eyes upon her in a way which seemed at once to anticipate inquiry and refuse an answer. She would not have felt that, but for the suspicion which filled her thoughts. He was going to seek out Val Strange—perhaps to challenge him to a duel in one of those foreign countries in which Val made his shifting home. How could she be sure of this? Not by interrogating Gerard, who would assuredly return no answer. Perhaps by questioning Hiram. She resolved to question Hiram. Milly had a little bower of a sitting-room—her own—in which in happier times she had been wont to entertain her friends; the scene of many a girlish confidence and frolic. Meeting Hiram in the corridor outside, she summoned him to this apartment.

'Do you know that Mr Gerard is going abroad?' she asked.

'I believe he is, miss,' responded Hiram.

'Do you know where he is going?'

'Well, I can't truthfully say I do,' he answered.

'Do you know why he is going?' she demanded. There was an anxiety in her manner which Hiram fully shared. He seemed to see ahead a worse trouble than had yet fallen upon the House; and though he was but newly in its service, there was no man who ate the bread of the Lumby's who was more devoted to them than he.

'Wall, miss,' he returned tentatively, 'I am not in Mr Gerard's confidence, up to now.'

Her woman's wit and native penetration told her that his suspicions clashed with hers. 'Mr Search,' she said, standing before him with pale face and clasped petitionary hands, 'may I trust you?' She did not think of her own attitude, or of the appeal in her voice; but taken together with his own fears, they touched Hiram profoundly.

'Miss,' he said, 'you may safely trust me with your life.'

'You know the whole miserable story of your master and—Mr Strange?'—He inclined his head gravely.—'I have heard,' she went on, 'the circumstances which induced my cousin to take you into his service'—Hiram waved a deprecatory hand at that allusion, and his sallow cheek flushed a little—'and I believe you are attached to him.'

'That is so, miss,' said Hiram with preternatural gravity.

'At that wretched time,' said Milly, 'one of our fears was that Mr Gerard would attempt some terrible revenge upon Mr Strange.'

'That was my idea tew,' he answered.

'And now the same fear returns,' she said with a face of pallor.

'Miss,' said Hiram, 'excuse me. I should go with you, if it wa'n't for one thing. He's kept as quiet as a winter dormouse for half a year. Why should he fire up now, without anything to set a light to him?'

'There is a reason,' said Milly in response.

'Mr Strange and his wife are living apart from each other.'

'He knows that?' inquired Hiram.

'He knows it,' she returned. 'Mr Strange is sailing from place to place in the Levant, and

his wife is living at Naples.' At that news, a sudden certainty shot into Hiram's mind, and declared itself so plainly in his face that Milly saw it at a glance. She made a step towards him. 'What do you know?'

'There air circumstances,' said Hiram, with deliberative slowness, 'when the or'nary rules of honourable conduct must be set on one side. I think this is one of 'em. I ain't pledged to silence, but that's *no* matter. Has Mr Gerard Lumby told you, miss, that he's hired anything in London city, lately?'

'No,' she answered, half bewildered.

'Well, he has.' He paused again. 'He's hired—a yacht; and he's goin' to sail in her'—

'In pursuit of Valentine Strange!' she cried. 'Oh, Mr Search, this must be prevented. Think,' she said, twining her hands together, 'of the misery it will bring upon us all—his mother, his father, all who value him.'

'I'm afraid,' said Hiram, deeply moved by her distress, and sharing in it, 'it'll be about as useful to try and turn him as it would if he was St Paul's Cathedral.'

'Have you spoken to him?' she asked.—He shook his head sadly.—'Will you?'

'It ain't any use me speakin' to him,' he responded mournfully. 'No, miss. I might as well throw stones at the Solar System.' He stood despondently for a moment, and then added, but with no great hopefulness: 'You might try him.'

'I *will* try him,' she answered, and left Hiram standing there.

His large dark eyes and sallow features were full of mourning. 'Tain't a spark and out again with the boss,' he said sadly. 'Slow, steady goes the bellows all the time, and he's white-hot to the core. I know the sort. It's British. And an uncommon ugly sort it is to have agen you. Yes, sir.' Then with a sudden change of face and figure, he said: 'Hiram, maybe you'll be wanted yet. Mark my words, young man, and be on the spot when you air wanted. When the time comes, Hiram, you *will* be wanted—real bad.'

THE TARBERT SHIP-CANAL.

BY CUTHBERT BEDE.

CUTTING an isthmus and converting it to a ship-canal so as to be a highway for commerce, is a kind of engineering work for which the present century will be remarkable in the annals of history. By the Suez Canal, M. de Lesseps united the Red and Mediterranean seas; General Turr is cutting the Isthmus of Corinth for the commerce of the Levant; and the Isthmus of Panama may perhaps be canalised after the same fashion. Twelve years ago, the legislature of Massachusetts proposed to make a similar canal, to save vessels passing round the stormy coast of Cape Cod. It is now proposed to do the same with the isthmus of Tarbert, which connects the peninsula of Cantire with Argyllshire, and thus shorten the journey from the Clyde to the north-west of Scotland, and also save the rough voyage round the Mull of Cantire. It is also proposed to do for the Irwell at Manchester what was done for the Clyde at Glasgow—namely, to deepen it so as

to admit the tide, and thus convert Manchester into a seaport town.

The meeting at Glasgow held, in July last, to consider the scheme of the projected Tarbert Canal, was presided over by the Duke of Argyll, and received the warmest and most influential support. The Canal as proposed will be about two miles in length, with a breadth of fifty-six feet, and a depth of eighteen feet at low-water, and will thus be available for the largest vessel at present capable of navigating the Western Loch. It will save forty-five miles to vessels bound from the Clyde to the north *viâ* the Sound of Jura, and forty miles to those proceeding *viâ* the Sound of Islay; and whereas some sixty miles of the present route round the Mull of Cantire—namely, from Pladda to Gigha—is often stormy and dangerous, this risk will be entirely avoided. Glasgow and the other ports of the Firth of Clyde carry on a large trade with the north and north-west of Scotland, the annual clearances in steamers alone amounting at present to nearly five hundred thousand tons, almost all of which may be expected to use the Canal. Weather-bound sailing-vessels will doubtless also avail themselves of it; and with a transit charge of sixpence per ton, a clear revenue of twelve thousand pounds a year may fairly be expected. The cost of the undertaking is still a matter of uncertainty, but two hundred thousand pounds is given as the maximum; and, as the enterprise has met with ready support, an influential Committee elected, an engineer appointed, the preliminary details adjusted, and most of the money subscribed, there seems little doubt that in a year or two the Tarbert Ship-canal will be an accomplished fact.

Those who have travelled by those splendid steamers the *Iona* or *Columba* from the Clyde *en route* to Oban, will remember Tarbert on Loch Fyne as being the last place of call before the steamer reaches Ardrishaig. Few, however, may be aware that this place of call is within half-an-hour's walking distance of an arm of the Atlantic Ocean. The narrow isthmus of Tarbert is, in fact, only sixteen hundred yards from high-water mark on the Eastern Loch (Loch Fyne) to high-water mark on the Western Loch (Atlantic), and its highest point is only forty-seven feet above the sea. The length of the peninsula of Cantire is forty miles, with a breadth from ten to twelve miles; and the southern extremity, or Mull of Cantire, is only twelve miles from the Irish coast. The steamers that sail from Glasgow to the Western Isles have to encounter the stormy and perilous passage round the dreaded Mull, causing great risk and loss of time, all which, as we have already hinted, would be obviated by the ship-canal at Tarbert. East Loch Tarbert, which opens on to Loch Fyne, is distant forty-four miles from Greenock. Its small harbour, about a mile in length, is very commodious and landlocked, having at its farther end the town of Tarbert, with large quays, so that vessels can approach the shore in deep water. At present, horsed vehicles take passengers and goods from the steamer in the East Loch, to the pier at the head of the West Loch, where the Islay steamer will convey them to Port Ellen. The West Loch is an arm of the Atlantic, eleven

miles in length, and about a mile in width, with a clear channel nearly to its head, for vessels drawing eighteen feet of water. The island of Gigha protects the entrance of the Loch from south-west gales; and the silvan scenery of this Loch is in fine contrast to the rugged rocks of the Eastern Loch.

The wonder is that the Tarbert Ship-canal was not made many years ago, its advantages being so obvious, and its construction having been demonstrated to be both practicable and paying. The low ground to be cut through consists chiefly of micaceous schist covered with moss; and as the water on each side is landlocked and sheltered, the operations in cutting the canal will not be subjected to risk from tidal waves. The engineering difficulties are thus by no means formidable. A century and a quarter ago, the project for a ship-canal at this place was seriously debated. The celebrated James Watt was requested to examine and report upon the project; and, on December 21, 1771, he sent in a statement to the Commissioners of Highland Roads and Bridges, giving his views of the feasibility of the undertaking, and handing in two estimates, the one for a canal sixteen feet deep at neap-tides high-water, to cost—according to the curiously minute estimates furnished—one hundred and twenty thousand seven hundred and eighty-nine pounds nine shillings and fivepence; the other for a canal twelve feet deep, to cost seventy-three thousand eight hundred and forty-nine pounds two shillings and ninepence. Neither of these plans was accepted; but, through the powerful influence of John, Duke of Argyll, and the Marquis of Breadalbane, the shallow Crinan Canal, farther north, was commenced in 1793 by Sir John Rennie, assisted by Captain Joseph Huddart.

The non-eligibility of the Crinan Canal, as a means of transit for vessels of deep draught, redirected attention to the isthmus of Tarbert; and, in 1846, an Act of Parliament was obtained by a joint-stock Company to make a ship-canal at Tarbert, that should be fifty-six feet wide, and have a depth of eighteen feet at low-water. Mr Gibb, of Aberdeen, was the engineer; and he estimated the expense at one hundred and forty-seven thousand nine hundred and fifty pounds; which included the deepening of the West Loch, the improvement of the Eastern Harbour, and the erection of two lighthouses. The Company, however, was dissolved; and Mr Gibb's plans were not carried out. In the following year, 1847, Captain Sir Edward Belcher, R.N., and Lieut.-colonel P. Yule, R.E., were specially appointed by government to examine and report on the merits of the proposed Canal, and their opinions were most favourable to the project. Lieut.-colonel Yule's estimate of the expense was a little over one hundred thousand pounds sterling; and he concluded his Report with these words: 'When a work of this nature, formed in a rock by mere force of labour, is once completed, it will be liable to no accidents; it will not require science to execute it, nor much money to keep it up; the lock-gates and their pliers alone will be liable to deterioration by time.' Sir Edward Belcher afforded most valuable testimony to the great importance of the Tarbert Canal in the naval defence of Great Britain. He said: 'In a military point of view,

this channel affords most important advantages to the naval defence of the western ports of Scotland. In the event of war, some naval rendezvous, as well as coal dépôt, must be formed in the neighbourhood of the Clyde. The enemy would, doubtless, have cruisers watching the Glasgow, as well as the Irish trade. We will suppose the enemy's cruisers caught by a westerly gale between Ireland and the Mull of Cantire, and that the fact of his being there is conveyed to our cruisers in the Clyde; before any of our steamers could reach or pass the Mull of Cantire, even if she could face the gale as well as the sea, she might, by adopting the Tarbert Channel, pass with ease, in smooth water, to the southern point of Islay, in a state of efficiency, seek the enemy to leeward, and prevent escape; or, should her services be required on the northern coast of Ireland, her arrival by this route would be certain, when it might be impolitic, if not impossible, to attempt it from the Clyde direct.'

In the Report of the Tidal Harbours Commission for 1847, the advantages to be derived from the Tarbert Ship-canal are summed up in most favourable terms. 'There may be some difficulty arising from the difference of the levels of the tide on the east and west sides of the peninsula, said to amount at times to twelve feet, which it is proposed to guard against by placing a pair of flood-gates at each end; but it is to be hoped, when the work comes to be carried out, no practical obstacle will be found in making a thorough open cut, and that it will be wide enough and deep enough to admit, at all times of the tide, the largest war-steamer or the heaviest merchant-vessel, that either can now, or will in future, ascend the Clyde to Glasgow Quay. In the eastern part of Scotland, large sums of public money have been expended upon roads and bridges; and the testimony of all observant persons is unanimous as to the advance in civilisation, in comfort, and in wealth that has immediately followed in the wake of such improvements. But in the western districts of Scotland, and especially in the county of Argyll, the rivers, lakes, and sea are now the means of intercourse; and the very barrier that mainly prevented communication in the days of our fathers, has proved to be the great highway in our own. Steamboats are at once the heralds and the cause of every kind of improvement in the Highlands and Islands of Scotland. Independent, then, of the advantages of such a communication in a military point of view, every facility that can be given to uninterrupted intercourse, and thereby to the spread of civilisation, cannot but be hailed as a national benefit.'

The project of the Tarbert Ship-canal, however, again slumbered for several years; till 1861, when Mr John Ramsay, of Port Ellen, Islay, read a paper before the British Association on 'The Proposed Canal at Loch Tarbert, Argyllshire.' He spoke of it as being advantageous from every point of view; and said that 'it would, in effect, bring the numerous western islands and all the west coast of Scotland north of Cantire, sixty miles nearer to the markets to which all their produce is conveyed, besides avoiding a voyage round one of the most dangerous headlands, through the most

tempestuous sea which can be encountered anywhere on the coast of Great Britain.' A meeting of West Highland proprietors was held at Salen, in Mull, on July 19, 1861, when this revived project of the Tarbert Canal was most favourably discussed. Nothing practical, however, came of the meeting. A railway was also projected to cross the isthmus; but this also has not been carried out, though telegraph wires were taken across some fifteen years ago.

It does not appear, therefore, from the various testimonies here quoted, that there would be any special practical difficulty to be surmounted in cutting a ship-canal through the narrow Tarbert isthmus, and thus bringing the Clyde into an easier, shorter, and safer connection with the north-west of Scotland than can now be obtained by 'rounding wild Cantire.' Those words from *The Lord of the Isles*, remind us of Bruce's boat-carrying over the Tarbert isthmus, in which he imitated Magnus Barefoot, and in which example he has been followed by many herring-fishers, who have hauled their boats over the dry land to escape the perils by water at the Mull. In fact, by the aid of laying down poles for their keels to pass over, various craft have been dragged across the isthmus.

Let us hope that the Tarbert Ship-canal will speedily pass from the shadowy realms of project into an actual and accomplished fact.

MY NEW FRIEND.

IN FOUR CHAPTERS.—CHAPTER III.

As the reader may suppose, I was in feverish expectation of a summons to wait upon Messrs Bunner, Wreggs, and Carrowble—the firm for which Mr Scate was acting—hour by hour, almost minute by minute; but the business took a very different turn. Mr Scate called one day, out of the time at which he usually paid his visits, which was generally in the evening, and said that the firm would not trouble me to call; they were quite satisfied, he said, with what they had heard from him; and not caring to multiply the agents with whom they dealt directly, preferred to consider my transactions as a branch of his own. This being the case, he would at once, if I were agreeable, commence our joint work by either seeing people at my house himself, or making appointments to which I should attend.

I could have no possible objection to this, beyond the grave one that I had no experience in buying and selling, and did not even know what kind of goods I was expected to examine. To all this he had conclusive answers. A man 'with his head screwed on the right way,' as mine was, would have no difficulty in picking up such knowledge; while at first he would see everything right for me, and when he was obliged to be away, would leave me instructions how far to go in any purchase. But there! it was making mountains of molehills to talk in that strain. Several interviews of this kind took place; and I could not help thinking that Scate took care never to hold them in the presence of Mr Chelms; and I sometimes actually thought he must lie in wait in the neighbourhood to see the old gentleman go out, so promptly did he look in directly afterwards.

But Mr Chelms was so interested in the matter, so anxious for actual work to begin, he said, that he generally extracted a pretty full account from me; besides holding long conversations on his own prospective share with Mr Scate.

Among other preparations for the agency, Mr Scate had some office furniture brought in; so that, what with a massive table and desk, half-a-dozen heavy chairs, with various racks and shelves fitted on the walls, my front parlour assumed quite a solid, banking, or life-assurance aspect, which met the approval not only of Mr Scate, but of Mr Chelms.

The first transaction which was completed in the new office, took place very suddenly—to me; and was surprising by its brevity and various special features, common perhaps to my novel business, but altogether different from my previous experience. It was conducted thus. At twilight one evening, only a few days after the subject was first broached, for Mr Scate would lose no time in the matter, he came in, and repaired to the office. He had not been there five minutes, when a man knocked at our door and asked for him. It so happened that I opened the door to this person, who, in the few words he spoke, seemed to have an unpleasantly furtive way with him; and although not disguised in any particular manner, his hat was so slouched over his brows, and the collar of his coat so pulled up, that it was impossible to distinguish his features clearly. I showed him into the office, and went down-stairs. As I did so, I thought for an instant that I caught sight of Mr Chelms's face, in the dusky gloom of the staircase, peering over the banisters. I paused to look again; but no one was there, and I went on.

In a few minutes Mr Scate called down the speaking-tube which he had caused to be carried from the office to our sitting-room, and asked me to step up. I complied, and found him with the stranger I had previously admitted; but their figures were barely discernible, as they were sitting without a light, and the twilight had now almost changed to darkness. I naturally noticed this, and offered to procure a light.

'No, thank ye,' returned Mr Scate. 'Our business is finished, and I am going out directly. I wished to introduce you to this gentleman, who will be here again to-morrow, or the next night, and will transact some business with you. Mr—a—Mr'—

'Jerry Wilkins, you know,' said the other, as Scate hesitated.

'To be sure!—of course!' exclaimed the latter. 'Mr Wilkins, this is our new agent, Mr Matley, who will carry on the business at this branch for the present; so you will know who to ask for when I am not here.'

'Yes; I shall know him,' returned the stranger. His words were not a direct reply to Mr Scate's remark, and although I could scarcely see him in the darkness, I felt he was eyeing me narrowly. However, there was little time for this or anything more, as Scate rose from his seat, and in a few words intimated that our business was concluded.

I opened the door for them, and they went out, not exactly together, for Mr Wilkins left at once, while Scate lingered for a couple of minutes on the threshold with me, although he

seemed to have nothing particular to say. As I closed the door, I again thought I saw Mr Chelps, this time at the farther end of our little entrance hall; but it was very dark there, and I might easily have been mistaken. I at once lighted the gas, and went down to our breakfast-room, where I found the old gentleman calmly smoking his pipe in the dark, and by himself; for Susan was absent, making some trifling purchases in the neighbourhood.

I apologised for his not having a light; but, in his usual cheerful manner, he said it was of no consequence, as he liked to sit and smoke in a half-dreamy state, to which twilight, or even darkness, was very favourable. He was chatty on other subjects, but, for a wonder, did not refer to business, which, indeed, was not spoken of until my wife returned. She had gone out just after I had admitted Mr Jerry Wilkins, and so naturally asked me who the visitor was. But even while I told her, Mr Chelps was too much engrossed by his pipe to pay any attention to the subject, or at anyrate to join in the conversation.

Though on various occasions Mr Chelps indulged in a glass or two of grog, it is only right I should say that he never, even at first, gave us the idea that he was an intemperate man. He certainly seemed led away a little by the example of Scate, who occasionally took, we thought, a malicious pleasure in tempting the old gentleman. We did not and could not like Scate, while we both felt favourably disposed to our lodger from the beginning.

The next day Scate came early, and had a brief interview with me in the office. His object was to say that Mr Wilkins would probably call that night, and if so, would bring a parcel, of which I was to take charge, and for which I was to give him forty-five pounds. This money he gave me, all in gold.

'Am I to examine or check the goods?' I began.

'O no,' he said; 'it is all settled about them. We know Jerry, and have done many bits of business with him, so we can trust him.'

'Will you give me a receipt for him to sign,' I asked, 'or will he draw one up?'

'Receipts don't signify between people who can trust each other,' he replied.

'Why, you do not mean to say you are going to pay all this money without a receipt?' I exclaimed in amazement; for such a proceeding was horribly opposed to all my experience.

'Yes, with Jerry,' he returned carelessly; 'it's our way. You will get into it soon, old fellow, and when you come to know your customers, you will deal with them accordingly. By-the-by, you may let old Chelps know that you have begun business; you may show him the money, to let him see that it's a real thing; but don't let him be in the room when you pay Wilkins. In fact, he had better not see Wilkins at all.' All this was odd; but as I knew literally nothing of the business as yet, or how the unseen firm conducted it, I could not say anything against it.

Mr Scate added one piece of information this day which was welcome. He said that my engagement would be considered to commence from this date; that a rent would be paid for

the use of my office, the amount of which would depend upon his report; and upon his report also, to be sent in at the end of four weeks—when I should be introduced to the firm—it would depend whether I was paid by salary or commission. 'And you may rely upon my report saying the best it can for you, old fellow,' he continued. 'I could have got this settled at once; but I know what our principals are, and I am confident that to wait a bit will make a difference of fifty pounds a year to you; so you can draw on me for five, or ten if you choose, while the month runs on, and pay me at your leisure.'

It was impossible not to feel grateful to a man who did so much for a stranger, and who was so perfectly disinterested; yet—although I hated myself for allowing such a feeling to exist—I was conscious, even while I was thanking Scate, and thanking him sincerely—I was conscious, I say, that I was gradually growing almost to detest the man, my benefactor though he was.

Scate did not come in again that day; and I took the first opportunity of telling Mr Chelps what my instructions were; showed him the money, as suggested; told him that I was now fairly in the employ of the firm; that I was to be introduced to them in four weeks' time, and that my pay would be settled on such a scale as the report of Mr Scate justified. He asked me, after a moment's reflection, what the address of the firm was. I told him that I had asked the same question of Scate, who had replied, that I had better postpone all inquiries till the month was over; they would prefer it.

'Ah, I see,' said the old gentleman. 'Until that time, you are, as one may say, on probation. Very cautious of them, very, not to allow Mr Scate even to reveal their address till then.—But I like them all the better for it, sir; I do, indeed. Now, if I get my money in a few days, I may hope—as Mr Scate holds out the most favourable expectations to me—to be introduced at the same time as yourself. I should like that, because, of course, I should not invest without knowing something of the people, no matter how high my opinion of Mr Scate might be.'

I agreed with the old gentleman that he was quite right in this.

A man went by with plants in a barrow that afternoon, and Mr Chelps declaring—rather to my surprise—that he was an enthusiastic admirer of flowers, bought a number, which he told Mrs Matley—who really was fond of them—he would plant in the front garden after the sun went down. He was as good as his word too, or nearly; for he went into the garden with spade and water-can, and slowly—for it was plain he was not an expert gardener—commenced his work. I offered to help him; but the old gentleman said that half his pleasure in shrubs and flowers would be lost unless he planted them himself; so he went on until it was almost dark, making, however, but little progress.

It was between twilight and dark when a cab stopped at our gate, and a knock following, I went to the door, expecting to find—as it proved—Mr Jerry Wilkins. I had lost no time in answering the knock; but Mr Chelps was already in conversation with the visitor, and inviting him, as I could hear, to admire some beautiful

bulbs he was holding out for his inspection. Mr Wilkins, who had struck me as being of a somewhat morose turn when I admitted him on the previous evening, looked gloomier and sulkier now. He turned with a very uncivil grunt from the garrulous old gentleman, and came in the moment I opened the door. Mr Chelps, however, smiled with imperturbable good-humour, but, as it was too dark to see any longer, gave up his gardening for the night.

'You are not an enthusiast in flowers, Mr Wilkins,' I began. 'I am afraid you did not see any particular beauty in the bulb which Mr Chelps so greatly admires.'

'Beauty, no!' said Mr Wilkins. 'What do I want with a thing as looks as if it was pulled out of a rope of onions; and very likely was. He's an old fool.' And yet Ned Scate is going to do business with him, isn't he?'

I could make no reply for the moment, the man's vulgar familiarity, and his knowledge of Scate's plans, so thoroughly staggered me.

'But a regular fool will suit Ned Scate better than anything else, especially if he has a good opinion of himself,' continued Mr Wilkins not heeding my silence.—'Well, governor, there's the stuff, and I want five-and-forty pounds of you.'

'Yes,' I said; 'Mr Scate told me I was to give you forty-five pounds; and as for a receipt'—

'Well, then, hand over the cash, and let me step it,' interrupted the man. 'What's the use of keeping the cab at the door? Ned Scate never told you to ask for a receipt, I know.' A moment's pause here, while he rapidly ran over the gold. 'All right, governor. Will you come to the corner and have a glass?—You won't? Well, that's your business. Mine is to clear out; so good-night.' Saying this, he went, leaving me with a growing feeling of dislike to the 'agency,' with which indeed I had never been greatly enamoured.

Mr Chelps, who, as he explained, had gone out for a short stroll, returned soon after Wilkins left, and joining Mrs Matley and myself, began what promised to be a long, as it was certainly an unconnected account of his gardening experiences in the country; but ere he was fairly in the midst of his narrative, a knock at the street door was heard; and, to my astonishment, Lizzie brought down a message to the effect that a gentleman wished to see me at the *Three Bells*, a tavern in the next street. It immediately occurred to me that it must be that dreadful Wilkins, who wished to transact some fresh piece of the most irregular business in which I was engaged, and this was perhaps his way of managing it. I hurried off accordingly, Mr Chelps saying he would smoke a pipe in the front garden until I came back, so that he should be out of the way while Mrs Matley and Lizzie prepared the supper.

I hastened away, as I have said, and went into each compartment of the bar at the *Three Bells*, which was a large place, without seeing Wilkins or any one that I knew. On my looking for the second or third time into the most select division, where I had naturally expected to find him, a big, square-built man, a customer who was leaning against the bar, said civilly: 'Are you looking for anybody, sir?'

It occurred to me that this after all might be the sender of the message, so at a venture, I replied: 'Yes; I am indeed looking for some one; but the awkward part of it is that I do not know who I am looking for. A lad came to my house, and said a gentleman wished to see me here; but I think there must have been some mistake.'

'I am sure there is!' exclaimed the stranger. 'What a pity it is you cannot get the simplest thing done in a straightforward manner. I sent a boy with that message to an old acquaintance.—May I ask where you live, sir?'

'No. 9 Victoria Louisa Terrace,' I replied.

'The young idiot!' said the stranger. 'I told him a totally different number. It is evidently through me you have been brought here, sir; and though I did not come myself, I must apologise for the utter stupidity of my messenger. You must have a glass of something with me.'

I tried to decline this; but the stranger was clearly one of those who think nothing is complete until ratified by the wine-pledge, or what serves in modern life for the wine-pledge; so I had to stay and assure him of my completely excusing him, and listen to his repeated apologies over a glass of ale, before I could get away.

I found Mr Chelps leaning over the gate, and smoking tranquilly. When I told him of my adventures, the old gentleman laughed heartily. I thought business was concluded for that evening; but at the very last moment, just indeed as we were going to bed, Scate came in for the parcel left by Mr Jerry Wilkins. I went with him into the office, where I experienced a momentary 'turn' by not being able to lay my hand upon the packet in the dark, which I made sure I could have done. On procuring a light, however, I found I had merely made the mistake of supposing that the parcel was on a chair to the right of the door, when in reality it was upon one to the left.

'I shall be round early to-morrow,' said Mr Scate, 'as, since I saw you, I have had a foreign letter, which you must answer. It is from Belgium, and will lead to a great deal of business. You understand French, I believe?'

I said I had a fair knowledge of that language.

'That's a good job,' continued Scate. 'It has been a staggerer to me over and over again, the not knowing anything of the *parlyvoo* jargon. This will be a big transaction, you will find.—And I say, Matley!'—this exclamation was uttered just as he reached the door, as if it were a sudden thought—'just sound old Chelps about his money. If he can get it in two or three days, it will be just in time to make such a profit for him as he never got in Australia, or wherever he has been. Tell him *that*; and tell him that afterwards it may be too late. I will come round and see him myself as well.'

He went rapidly away with the parcel; and I had a long talk with my wife, before I went to sleep that night, upon the singular features of the employment on which I had entered; and we half decided that unless I saw the principals at the end of the month, and liked them when I did see them, I would not continue the engagement.

I spoke to Mr Chelps in the morning, as desired

about his investment; and the old gentleman seemed anxious not to lose the promised chance, and said that perhaps, by sacrificing a trifle of interest, he might get his money a day or two earlier than agreed, which would be in about a week later. Perhaps Mr Scate could show him a way out of the difficulty. But it was not likely that he should give up all this money without an introduction to the firm, and being well satisfied of their stability, or, in lieu of this, some tangible security meanwhile.

As soon as Mr Scate came, I told him this. He declared he greatly applauded the old gentleman's caution, and asked me to call him down, that we might talk things over. I did so; and Mr Chelms came at once.

'You are naturally desirous of knowing where you put your money, and what it is for, Mr Chelms'—began Scate.

'I am, sir, naturally anxious, as you say,' interposed the old gentleman, feeling for his eyeglass, as he always did when business was the topic of conversation. Securing it at last, he fixed it to his eyes, and looked earnestly, yet with an expression which was ridiculously helpless, at Mr Scate. 'No offence, I hope,' he continued; 'but you see a thousand pounds, or eleven hundred, is a great deal to me; and although I have every confidence in you, yet'—

'No apology, my dear sir,' exclaimed Scate; 'your conduct is strictly business-like, and I will satisfy you. One of my principals, if not two of them, shall wait upon you here, in the first place.'

'Oh, I'm sure I would not trouble them so far,' said Mr Chelms.

But Scate interrupted him, and went on with the same boastful swaggering air: 'They shall come, sir; and you shall arrange then, if you like each other, for a final interview at headquarters. Their references, I may remark, will be to three tolerably well-known establishments—the Bank of England, sir; Baring's, sir; and Rothschild's, sir. Are they good enough?'

'Splendid! Oh! I'm sure,' commenced Mr Chelms; but here his eyeglass fell down, and the interruption gave Scate an opportunity of going on.

'It is possible, Mr Chelms,' he said, 'that the Belgian transaction I have spoken of may be finished before you can arrange with my principals, unless you can have your money at once. In fact, I know this will be the case. Mr Matley, who is luckily a capital French scholar, has written this morning a formal acceptance of these foreigners' terms. They will telegraph to their agent, who will be here on the third day from this with the dock-notes of the goods, which are lying here. I have already seen my principals to-day, and took upon me to say—being anxious to forward your wishes—that I could have your money by that time. Accordingly, as the total required will be sixteen hundred pounds, they handed me five hundred pounds in notes. Here they are.' He pulled out a bulky pocket-book as he said this. 'They are strictly ready-money people, as I told you.'

'What! the Belgians?' exclaimed Chelms, whose eyes sparkled at the sight of the rustling notes. 'And what are their names?'

'I did not mean them exactly,' returned Scate.

'I meant that my people were ready-money men; but so, for the matter of that, are Belgians, especially when they are selling anything. Their names are Delroi, Vianet, and Company. You may have heard of them?'

'Yes; I think I have heard of them,' said Chelms. 'And are all those bank-notes?' His interest in the Belgian firm was evidently small compared with his interest in bank-notes, from which he had never taken his eyes since Scate produced them.

'Yes; fifty tens. Look at 'em!' replied the latter, passing the notes towards the old gentleman, and once again shaking down the eyeglass. 'Well, sir,' continued Scate after a moment's pause, during which the notes had been handed back again, 'you shall have the delivery-order of these goods as security, until you are quite satisfied about my principals; and that is exactly equal to giving you five hundred pounds of their money to hold without any security at all.'

'So it is—so it is!' chuckled Chelms. 'Nothing could be better. I will go into the City, sir, and sell out to-day. My broker will let me have the money in advance if I like. Oh, I can manage all that; and I shall be quite satisfied, especially if I can see one of the firm; I must own I should like that.'

'You shall do so, sir,' answered Scate. 'One of them shall be here to see the completion of the transaction. He will like to do so, being Mr Matley's first piece of business on their account. Then, sir, in his presence, I will give you the dock-warrants, and you will give me eleven hundred pounds. I may say, as between friends, that these things are already as good as sold for two thousand pounds. There's business, sir. Our firm knows where to plant the articles.'

'My dear sir,' exclaimed Chelms, 'it's as good as done. If I had any doubts before, what you now say, and the sight of those notes, have quite removed them, and I shall not be easy now until I have had the pleasure of seeing you and your friend together.'

Mr Scate shook his hand heartily, restored the notes to his pocket-book, took the letter I had written; and then, after a most expressive wink at me, which implied anything but respect for his new partner, he left.

AN AFRICAN ADVENTURE.

Of all the various races of the west coast of Africa, the Boobies, or natives of the beautiful, but to Europeans, fatal island of Fernando Po, in the Gulf of Benin, are among the most remarkable, on account of the difference in the appearance, habits, and manners of these people from those of the races or tribes of the adjacent mainland. Finely formed, with, as a general rule, not strongly marked African-negro features, they voluntarily disfigure—or ornament themselves?—by tattooing on their approach towards manhood—not with the regular lines and figures with which the South Sea Islanders and others adorn their persons, but with deep hideous gashes, which open widely, and leave frightful cicatrices on their faces and breasts. It would appear that those who are most deeply marked with this hideous

tattooing are regarded with the greatest respect by the people of the tribe; and though they seem to live on terms of perfect social equality, it is probable that this disfigurement is in some degree a sign of chieftainship.

In one respect, however, these strange people are less civilised than any other negro race, inasmuch as they go absolutely destitute of clothing. They will sometimes wear old garments, given to them by sailors or others, especially if these garments be showy, but only as an occasional adornment which is irksome to them. The only article of apparel that is constantly worn is a hat, or rather a flat, circular piece of grass-matting, like the crown of a hat, but of larger circumference, which is fixed on the top of their woolly heads, to keep off the fierce rays of the sun. As a substitute for clothing, however, the Boobies—male and female—habitually cover their bodies from head to foot with palm-oil, coloured with a kind of red ochre, which abounds on the island, and which stains the skin, and even the woolly hair, of a bright yellowish red or bronze colour, and gives them the appearance, when standing motionless a short distance off, of so many bronze statues. It also serves the purpose of keeping off the mosquitoes and sand-flies and other venomous insects.

Fernando Po is an earthly paradise to look upon; and though fever is prevalent and often fatal in the settlement of Clarence, the interior, where the native villages are generally situated, is said to be healthy. The island, which is nearly circular, is about thirty miles in diameter, and densely wooded from its shores to the lofty mountain—between seven and eight thousand feet in height, according to estimate—which rises in its centre.

One day, while our ship was at anchor in Clarence Bay, a party of seven or eight was formed by the second-lieutenant, to visit the interior, and penetrate, if possible, to the foot of the mountain. The present writer was one of the party, and we set forth early in the morning immediately after breakfast. There was little difficulty about travelling in mid-day, for our journey would lead us through a dense forest, almost impervious to the sun's rays, the whole distance we purposed to travel. We were recommended to arm ourselves, in case any difficulty should arise, and most of us carried a revolver, concealed of course. We were curious to see the habitations of the natives; for though there were a few negro huts of the ordinary description in the vicinity of the settlement, these were chiefly inhabited by coast negroes, who had taken up their abode on the island, and were hangers-on upon the white residents. The Boobie villages were all in the interior, and we had been told that they were curiosities in their way. It was in the direction of one of the most populous villages that we set forth, plunging into the wood as soon as we quitted the settlement.

Nothing remarkable occurred during the journey, except that we passed several enormous trees of the mahogany species, and saw a few small monkeys, which clung by their tails to the branches of the trees, and swinging to and fro, chattered volubly as we passed beneath them. Neither did we meet a single negro until we

had journeyed three or four miles, when we came upon a party of young men collecting palm-wine in the palm-trees, from which, when they perceived us approaching, they descended with incredible and, as it appeared to us, dangerous swiftness, and scampered off, hallooing to one another, in the direction of the village.

As we walked slowly, it was near mid-day before we approached the base of the mountain; and very soon the chattering of many voices told us that we were near the village. However, we kept on following the direction of the voices, and in a few minutes saw a party of eighteen or twenty men, who came towards us, headed by a man bent with years, who leaned heavily upon a stout stick as he walked. The young men who had run away on seeing us, had no doubt carried the news of our approach to the people of the village; and this deputation, headed by the venerable senior, had come forth to ascertain the object of our visit.

We were in somewhat of a dilemma. None of us could speak a word of the Boobie language; nor could any of the negroes on board, or we should have brought one of them to serve as an interpreter; and except a certain formula of words, which they had learned from the sailors, and which it is unnecessary to repeat—though the old man and some of the others uttered them over and over again, evidently thinking they were greeting us most politely—the deputation knew nothing of English. It was ludicrous to see the poor fellows bowing, and waving their hands in token of amity—evidently doubtful of our object in coming to their village, and deprecating any unfriendly act on our part—and at the same time swearing at us in most approved nautical formula, until the second-lieutenant, smiling, shook hands with the old man and swore at him in return; upon which a general shaking of hands and swearing ensued, and the party seemed satisfied that we had no evil intent in visiting them.

The old man then issued some orders; and several boys appeared, bringing palm-wine in gourds, with cocoa-nut cups to drink it from, and bananas and plantains and other fruits, which they pressed upon our acceptance. We, however, wished to enter the village, which, as we perceived by advancing a few steps, was close to us, and consisted of some dozen small low huts, and a vast number of the large but light bark canoes, suspended, bottom upwards, from tree to tree, beneath which some old men were squatted. We could see neither women nor children, though, when we first drew near, we could distinctly hear their shrill voices in loud outcry. They had apparently taken alarm at our approach; and the men were evidently so unwilling that we should enter their village, though they did not offer to use force to prevent us from so doing, that as we had no desire to offend their prejudices, and, moreover, as we could see all that was to be seen from where we stood, we gave way, and sat ourselves down to rest and partake of the refreshments they had provided. They seemed pleased at this; and after resting awhile, we took our departure, with a mutual exchange of the formula with which our friends had greeted our arrival, leaving the

old man and one or two others, who appeared to possess some authority, highly delighted with a present of old cotton handkerchiefs, a few small silver coins, and a few 'hands' of leaf-tobacco. We returned to the sloop-of-war shortly before dark, and had hardly set foot on board when we saw a double-banked war-canoe approaching the ship from the mainland.

This was an unexpected visit. The 'double-banked canoes' are formed of two huge trunks of trees—generally a species of mahogany—carefully and neatly hollowed out, until the shell, though of great strength, is often thinner than the sides of an ordinary boat. The outsides as well as the insides are smoothed and polished with palm-oil mixed with some pigment; and the hollowing is so contrived that the bow and stern of each canoe are much higher than the centre. The stern and bows are also elaborately carved, the former especially; and the two canoes are then bound firmly together, so that it is almost impossible to capsize them in the roughest sea. The paddlers, from twenty to forty in number, squat cross-legged on the bottom of the canoes, there being no stretchers, except across and around the stern; and the paddles are shaped like small spades, with short handles. Rapidly wielded, with short quick strokes or dips, the paddlers chanting some monotonous song the while, these canoes are forced swiftly over the water. But they are never used except by some high chief going to war or on some important mission.

There were two figures clothed in white in the stern of this canoe, both evidently chiefs, although we had no idea to what race or tribe they belonged, or what was their object in visiting the sloop-of-war. A few minutes, however, brought the canoe alongside, and the chiefs ascended to the ship's deck. Both were tall stout men, and they really presented an imposing appearance in their ample white robes. Our visitors were of a jet-black complexion, their skins shining like polished ebony. Both were good-looking negroes. He who appeared to have chief authority wore a short beard, and his nose, though the nostrils were distended, was slightly aquiline. Their long white calico robes, worn somewhat in the style of a Scotch plaid, reached to the calves of their legs behind, but left the right knee bare in front, while the robe descended a few inches below the left knee. It was doubled across the breast, and one end was thrown gracefully over the left shoulder; and though it had no sleeves in reality, it was so arranged that the arms, bare to the elbows, seemed to be thrust through wide bishop-sleeves, which hung drooping at their sides. Both wore a white head-dress, somewhat resembling a Turkish turban, with a long and flowing flap behind, to shade the sun from the neck. The headman's turban was larger than that of his companion, and more profusely ornamented with gold spangles and strings of cowrie-shells; but each wore heavy gold bracelets and anklets, and a crooked sword or scimitar, without a sheath, attached to a belt round the waist. Their feet and legs below the knees were bare; and as they stood erect—the shorter of the two at least six feet in height—they presented both a stately and graceful appearance.

The chief who spoke English, after saluting

the captain and officers, explained that they had come from the coast to the northward, pointing in that direction, and mentioning some unpronounceable name.

'Me, de king broder,' he went on. 'De king good fren' to Queen Victoria [this name he pronounced correctly]; king and queen should be good fren—dat berry good ting. Den no war. Ebery ting go right. Queen Victoria say hab no mo' slabe. Send him ship for catchem slabe-ship. Makee custom to *coast-king for no sell slabe to bad white fellar. Dat berry good too. But bad king, he takee custom, sell slabe all same. Dat no good. Dis berry time, on de coast dar, t'oder side ob de Cape [meaning Cape Biafra], two ships go takee slabe on board, what king go for sell. Messenger come across for tell de king, my broder. S'pose man-o'-war ship go, makee quick time, den dey catch him bo't—all right.'

The chief mentioned the names of the tribe and king to whom he alluded; but I have forgotten both. Our captain, however, was doubtful whether to act upon such intelligence. That it was true, he thought, was very probable; and it was well known that from no love of Queen Victoria, but from hatred and jealousy of one another, the kings and chiefs of one tribe would inform against another, with the treble object of gratifying their own animosity, affecting a regard for her Britannic Majesty and the treaty, and reaping a reward for the information in case a capture should be made.

It was certainly a great object to capture two slavers; and that the slavers *were* on the coast there was little doubt. The question was, in the first place, whether we should be able to find them—the geographical knowledge of the natives not being very accurate, and whether they would not be off before we could arrive at the designated spot; and in the second place, whether it might not be a ruse to draw us off from the station, that the king and chiefs who professed so much friendship for Queen Victoria, might meanwhile play a little game to their own advantage; such tricks being by no means unfrequent.

'Can I be sure that you are telling me the truth?' said the captain. 'And can I find the river of which you speak, from the vague description you have given, if your information be correct?'

'Tis de truf, sah, captain,' replied the chief. 'Me makee know de coast right well, s'pose me see him.'

'Then you will act as our pilot, and get good "custom," suppose we make a capture?'

Somewhat to our surprise, the chief readily offered to stay on board and pilot the ship, or rather point out the river in which the slavers lay, when the ship should arrive off that part of the coast.

Still suspecting some trick from this very promptness, and thinking it possible that, after all, the chief who had not spoken might be the real headman and the king's brother, the captain insisted that both the chiefs should remain on board, he promising to bring them back again to Fernando Po. This, after some little hesitation, they agreed to; and no longer doubtful, the captain ordered the anchor to be weighed and

sail set immediately. The chiefs gave some orders to their own people, and the canoe was paddled away; and in less than half an hour the ship was under full sail, standing out of the Bay before the land-breeze.

Shortly before dark the next day, we reached the spot indicated by the chief, who pointed out the entrance of a narrow winding river, in which, he said, the messenger who had crossed overland, declared that the slavers were lying. It was necessary to cut the vessels out by means of a night-attack with boats, or to await their coming out of the river and capture them; but then, in the latter case, they would be sure to hear of our presence, and to come out without slaves, and probably laden with some trifling cargo, like honest traders, in which case we could do nothing with them; so, though the former plan was hazardous, it was decided upon.

As soon as darkness set fairly in, the pinnace and first-cutter were armed and manned and despatched up the river, one of the chiefs accompanying each boat. The river was very winding, and so narrow that there was often hardly room to pull the oars. It was evident that the vessels must be small and of light draught, and must have been towed up the river, if they were really there, which we began to doubt. The night was very dark. The shores were marshy in some places, in others lined with dense forest, and as we pulled silently along, the muffled oars making no noise, and no one speaking, save when the officers gave some order in a scarcely audible whisper, while the night-wind sighed mournfully amidst the trees, the scene was dismal enough. For a full hour we had pulled in this fashion, hoping, at every fresh bend in the river, to discover the vessels of which we were in search, yet seeing nothing; and at last the officer in command was inclined to return.

'They have never been here, or they are gone,' he whispered.

'Pull lilly bit more, sah, you catch 'em,' replied the chief.

'I think I see a vessel's masts, sir—there, just against that streak of light in the sky,' whispered the bow-oar's-man, who had been ordered to look out.

'Yes; it is so,' answered the lieutenant.—'Now, my lads, have your pistols ready; but don't fire, unless we are fired upon. Be ready with your cutlasses. The vessels lie in the next bend. We'll pull softly round, and then dash alongside.'

The cutter was in the rear. The pinnace lay by till she came up, and the same orders were repeated to the officer in charge.

Silently we pulled round the point. Every man held his breath, though he panted with excitement. Five minutes more, and we descried the hulls and spars of two long low schooners, scarcely a hundred yards before us. The boats appeared to be unseen and unheard.

'They don't see or hear us,' whispered the lieutenant. 'We'll pull softly up, and board them in the dark. They've no idea that there's a man-of-war on the coast, and we will catch the scoundrels sleeping.'

We were not fifty yards from the vessels, which lay side by side, in a sort of basin in the river, which widened in this spot to a breadth of

forty or fifty yards. The stars had made their appearance in the hitherto gloomy sky, and we could clearly discern the slave pens and huts on shore.

'Hist! hark! What is that?' whispered the lieutenant. 'By Jove! they see us! Look! There is a light on board the starboard vessel. On, my lads! Dash in, with a cheer!' he cried aloud. 'Huzza for prize-money!'

Hardly had he spoken the words, when there came a blinding flash, followed by the simultaneous report of at least a dozen muskets. We heard the bullets plash in the water, like heavy rain; but no one appeared to have been hit.

'On, my lads! No secrecy now. No quarter till they surrender!' cried the lieutenant.

In a few moments both boats were alongside the schooners, and the sailors sprang, cutlass in hand, on to their decks.

'Surrender, in the Queen's name!' cried the lieutenant in command.

'We surrender!' answered a voice, in broken English, which, however, to my fancy, had a very Yankified accent. There was no further attempt at resistance, which, in fact, had been madness, for they well knew the boats would not have made the attack unless they were well supported outside, and resistance to a ship-of-war was punishable by death, while otherwise, the vessels only would be seized.

The prizes were ours; and they were sent to St Helena for adjudication, where they were very profitably sold for the benefit of the captors. The slaves, four hundred and thirty in number, were in the pens on shore, and they were sent to Liberia, and there released, to become denizens of that then new republic.

'How dared you fire at Her Majesty's boats at all?' demanded the lieutenant.

'It was not I, but the fool of an officer on deck,' replied the captain, who, though I veritably believe he was an American, professed to be a Portuguese.

'Lucky for you, no harm was done,' was the reply.

There was mischief done, however, though at the time no one was aware of it. It was determined to send one boat back to the ship, and to keep the other, the pinnace, alongside till daylight, and the crew were ordered out of her. The men had got into the boat again, expecting to return to the ship, and they returned to the schooner, at the command of the officer—all but one. That one was the second chief, who had never stirred from his seat in the pinnace. There he still sat, in his white garb, erect and silent.

'Come up out of the boat!' repeated the officer.

Still the chief never stirred.

'Ask the fellow why he does not come out of the boat!' said the officer to one of the sailors.

The man shook him roughly by the shoulder, and told him to mount to the deck. The hitherto erect body fell over on its side.

'Ah, sir, the nigger's shot dead,' said the sailor. 'There's blood runnin' from his breast, and stainin' his white dress.'

'Is it possible?' exclaimed the lieutenant, hastening into the boat.

A very cursory examination told that such

was the case. Conspicuous in his white robe, the poor fellow, who was in the foremost boat, had made a good mark for the men on board the slaver, and a bullet had entered his breast, killing him instantly.

This was the only casualty we met with in capturing the most profitable prize we secured during our cruise; and as it did not befall one of our own men, it was not charged against the captains of the slavers, who got off with the loss of their vessels and all the property on board.

At the earnest request of the head chief, however, who was deeply grieved at the death of his companion, the body was taken on board the ship and sent back to the country to which the unfortunate negro belonged. The sloop-of-war, however, did not return immediately; and the chief, with the reward he had earned and the dead body of his friend, returned home in another vessel.

SOME MODERN CHANGES.

THAT fashions should constantly alter, is not only an inevitable, but probably a desirable thing; the progressive waves of varying style and usage that are continually passing over everything within the scope of human affairs, from petticoats to politics, are to the world, in preserving it from stagnation, what the tides are to the sea; and however much we may grumble at the eccentricity or extravagance of any prevailing mode, we must remember that habitude makes all things tolerable, and that the fashion which we now dislike to change, and uphold from custom, appeared just as absurd and undesirable to our forerunners, when it superseded something else, as the new one does to us. The consideration of such changes as these, however, not being within the scope of the present paper—it is difficult, indeed, to imagine any paper which would afford scope for them!—we shall glance only at a few of those alterations affecting the minutiae of daily life, which, trifling in themselves, and scarcely appreciable in the individual, when taken as a whole, sometimes serve to mark the strides of civilisation, or even in some instances, the retrogression of nations.

Let us start with that most commonplace object, a tallow-candle—so useful, and yet so vulgar compared with the sperm, ozokerit, stearine, composite, and other beautiful varieties of our own day. Where are the farthing dips and the 'long sixteens' of our youth? Well, we shall breathe no sigh of regret for them; peace be to their ashes, or rather their 'snuffs,' which were malodorous, productive of conflagrations, and exigent of constant trimming. And this last item brings us to the point—where are all the snuffers gone? It is only a few years since the snuffers-tray appeared regularly with the candles at nightfall; now they are never seen, and ten years hence will be as rare and as valuable as Queen Anne's farthings, unless some specimens are preserved in our museums. As modern candles consume their own wicks, snuffers have become things of the past, and the fact of their

desuetude marks an important epoch in the progress of a great manufacture, which, by its exports and imports, not only visibly affects our revenues, but exercises considerable influence in our commercial relationship with the countries from which tallow was derived.

Who now possesses a tinder-box, or one of the old flare-up dipping-match and bottle arrangements? If there be any such among the readers of this paper, we would say with emphasis: Keep them, and hand them down to your children's children, as an heirloom precious above rubies; for when rubies are manufactured by the pound, and original sculptures of Grecian and Babylonian antiquity supplied wholesale by Birmingham houses at so much a ton, these things will be known only in the dim traditions of our race. Blue-blazing, ill-smelling, sputtering, suffocating phosphorus and sulphur matches, in their red and blue boxes, are rapidly becoming engulfed in the abyss of forgotten things too. We have read the details of Messrs Bryant and May's manufactory, of their enormous consumption of wood, paper, metal, and other materials, and are not certain that one species of tree is not supposed by botanists to be approaching extinction, owing to the magnitude of their operations! A watch-key will, after a time, become an interesting curiosity, and be transmitted to posterity as evidence of those dark ages when keyless watches were not in universal use. And what—oh, whatever will future generations think of a warming-pan! already at the present day seen only in the hands of the Clown in Christmas pantomimes, and by him employed as a weapon of offence. Let us trust that our descendants may be oblivious of any other purpose which the hideous article could serve, and that a fossil clown with an ancient warming-pan may be dug up somewhere or other for their edification. For, whatever its utility may have been at a bygone period, is not the survival of such an atrocity now an insult to an age of india-rubber, to a land flowing with elastic hot-water bottles, pillows, cushions, and beds—to an era of æsthetic comfort—to the days of well-built houses, well-fitting window-sashes, impermeable roofs, decent drainage, and damp-excluding doors, of bedroom fires, and eider-down quilts?

Great simplification has been effected of late years in our appliances for writing; but there is room for much more. The most ordinary incident of our every-day business, that of writing a letter, is perhaps more cumbrous and complicated in its necessary arrangements than anything else coming within the pale of that civilisation which, like charity, should begin at home. The pen, the penholder, the ink and inkstand, the blotting-paper, the sealing-wax occasionally, and postage-stamp—surely, it is high time that some of these were consigned to the limbo whither the sandbox has already departed, and wafers are fast going. Stylographic pens are a step in the right direction; but perhaps some better kind of indelible pencil than those which already exist would be more fitted to answer the requirements of caligraphic man.

The snuff-box, with all its historical and classical associations, is doomed, and 'collections' of those articles are even now to be met with in the

possession of people whose particular fancy it is to establish private museums of different things. It is curious to note that the snuff-box, so frequently placed in the hands of their *dramatis personæ* by the playwrights of the last century, and to which they make constant verbal allusion, has but a poor successor in the pipe, cigar, or other accessory of nicotine worship, in the favour of modern writers. The fact is, the use of the box by a skilful actor might be variously rendered playful, cynical, sly, graceful, or statuesque—might, in fact, be employed to interpret many emotions; while the amusing *contretemps* to be extracted from it were innumerable.

Smoking, on the other hand, admits of much fewer phases of expression; and if there is any situation in which the most dignified of mankind appears at a greater disadvantage than when looking in the glass at himself while shaving, it is in the act of lighting a pipe or cigar and squinting at the match. At the same time, we can hardly think that the pipe will ever fall out of fashion among smokers, as the medium through which they derive comfort from their favourite weed; though great changes in form and material may take place. Cigars, also, it may be remarked, are daily coming into vogue to a greater extent than ever. Nor is this gradual increase confined to England alone. Germany and Turkey consume more cigarettes and cigars every year; and a large exporter of meerschaum from the former country assures us that the trade in expensive pipes has decreased nearly one-half during the last ten years, while wood and clay still hold their ground.

The tobacco-trade, possibly, has more mysteries than any other in this age of commercial immorality. It is almost as difficult to purchase a good cigar promiscuously in Havana as it is in London; unless you know the right shop to go to, you are as likely to buy Whitechapel and Bremen abominations, exported from Europe for the purpose, and put up in the most orthodox 'Habana' boxes. In Vera Cruz, you may buy cigars for five shillings a hundred, which the vendors for a few cents extra will pack and label with the name of some famous brand. So they will in Porto Plata or San Domingo. So they used in Brazil; but Bahian and other Brazilian cigars have now made their own name, and have established an honourable claim to be considered amongst the best cheap cigars in the world. It is impossible to get an inexpensive good cigar in Cuba itself; the best brands are never exported, for few people here would care to give half-a-crown or three shillings apiece for their 'smokes,' which the wealthy Cuban—who consumes them soft and green, wrapping them in oiled silk to preserve the flavour—pays on the spot. There is much in a name. Thousands of really excellent weeds are made yearly both in England and Germany from good raw tobacco imported for the purpose; but it would never do to offer them for sale as British or German produce. What a charm lies in the words 'Vuelta Abajo,' to be read on your cigar-boxes! Vuelta Abajo is a small district between Havana and Santiago, consisting of a few acres of land only, now in the possession of two or three of the richest planters in the island; and probably not an atom of the tobacco—noted for its richness—which is grown there finds its way

beyond their own air-tight bladder cigar-pouches, or those of their intimate friends.

Throughout the whole of South and Central America, the Southern States, and in many other parts of the globe, it may safely be averred that the majority of the male population of all classes have a cigarette between their lips during the greater part of their waking existence from childhood upwards. The senator smokes in the Chamber of Debates; the servant smokes as he waits upon you; the shopman does not trouble himself to remove the smouldering rice-paper from his mouth as he answers your queries; the coachman who drives you, the half-clad nigger who blacks your boots, the hunter on the prairie or pampa, and the Indian in the backwoods who rolls his morsel of tobacco in a maize-leaf—all smoke cigarettes. We visited one huge manufactory in Havana which stands out into the bay like an immense mahogany cigar-box itself, where over a million cigarettes are turned out daily. We entered our names in a book, on admission; and when we had completed the tour of the factory, were each presented with an elegant case of cigarettes, every bundle of which bore our respective names, the date, and a complimentary sentence in Spanish, printed in different styles on beautifully embossed labels. There can be no doubt that the introduction of tobacco in this form has greatly increased its consumption in this country. A cigarette is a thing that can be lighted or tossed aside at any time, and often serves to fill up odd intervals of a few minutes; while a pipe, as a rule, demands premeditation, and is indulged in only at regular periods; and a cigar—especially a good one—is rarely commenced by one who can appreciate it, except under circumstances favourable for its full enjoyment and completion.

CHILD SONGS—THE LITTLE PRUDE.

HERE she comes, her nut-brown eyes
Downcast, but slyly peeping.
Oh! beware;
Such a snare
Must never find you sleeping.

She puts her finger in a mouth
Where butter would not melt away,
With an air
As if she were
Much too shy for 'Yea' or 'Nay.'

'How do you do, my little maid?'
(Her silence is so pretty).
'To lose your tongue
Is very wrong,
And to my mind a pity.'

Up she comes to me quite close,
Shoots a glance, that never misses,
With a smile
All the while,
Whispers: 'There must be no kisses.'

PRICE 1½d.

THE RAIN-BAND.

THE spectroscope is one of the most distinctive of modern wonder-workers. In its essentials, it is based on a simple natural phenomenon. When a ray of daylight enters a darkened room through a small hole, it gives an image of the sun on the opposite wall. If a prism—or three-sided piece of glass—is placed, apex upwards, so as to intercept the ray of light between the aperture and the wall, the image of the sun disappears, but is replaced further down the wall by an elongated upright figure, termed the spectrum, and consisting of bands of different colours, beginning with red at the upper extremity, and ending with violet at the lower. These colour-bands are due to the fact that the original ray of white light in passing through the prism has been analysed into the different coloured rays of which such light consists. The spectroscope, therefore, is an instrument by the aid of which spectral phenomena, such as the above, may be studied. It consists essentially of, first, a narrow slit, through which the parallel rays of light pass; secondly, a prism or train of prisms, to separate the coloured or differently refrangible portions of these rays; and thirdly, a telescope, to form a magnified image of the spectrum produced. Newton effected a sevenfold division of the colours in the spectrum above described; and Wollaston and Fraunhofer, at a later period, made great advances in the use of the instrument, especially for chemical analysis, till now it is possible to tell, by the dark absorption lines which the instrument shows interspersed throughout the coloured band, the nature of the gases of which the luminous envelopes of the sun and even the stars consist.

Early in the present century, when Fraunhofer was studying these lines in the solar spectrum, which Wollaston had first observed, he made an important discovery. Examining the sunlight under various circumstances, he found a peculiarity in its spectrum when the sun is near the horizon. He detected the presence of

dark lines, in fact, which are absent in the spectrum of a mid-day sun. Now, a moment's reflection shows us that the sunlight has to pass through a thicker layer of atmosphere when the luminary is close to the horizon than when he is overhead. What more natural than to ascribe the extra lines to this additional thickness of air? Without knowing at that time anything of the nature or cause of the lines, scientific men regarded them as of atmospheric origin.

After the true interpretation of the dark (or absorption) lines had been indicated by various physicists, Brewster and Gladstone, in 1860, again took up the subject of these atmospheric lines—sometimes called the *telluric* lines, because of their terrestrial origin; and in order to demonstrate their existence, prepared a map of the solar spectrum containing more than two thousand of the dark lines. A considerable number of these apparently owed their presence to atmospheric influences. Professor Cooke, of America, next investigated the matter, and found that many of the lines are dependent upon the relative moistness of the air, being stronger when the air is humid than when it is dry. The indications of the hygrometer accordingly showed a marked agreement with the strength of the bands in the spectrum.

In 1864, Janssen revised the whole question. His interesting researches are thus described by Mr Proctor in his little book on *The Spectroscope and its Work*: 'Janssen, using a spectroscope with five prisms, succeeded in resolving the dark bands seen by Brewster and Gladstone into fine lines, and ascertained that these lines vary in strength. They are darkest at sunrise and sunset, and weakest—but never entirely absent—at noon. Observing next from the summit of the Faulhorn, about nine thousand feet above the sea-level, he found that these lines were still further reduced in strength. In order to ascertain whether they are entirely due to our atmosphere, he caused large pine-fires to be made at Geneva, about thirteen miles from the Faulhorn, and observed the spectrum of the flame. As he found that

some of the dark lines were seen which are observed in the spectrum of the setting sun, it was proved that these lines are caused by our own air. To ascertain next what part the aqueous vapour has in producing them, he made use of an iron cylinder one hundred and eighteen feet long, placed at his disposal by the Paris Gas Company. After exhausting it of air by forcing steam through it, he filled it with steam, and closed both ends by pieces of strong plate-glass. A bright flame—produced by sixteen gas-burners—was placed at one end of the cylinder, and analysed by means of a spectroscope placed at the other end. The light, after thus travelling through one hundred and eighteen feet of aqueous vapour, gave a spectrum crossed by groups of dark lines corresponding to those seen in the spectrum of the horizontal sun. Janssen proved, indeed, in this manner that almost all the lines then seen are due to aqueous vapour. To make assurance doubly sure, he extended his observations to the fixed stars, to see if similar lines appear in their spectra. The results of his observations of these spectra accorded well with those he had already obtained.'

No further interest seems to have been taken in the subject until, in 1872, the attention of Professor Piazzi Smyth was drawn to it. Since then, he has been a devoted student of what is termed Rain-band spectroscopy, and has published the results of his observations. In the beginning of September 1882, he based a prediction—published in the *Scotsman*—of a spell of fine harvest-weather upon the exceptional faintness of the rain-band at that time. The prediction was borne out; and its success gave rise to a controversy in *The Times* regarding the predictive value of the rain-band spectroscope. Popular interest having been thus aroused, the importance of meteorological spectroscopy has of late become as greatly magnified as it was before depreciated. The public, too, unwilling to believe that they have so long deprived themselves of a good thing, persist in believing that this application of the spectroscope is a new and startling discovery. To correct the latter notion, we have given a summary of the rain-band's history. To correct the former also, we purpose briefly discussing its real value.

It must be remembered, to begin with, that the strength of the rain-band does not afford any clue to the approaching *weather*, but only to the wet or dry element in it. This statement is here made because not a few people seem to imagine that the spectroscope is to supersede the barometer. It may form a useful adjunct to that venerable instrument, but can never supersede it. The barometer measures *pressure*, the rain-band indicates *humidity*.

As may have been gathered from the description of Janssen's experiments, what the spectroscope really does is to indicate the degree of moisture—the quantity of water-vapour or 'raw material'

of rain—in any section of the atmosphere from the vertical nearly to the horizontal. If there be a great deal of the water-vapour present, there is a presumption that some of it will come down; if there be very little, there is a likelihood of dry weather simply because the rain material is not there. So much is certain. But mark what is uncertain. The rain-band might correctly indicate much water-vapour, yet the temperature conditions which follow the observation be such as to favour continued suspension, and no precipitation (rain) take place for days. The temperature, on the other hand, might suddenly be reduced, and a downpour occur within an hour's time. Again, the wind might bear away the vapour to some other locality, and so prevent any precipitation at all at the place of observation. Then the faintness of the rain-band might show the presence of very little water-vapour, yet the deficiency be quickly supplied by a moisture-laden current of air, with rain following in an hour or two. These chances of error, it will be seen, somewhat limit the utility of the spectroscope as a weather prognosticator.

Still, there is no doubt that in the hands of an intelligent observer, the 'rain-band' has a meteorological value. To expect its indications always to be true, is as unwarrantable as to expect a falling barometer always to mean rain, or a rising barometer always to mean fair—or what we fear to be even a more widely-spread popular error, a *high* barometer to mean 'set fair.' The true meteorological value of the spectroscope cannot be determined until many observations have been made; and the observer must supplement his observations by such considerations as the direction and strength of the wind, its tendency to change or otherwise, &c. There is thus a great deal of work to be done before the importance of the thing can be surely estimated; and those who have the opportunity will do well to help, while those who haven't must wait to learn the result.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER XLII.—'MISTER, THERE'S A SCORE OF LIVING SOULS ABOARD THAT CRAFT. LET GO THE WHEEL.'

MILLY found Gerard alone in the smoking-room. He was not smoking or reading, but simply standing with his hands in his coat-pockets, staring out of the window at the rain. At her entrance, he looked round, but turned back to the window without a word.

'Gerard,' she said tremulously, 'are you quite resolved on leaving us? Can you not be prevailed upon to stay?'

'Why should I stay?' he asked in answer.

She took sudden courage, and advancing, laid her hands upon his arm. '*Vengeance is mine,*'

she said ; ' *I will repay.*'—He looked swiftly down upon her, and away again.—'Gerard, dear Gerard, they are unhappy already. They have parted. Their own consciences were against them. You have suffered enough, but you have nothing to repent.'

'Good-bye, Milly,' he answered very gently. 'My train starts in an hour. I shan't see you again, most likely.' His manner was so quiet, that he might not have heard her words. But the imminence of the danger which she saw so clearly braced her for a moment.

'Gerard,' she urged him, 'do not go upon this journey. Think of your father, and his sorrows. Think of your mother. Or if you will go, promise me that you will not follow—him.'

A curious look crossed his face. 'Did you care for Val Strange?' he asked. 'You weren't in love with him, were you?'

'No, no!' she cried. At another time, such a question concerning any man would have called a blush to her face, but now she scarcely noticed it. 'Promise me! you will not follow him.'

'Good-bye, Milly,' he said again, as gently as before. But she clung to him with tears, and would not let him go.

'Stay!' she pleaded passionately—'stay! For the sake of all who love you, stay!'

'Nothing of this,' he said, with an approach to sternness in his tones, 'to any one but me. Remember that. Good-bye, again.' He had always seen her so timid and so yielding until now, that her persistence amazed him. She clung to him with both hands; and without violence, which was impossible, he could not escape her. Seeing this, he stood with passionless sullen patience, and she wasted entreaty on a human rock. In the intensity of her eagerness, she tried to move him by force from where he stood; but she was so feeble and small, and he so great and strong, that with all her vehemence she could not sway him by a hair's-breadth. It was all so fearfully plain to her now, so certain that he meant the worst! 'Stay!' she wept, dragging at him with all her feeble strength. He answered never a word. The terror mounted higher and higher in her heart, and she assailed him incoherently. He must not, must not go, to break all their hearts.

'Hearts are not so easily broken,' he answered at last. It was like a statue speaking.

'You will break mine!' she cried.

'Poor Milly,' he answered gently—'poor Milly!'—Suddenly she crimsoned, on brow and cheek and throat, and her hands dropped from him.—He kissed her on the forehead and passed from the room. The drooping, weeping figure, and the manner of his parting from it, crossed him many a time, later on, when his heart had softened and his longing for revenge was stilled.

He said the rest of his few farewells, and went up to London with Hiram. They drove straight to the river-side, and found the yacht almost in readiness to weigh anchor. It was significant to Hiram of the eagerness which lay beneath his master's stony exterior that he slept on board. Next morning came the sailing-master, a cheery-looking old man, with a face the colour of a brick wall, and silver hair and whiskers. He told Gerard that he had sailed the yacht for its last owner, and was full of her praises. In the after-

noon they started, in a heavy snow-storm; but before they reached Greenwich a small mutiny came about. One of the crew, who had been drinking too freely with his friends ashore, approached the captain.

'Beggin' pardon for bein' so bold, cap'n,' he said. 'I ain't a-going to sail in this yere craft.'

'Oh,' said the captain, good-humouredly enough, 'I think you are.'

'No; I ain't,' returned the seaman hoarsely. 'Not if I swims for it.'

'What's the matter?' asked Gerard, who was standing near.

'This craft's unlucky, *she is,*' the man responded; 'and no good'll come of her.'

'What's the matter with her?' asked Gerard. A little chill came over him.

'Why, it's a Friday, to begin with,' said the man; 'and as if that worn't sufficient, we're thirteen aboard. There's you, cap'n, and the mate, and four of us, and that's six; and there's a galley-cook and a cabin-cook, and that's eight; and there's the engineer and a brace o' stokers, and that's eleven; and the gentleman here, and the Yankee cove, and that's thirteen; and I ain't a-goin' to sail in this yere craft.'

'Go to your duty,' said the captain, with a laugh. 'We shall have three more aboard at Greenwich,' he added; 'and I never heard, sir,' turning to Gerard, 'that sixteen was an unlucky number.'

'We starts with thirteen,' said the man, with drunken doggedness, 'and I don't sail aboard of this yere craft.'

'Better set him ashore,' said Gerard. 'I'm not an idler, and my man is an old salt. We shall not be short-handed.'

'Very well, sir,' returned the captain. 'But I wouldn't listen to a fool like that, sir. He'll be all right in the morning, when he's sober.'

'I won't sail in this yere craft,' the man repeated.

'Well, I don't want any Jonahs aboard me,' returned the captain, who may have had his qualms about unlucky numbers too. And so, when the boat which carried the remainder of the crew came alongside, the objector with his belongings was put into it, and dismissed with derisive hoots and groans by his comrades of an hour. 'Yah! Jonah!' The self-discharged stood up in the stern. 'You'll come to no good,' he roared; 'I tell you so; you'll come to no good.' And in the vehemence of his repudiation of them, he fell over sideways and dived headlong into Thames. The two boatmen hauled him out, and the men aboard the yacht were in fits of laughter. But there was one saturnine face among them. It was of course more than sufficiently absurd that a man of culture should be affected by the vaticinations of a drunken sailor; but the superstitions inherent in the heart, live on in defiance of cultivation. Gerard, now that he came to think of it, would rather have sailed on any day in the seven than Friday, and would rather have carried any number at starting than thirteen. He sneered down these ridiculous fears, but they lived again in spite of him.

It was rough in the Channel, whose waters rather lorded it over their *Queen*, and it was rougher in the Bay of Biscay. But being once past Gibraltar, they found peace in the waters

of the Mediterranean until they came south of the Adriatic, where a fierce wind roared down from the Austrian Alps, and got to cross-purposes with a wicked gale which swept westward from the gates of the Black Sea, and made wild work for a time. The *Channel Queen* touched here and there, and Gerard went ashore and came aboard again. To Trieste. Across to Venice. Southward again to Brindisi. Then to Larnaca, a long stretch; and at Larnaca, he got the wished-for news. The yacht *Mew's-wing* sailed yesterday, bound for Alexandria. It was at the end of the second week in March, and in that happy region the sun was already warm and the air balmy. As the yacht left Larnaca behind, Gerard stood on deck looking straight beyond the prow, beating with one foot on the plank beneath him; and on his face there was a look of steadfast waiting, with now and then the merest transient flash of exultation. Hiram marked the new elasticity of his walk, and caught once or twice the gleam in his eyes. Not another soul aboard guessed the purpose of the cruise.

Master and servant were alike popular on board the little vessel, and each took his duty manfully. A day out from Cyprus shores, a heavy squall came on, and Gerard and Hiram did rather more than their fair share in it. The storm lasted ten hours, and when it had blown itself out, they went below, and slept. Eight hours later, Gerard came on deck.

'Seen anything?' he asked briefly.

'Sail on the weather-bow, sir,' said the mate, offering his glass.

Gerard took it, and looked long. 'What are we making?' he asked at last.

'About twelve, sir,' said the mate.

'There's no hurry,' said Gerard. 'It's a lovely morning. Slacken down a bit.'

'You'll find it a little heavy, sir, if you slacken speed. She rolls a good deal already.'

'Never mind,' he answered; 'we are in no hurry now.' The mate transmitted the master's orders, and the throb of the engines came slower on the ear. The change brought up Hiram Search, and he, setting his legs apart, scanned sea and sky. After a momentary observation, he gave a sudden start, and diving below, returned with marine glasses, and fixed the craft ahead.

'Hiram,' he said under his breath, 'you'll be wanted by-and-by, or I'm mistaken.'

'What is that craft doing, do you think?' asked Gerard, addressing the mate.

'She's making about our speed, sir,' the mate answered.

Gerard went below, and spent the day in his own cabin. Hiram hung uneasily about the vessel; now here, now there, and passed whole hours in watching the *Mew's-wing* as she courtesied, with half her white canvas set, to wind and sea. He knew every line of her long ago, and had recognised her at first sight. Towards nightfall, the wind failed, and having less way on her, she courtesied more and more. A wonderful moon arose, and the whole sea and sky lay bathed in her light.

'Hard times lately, sir,' said the captain cheerily, when Gerard came on deck.

'Never mind,' said Gerard quietly. 'Take another spell below. I'll sail her to-night. I feel wakeful.'

The captain protested, but Gerard insisted; and having made what he thought a decent resistance, the old man went down. He knew the master of the *Channel Queen* for a thorough sailor by this time, and was willing enough to get an extra snooze. 'You may tell the engineer to get a little extra way on,' said Gerard. 'Let us see what she can do. You can sleep without rocking.'

The captain laughed a cheery 'Good-night, sir,' as he went down.

The measured jar of the propeller grew swifter, and the speed of the craft greater. An hour later, Gerard went below for a minute, and returned with a bottle of rum beneath his pilot-coat. There were two seamen on deck, one at the wheel, and one at the bows. The sea gleamed wide beneath the moonlight, and slowly sank to peace after the squall, now at rest for sixteen hours. 'I'll take the wheel,' said Gerard, quietly handing the bottle to the man. 'You and your chum there can drink my health, if you like. You may both go down for an hour or two. I'll call you when I'm tired.' And now the deck was clear, and Gerard held the wheel.

'Great heavens!' murmured the wretched faithful Hiram, watchful of all, though unobserved. 'Is it goin' to be as bad and base as this?'

The moonbeams fell wide and soft upon the rolling sea, and the rolling sail of the *Mew's-wing* shot now and again in a silver gleam across the black edge of the liquid disk. The silver gleam rose higher, creeping up and up into the sky, and growing broader as it climbed. The helmsman steered, and the sole eyes under heaven that saw his purpose, watched. Stiff and chilled to the bone, Hiram crawled on deck and looked ahead.

'Who's there?' said Gerard.

'You mustn't do this, mister,' said Hiram, advancing and laying a hand upon one of the spokes of the wheel. The *Mew's-wing* was scarce a quarter of a mile ahead, and the steam yacht was in a line for her, going at full speed.—Gerard looked at him without a word.—'I could call the crew and stop it in a minute, mister,' said Hiram hoarsely; 'but I don't want to let it out that Gerard Lumby ever meant wholesale murder. Stand aside!—You won't, you madman? You shall!' He set his hands to the wheel; but he might as well have tried to lift the boat as to turn back the grip that guided her. 'Mister, there's a score of living souls aboard that craft. Let go the wheel.'

Gerard looked straight on with a face as rigid as stone.

'Hollo, there!' yelled a voice. 'Ahoy! ahoy! Where are you coming to? Port! port!'

The *Channel Queen* bore down. Hiram took his master by the waist and tore at him like a madman. The vessels were very near each other now.

'You'll forgive me some day,' said Hiram, and releasing Gerard, he retired a little, and then sprang forward like a flash and felled him with one blow to the deck. Then he seized the wheel and tore it round, jammed it hard down and closed his eyes. Confused wild cries were in his ears, and he looked out again. The yacht was within twenty yards of them, but safe.

There was a figure that he knew leaning forward from the shrouds, and Gerard was on his feet again, shaking a clenched hand at it. The clenched hand opened a denouncing forefinger, and a voice rang out: 'I shall have you yet, Val Strange!'

And the *Channel Queen* swept on, and left the *Mew's-wing* far behind.

(To be continued.)

CARD STORIES.

ON one occasion when Washington Irving, Bancroft, and Everett were chatting over diplomatic reminiscences, the last named told how after he and the Neapolitan ambassador had been presented to Her Majesty Queen Victoria, Lord Melbourne intimated that they would be expected to join in a game at whist with the Duchess of Kent. 'I play but a very poor game myself,' said Melbourne; 'in fact, I scarcely understand it; but the Duchess is very fond of it.'—'And I,' said the Neapolitan to Everett, 'am a very bad player; and should I chance to be your Excellency's partner, I invoke your forbearance in advance;' to which the American envoy replied that he knew very little of the game himself. As he put it, three dignified personages, clad in gorgeous attire, were solemnly going to play a game they imperfectly understood, and for which none of them cared in the least. Upon reaching the Duchess's apartments the ambassadors were formally presented, and then, at her invitation, sat down to play. As soon as the cards were dealt, a lady-in-waiting placed herself at the back of the Duchess, and the latter said: 'Your Excellencies will excuse me if I rely upon the advice of my friend here, for I must confess that I am really a very poor player.' This was almost too much for Everett's gravity; a gravity undisturbed for the rest of the evening, since he found playing whist under such conditions inexpressibly dull work.

Cavour did not find playing an unfamiliar game dull work when he lost a large sum at double dummy whist to a member of a Paris Club. He paid the money with the best grace imaginable, merely remarking that he thought he saw the game, and it might not be such a bad investment after all. The next night he met the same antagonist, played high, played steadily, played long, and rose from the table a richer man by thirty thousand pounds.

Bold as he could be when the game was worth the candle, Lord Beaconsfield would never have been tempted to risk so much on the cards; for knowing the weakness of his play, he carefully eschewed anything like high stakes. One evening, at the time when parliament was agitating itself about the Empress-ship of India, Lord Beaconsfield sat down to whist with the Prince of Wales, and asked the latter: 'What points, sir?'—'Oh, sovereign, if you please,' was the answer.—Seeing the Premier's look of annoyance, Mr Bernal Osborne observed: 'I think, sir, the Premier would rather have *crown* points!' The Prince, taking the joke and the hint, altered the stakes accordingly.

Marlborough was not above playing for smaller stakes, though perhaps the Great Captain did not play high out of fear of his loving Sarah,

who had a tongue, and knew how to use it; like the lady whose liege lord contrived that she should not more than suspect the secret of his bad hours; until, coming home at six in the morning tired out with 'attending on a sick friend,' he dozed at the breakfast table, and solemnly passing the bread, said: 'Cut!—'That's your sick friend, is it?' exclaimed the wife; and what followed may be imagined.

A card-hating wife can upon occasion set her scruples aside. Soon after the close of the Secession War, General Forrest and his wife stopped at an hotel in Memphis, and upon examining their purses, found the sum-total of their wealth amounted to seven dollars and thirty cents. The General being due that evening at a house where poker was sure to be played, proposed that he should tempt fortune to the full extent of his means, and asked his wife to pray for his success. She would not promise; but he felt she was for him, and knew how it would be. Let him tell the rest himself.

'They had tables—one was a quarter-dollar table, one a half, and one a dollar and a half. I wanted to make my seven dollars last as long as I could make it, so I sat down to the quarter table. By dinner-time I had won enough to do better; and after we had eaten, sat down to the dollar-and-a-half table. Sometimes I won, and then again I'd lose, until nigh upon midnight, when I had better luck. I knew Mary was sitting up anxious, and it made me cool. I set my hat on the floor, and every time I'd won I'd drop the money in the hat. I sat there until day broke, and then I took my hat up in both hands, smashed it on my head, and went home. When I got to my room, there sat Mary in her gown. She seemed tired and anxious, and though she looked mighty hard at me, she didn't say a word. I walked right up to her, and emptied my hat right into the lap of her gown, and then we sat down and counted it. Just fifteen hundred dollars even, and that gave me a start.'

Mr Clay's devotion to cards did not disturb his wife's equanimity in the least. Asked by a Northern belle if it did not distress her that her husband should gamble, the candid old lady replied: 'Not at all, my dear; he most always wins.'

The wife of Bishop Beadon loved whist so well, that when the prelate told one of his clergy if he was able to sit up half the night playing whist at the Bath Rooms, he must be well enough to do duty at home, the invalided one silenced him with: 'My lord, Mrs Beadon would tell you that late whist acts as a tonic or restorative to dyspeptic people with weak nerves.' The bishop's better-half would have sympathised with Goldsmith's old lady, who, lying sick unto death, played cards with the curate to pass the time away, and after winning all his money, had just proposed to play for her funeral charges, when she expired.

There have been stranger stakes still. * In 1735, when Henry and James Trotter sat down at the *Salmon Inn*, Chester-le-Street, to play a game of cards against Robert Thoms and Thomas Ellison, the latter pair staking five shillings, and the former a child, the son of a Mr and Mrs Leesh, who gave up their boy to the winners.—A traveller in New Zealand, spending a night in a squatter's hut,

was invited to cut in for a rubber of whist. As he took his seat, he inquired: 'What points?' His partner responded in a tone significant of surprise at such a question: 'Why, the usual game, of course—sheep points, and a bullock on the rubber.'

Unless Espartero and his foe Marota are much belied, more momentous issues were decided by the cards in a lone farmhouse at Bergara, where they privately met to arrange a truce between their respective forces. No sooner did Espartero enter the room, than the Carlist chief challenged him to a game at tressillo, a challenge the Christino commander accepted with alacrity. Espartero first won all Marota's money, then his own conditions for the truce, article by article, and finally the entire submission of the Carlist army. Within twenty-four hours, Marota had paid his debt, and the first Carlist war was at an end.

A Mr Purdy, as the end of his bachelorhood drew nigh, let his old cronies know it was his intention to forswear card-playing after perpetrating matrimony. They thereupon put their heads together, and a day or two after the wedding, invited him to a little dinner at Delmonico's, at which he was to receive a three hundred dollar silver service. Dinner done, and the presentation made, the party made themselves and their guest merry over some excellent wine, and when they thought the time had come, proposed a game of poker; and after a little hesitation, Purdy gave in 'just for this once.' His hosts had fixed things nicely, and calculated upon winning the price of their wedding gift, the dinner, and the wine. The game went on till long after daylight appeared, but by that time the intended victim had cleaned every one of them out, besides retaining lawful possession of the silver service.

Even the sharpest of sharpers may meet more than his match. Robert Houdin happening to saunter into a continental casino where a Greek was reaping a rare harvest at *écarté*, looked on quietly until a seat became vacant, and then dropped into it. The Greek, dealing dexterously, turned a king from the bottom of the pack. When the deal came to Houdin, he observed: 'When I turn kings from the bottom of the pack, I always do it with one hand instead of two; it is quite as easy, and much more elegant. See! here comes his majesty of diamonds;' and up came the card. The cheat stared at the conjurer for a moment, and then rushed from the place, without waiting to possess himself of his hat, coat, or stakes.

Another of the fraternity, after winning ten games at *écarté* in succession, tried his fortune against a new opponent; and still his luck held. He had made four points, and dealing, turned up a king and won. 'My luck is wonderful,' said he. '—Yes,' said his adversary; 'and all the more wonderful since I have the four kings of the pack in my pocket!' and the professor of *legerdmain* laid them on the table.

'I remember,' said a gentleman who had travelled in Russia, 'being at a ball given by the Empress to the late Emperor, on his birthday. I was playing at *écarté*, when the Emperor, who was wandering about, came behind me to watch the game. My adversary and I were both at four,

and it was my deal. "Now," said the Emperor, "let us see whether you can turn up the king?" —I dealt, and then held up the turn-up card, observing: "Your orders, sir, have been obeyed." —A dozen times afterwards, the Emperor asked me how I managed it; and he never would believe that it was a mere hazard, and that I had taken the chance of the card being a king.'

The Czar was as much astonished at the result of his remark as the young gentleman who, looking over a pretty girl's shoulder while she was playing cards, observed: 'What a lovely hand!'—'You may have it, if you want it,' murmured she; and all the rest of the evening he was wondering what her intentions were.

MY NEW FRIEND.

IN FOUR CHAPTERS.—CONCLUSION.

THE day appointed for the meeting, as detailed in the last chapter, was evidently to be an important one in my little history; for I was at length to see one of my employers, and I hoped that he would be favourably impressed with me. Perhaps I felt quite as much anxiety about my being favourably impressed with him. With his coming, too, my first recognised transaction in the service would be completed; for the representative of the Belgian firm would appear also, and hand me the delivery-orders for these goods, in return for cash. It was essential, as Scate had pointed out to me, that I should manage all this, as my agency would be largely concerned in the Belgian trade, and it was well that these people should see at the outset that I was intrusted with the conduct of a big affair. I was pleased at this, of course, and Mr Chelps was no less delighted than myself.

When the morning arrived, Mr Chelps was in unusual spirits, hopping about with a briskness quite remarkable for him, and quite remarkable, too, in an elderly invalid. He had already told me that he had succeeded in obtaining the money; he had received this on the previous afternoon, but it was in the form of a cheque; and he foresaw some difficulty in its acceptance by the Belgians, who would naturally regard a cheque offered by him with very different eyes from what they would regard one from such a firm as Bunner, Wreggs, and Carrowble. He had told Scate that this would probably be the case; and the latter, with his usual readiness, had promised that he would arrange so as to prevent any obstacle or inconvenience.

So remarkably brisk was Mr Chelps, that, having obtained permission for our servant Lizzie to go on a rather long errand for him, he insisted upon opening the street door to all callers himself, to save Mrs Matley and myself the trouble. Not only did his buoyant spirits prompt him to do this, and to sit all the morning, or nearly so, in the office, to be in readiness, but he avowed his intention of buying 'quite a lot of flowers,' as

he said; and so opened our front door at least half-a-dozen times to hail the passing venders of roots, blossoms, or bulbs. Once or twice, I came up into the hall while he was haggling with these men; but each time he playfully insisted upon my going back, as he did not intend Mrs Matley to have the slightest idea of what he was going to buy. It was to be a surprise for her, he said.

So the morning wore on until, punctual to his appointed time, Mr Scate appeared; and almost directly after him, the Belgian representative. This latter was a portly, respectable-looking gentleman, who seemed rather surprised at the aspect of the house to which he had been summoned to transact such important business. Scate evidently caught the glance, and, ready as usual, said: 'All very new here, sir—we shall have it altered in a few days. It was a long way to fetch you from the City; but Mr Matley—this is Mr Matley'—we bowed to each other—'will have a great part of our Belgian and French connection business, and so we wish him and his branch-house to be individually known to our continental friends. However, I'm sure you'll not mind, so long as the cash is here; and here it is.'

'No, sir,' returned the gentleman, who did not seem very much impressed by the rather ready jocularly in which Mr Scate so much excelled. 'As you say, it is no business of mine.'

'You have the delivery-notes, or warrants, of course?' said Scate, becoming terse in his turn.

'I have; here they are,' returned the stranger; 'and here is a receipt for sixteen hundred pounds cash.'

'Quite right,' said Scate.—'Now, Mr Chelms, your cheque.—And here in good time is Mr Wreggs; so you will have the security and see the principal at once, as I promised.' As he spoke, he ran and opened the door, at which a loud knock had just been given, and ushered in a dark, keen-looking man, who struck me as being one of the most sinister-looking individuals I had ever beheld; an idea not weakened by his being loaded with much ponderous jewellery.

'This is Mr Herdley, who represents Delroi & Co., sir.—And this is Mr Matley, our new agent, sir, of whom I spoke to you.—And this is Mr Chelms, a personal friend, who wishes, as I have told you, sir, to be allowed to join in your speculations.'

Mr Wreggs acknowledged each introduction with a short bow, accompanied in each case by a furtive glance, which in a measure reminded me of my customer Mr Jerry Wilkins.

'Will you see if those are right, sir?' said Scate to the new arrival, handing him the papers from Mr Herdley, as it seemed the Belgian agent was called.

'Yes; they will do,' said Wreggs; and after a little bustle in getting out his pocket-book,

Scate gathered up the papers again and laid them on the desk.

'Now, Mr Chelms,' he continued, 'Mr Wreggs has kindly promised to bring some more notes, as I know foreign houses are sometimes very reluctant to take the cheques of strangers.—Have you brought them, sir?'

'Yes,' said Wreggs briefly, drawing out in his turn a bulky pocket-book and handing therefrom a packet to Scate.

'Thank you, sir.—Then, if you will give me your cheque, Mr Chelms,' continued the latter, 'I will hand over notes of equal value, and give you the warrants besides.'

Mr Chelms, who had been gazing, as it seemed to me, in a kind of rapt admiration from Mr Wreggs to the Belgian agent, and back from the Belgian agent to Mr Wreggs, at this appeal produced a carefully folded paper from his pocket, and took thence a familiar-looking slip—the cheque. 'It's on the Bank of England, you see,' he said, as he handed it to Scate. 'Your friend Mr Wreggs knows all about that establishment.' He laughed as he said this; and the laugh was repeated by Scate and Wreggs, but in very different tones.

The former took the cheque, and thrust the heap of notes, increased by some from his own pocket, to Mr Herdley, saying: 'You will find those right, I have no doubt, sir;' then pushed the papers, or warrants, to Mr Chelms, adding: 'And there is your security, sir.'

Mr Chelms clutched them eagerly, crammed them into his pocket, and then, to my surprise, thrust two of his fingers into his mouth, and whistled loudly. We all started in amazement, and looked at him; but before a single word could be spoken, the door of the room was thrown violently open, and then, to my greater amazement, four men rushed in. In the momentary glance I caught of them as they entered, I saw that two of them were certainly fellows of whom I had seen Chelms buying flowers an hour before, while another was as certainly the stranger to whom I had spoken at the bar of the *Three Bells*.

'What the'—began Scate, turning fiercely upon Chelms; but ere he could complete his sentence, the old man had sprung from his chair full upon him, and had thrown his arms around him, two of the strangers seizing Mr Wreggs at the same instant.

'Get off, you old fool!' shouted Scate, with a savage oath; 'leave go, or it'll be the worse for you.'

'On with the bracelets, Bill!' cried Chelms, in a tone utterly different from his usual voice, and maintaining his grip with overpowering force, despite of the tremendous struggles of Scate. The latter plunged and kicked desperately; but the stranger of the *Three Bells* assisted Mr Chelms in holding his man, while one of the costermongers—actually one of the flower-men—pulled out a pair of handcuffs; and in thirty seconds from the time the door was opened, Scate and Mr Wreggs were each handcuffed and each held in the grip of two men; while Mr Herdley and myself looked on in helpless surprise, and, in my case at anyrate, some little dread.

When he released his hold of Scate, Chelms turned to me with a smile—a smile slight and

quiet in itself, but which yet seemed to change him altogether, so that I should hardly have known the man. 'You will apologise to Mrs Matley, if you please, for our causing so much unpleasantness in her house,' he said; 'but it was unavoidable. We shall not require your assistance at present; and I wish you particularly to assure your kind little wife that this will do you no harm—rather the other way. I shall call again this evening, after attending the court with our friends.'

Then turning to Mr Herdley, he continued: 'We shall want you with us, sir.—Now, Bill'—to one of the costermonger-like men, as I had once thought them, but whom I now began to see were something different—'call a couple of cabs, and let us be off.'

'But who—who and what are you?' I said, although I felt that I could have answered the question myself; 'and what have these men been doing?'

'I am Sergeant Moley from Scotland Yard,' replied my lodger. 'My name may be known to you. I will tell you all about these gentlemen when I call round this evening.'

His name known to me! I should think it was indeed, as that of the most dreaded and successful detective officer of the day.

'Oh, it's you, is it?' hissed Scate. 'If ever I get clear again, I'll put a bullet into you, if you are above ground.'

'Ah!' said Chelps—or Moley—coolly, 'that's what you are going to do when you are free. You are not free now, and my advice to you is to wait until you are, before you talk of your plans.'

In another minute the cabs arrived, and the whole of the strange party took their departure; Moley again leaving an assuring message for my wife, while the stranger of the *Three Bells* paused in the doorway to give me a most expressive wink.

I need not say how startled Susan was by my account of the long expected interview; indeed, but for the message left by Mr Chelps, in whom she still had great confidence, although he turned out to be a disguised detective—but for this, I am sure she would have utterly broken down. It was a great change, to be sure. All my bright visions, all my hope of returning prosperity, gone at a blow! and we were now as badly off, or even worse than when the hateful bills announcing the sale of my furniture were affixed to the house.

The day wore slowly and miserably away, until we had almost given up the hope of seeing our late lodger, when a knock was heard, and Lizzie after answering it, came to the breakfast-room door, and with her eyes opened to their utmost power of staring, and a face expressive of the most intense astonishment, said: 'Mr Chelps, ma'am, has called, and wants to see you.'

'Ask Mr Chelps down,' said my wife; and the next instant there was heard a quick firm step on the stairs, and then a dark, close-cropped, clean-shaved man, with keen small eyes, of square and powerful build, presented himself. He held out his hand, exclaiming: 'What! don't you know your old lodger?'

We asked him to sit down, which he did; and after a few apologetic remarks to my wife, he said, in answer to our inquiries, that he would

make a clean breast of it, and tell us all about the mystery. 'And, as you know I am fond of a pipe,' he continued, 'I will take the liberty, ma'am, of having a whiff during my story. I always think a man gets on better if he smokes.'

We of course made no objection; and Mr Chelps—to give him once more his old familiar name—after a moment's delay in preparation, lighted his pipe, took two or three kindling 'whiffs' at it, and then proceeded with his narration, thus:

'You know already that I am in the police, Mr Matley—and you, ma'am—so I need not stay to explain anything about that. Well, in the course of business, during the last year or two, we have been put on the track of a very dangerous and artful gang of swindlers, who were up to all sorts of dodges. Sometimes they would buy goods, and pay for them with bills that were never met. Sometimes they paid for them in forged notes, which then got into general circulation. Sometimes they bought stolen goods and goods from fraudulent debtors; in fact there's no telling all the games they were up to; and yet we could never quite get hold of them. More than once we have caught the men who actually appeared in the work; but they were at the best subordinates; more often, indeed, they were dupes themselves. At last it was pretty clear that one Edward Phillips, *alias* Scate, *alias* Nottingham Ned—by which last name he was generally known in flash circles—was deep in the business; and we were ordered to keep him in view.'

'We got some information soon after this which proved of use. We were told that his firm—as you know he calls it—were about to try their games on with some Belgian people, and that he was going to open a new receiving-house by the aid of a man who knew nothing of the firm or its plans. This man was you, Mr Matley; but as we did not wish to be always catching the dupe, who was as innocent as the persons who had been cheated themselves, I hit upon a plan by which I hoped to penetrate a little farther into the mystery. I made inquiries about you, sir; and found what difficulties you were in, and what a good character you bore, so I could pretty nearly tell what line Scate would take with you, and when he would begin.'

'I hit it, you must own, fairly well. I came to ask about your lodgings; and, to my delight, when I was asked into this very room, there sat the man I was most interested in. He did not want you to leave this house for a bit, so he eagerly advised you to take such an easy-going, purblind, thick-headed old fellow as me for a lodger. Of course I had expected to take furnished apartments; but when I found how things were, I said I would prefer bringing my own.'

'And so you did Mr—Ch—Moley!' exclaimed my wife; 'beautiful new furniture, which your married daughter, who had gone to Australia, had recently bought for you.'

'Ah! yes, to be sure, my married daughter! her furniture!' returned our friend, with a broad grin. 'Why, bless your heart, ma'am, I went straight from here that night and hired

it. I haven't got any married daughters! I haven't got any daughters at all. I'm an old bachelor.'

'Good gracious!' exclaimed my wife again; 'but you were quite overcome when you spoke of the loss of Mrs Chelms. Do you mean to say'—

'I do indeed, ma'am,' interrupted Mr Moley. 'We are obliged to do those things in the detective work. I could see you did not really like Scate; nor did Mr Matley.'

'I did not,' I said; 'I took a dislike to him from the first.'

'But to go on with my story. Once in the house and seeing him, and hearing what he had told you, my work began to be as plain as ABC. It was quite clear he meant you to run your head into the trap, and buy the stolen goods; be the responsible agent; give the forged bills; get rid of the flash notes, and so on. But the thing wanted was to get him to play all his cards at once, so as to smash the whole concern; because you see, ma'am, I wasn't quite satisfied even with the chance of getting him, while there were others behind. So I talked about my ready-money which I wished to have employed; and he jumped at the bait more readily than I expected.

'His plans were soon altered. Instead of going on gradually with you, he meant to have a big haul over this Belgian affair, and then sheer off. He meant, it was very clear, to sell the goods directly he got hold of them. He, or his precious partner Wreggs, had already sounded some people about buying them, and found they could get very nearly full value on the dock warrants. Then there was my money—eleven hundred pounds, you know—the two things together making such a pull as he did not often get.

'The first transaction you had was with Mr Jerry Wilkins. His name is no more Wilkins than mine is; but that don't matter. Well, what you bought was plate, sir, the proceeds of some burglaries at the West End.—Don't be alarmed, ma'am; nothing can touch your husband, who had no knowledge of what he was doing. Well, I wanted to be sure of this; so I took care to listen, and to loiter in the front garden so that I could see Mr Jerry when he called'—

'Then I suppose,' said I, interrupting him, 'that I really did see you looking over the banisters, and hiding at the back of the hall on both nights?'

'You did so, sir,' replied Mr Moley; 'and on the evening he came I planted one of our people at the *Three Bells*, who sent a boy to your place with a message, and so got you out of the way, while I examined the parcel you had bought. But when you said you had had a "turn" through not being able to find the package, which was on a different chair from where you thought you had laid it, you gave me a "turn" too; for while you spoke, I remembered that I had left it on the wrong chair. However, it came all right; and Scate no doubt thought it was all right, as he had succeeded in making you buy stolen goods. Yet, if this Belgian affair could be brought off, he would not want you at all; that was plain enough.

'Well, sir, to cut this short, as you know most of it. I was aware that these men were desperate

ruffians of the worst class. You would hardly think it, ma'am, but I am morally sure, though I can't bring it home to him, that this Scate has been in some of the cruellest things ever committed. So I got some of our men to call this morning, some dressed up as costermongers, one to ask a question, and so on, and I slipped them in without any one seeing them, and stowed them away in my room. When I whistled, they were to rush down at once.

'All went beautifully. The partner Mr Wreggs—a worse scoundrel, if possible, than the other—turned up just as I wished; while Mr Scate having got hold of my cheque, paid the Belgian party in bank-notes, every one of which was forged. He had given me the chance to examine them beforehand. He was a little too clever. He had prepared false dock-notes too; and when he was pretending to let his partner examine the originals and so forth, he changed the sets, so that he held the true ones, while he gave me the forgeries. When this was all done, I thought he had gone far enough, so I just gave my whistle, and— Well, you saw the rest.'

'I did see the rest!' I ejaculated; 'and thoroughly astonished I was to see it. But the strange gentleman—the Belgian agent—was he also of the gang?'

'O no!' exclaimed Moley; 'he certainly was not; and there come's in, ma'am, the best part of my story.' (He always addressed my wife, when he had anything specially interesting to say.) 'If I hadn't got such a finish to tell, I don't think I should have troubled you by coming round to-night. Mr Herdley was aware there was something suspicious in the business, although he did not know exactly what it was; and at first he thought, naturally enough, it was you, Mr Matley, who was at the bottom of it all. But I took care to put all that right; and shall always be glad I lit upon the idea of coming here to lodge, if only for being able, through doing so, to clear away any suspicion of that kind. Well, Mr Herdley and Mr Crobson, the head of your late firm, having married two sisters, are of course very friendly; and owing to what Mr Herdley has been able to say about you this day, your late firm have taken a great interest in you; so much so, ma'am, that old Mr Richards, the head-clerk, having resigned, they will write to-morrow, offering your husband the post.'

Susan and myself each uttered a cry of surprise here.

'It's quite, right, ma'am, you may rely,' continued Mr Moley, evidently delighted at the impression he had made; 'you will have the letter to-morrow for certain. And who so fit as you, Mr Matley, a man who knows the business, and who has always done his duty by the firm.'

I cannot stay to repeat all we said, or how we thanked the kindly detective, or how he pretended to ridicule my wife for crying at what ought to make her smile, while I could actually see a sympathetic glistering in his own eyes. He stayed with us long enough to smoke several pipes.

When he rose to leave, he said: 'Now, joking apart, ma'am, just the sober truth, you know—don't you think I was pretty well got up as an old man?—pretty well, for an amateur, you know?'

'It was wonderful,' said my wife. 'I never was more deceived in my life. I never saw anything on the stage to compare with it.'

Mr Moley quite giggled with pleasure and pride on hearing this testimony to his skill, and went away on excellent terms with himself.

His prophecy was borne out to the letter. My old employers wrote to me the next day; and on the following Monday I took my seat as head of the counting-house in which I had worked so long as a clerk. Nor did Mr Moley himself fare badly. The arrest of Scate and Wreggs led to other captures, and finally to the breaking-up of the best organised and most dangerous gang of swindlers in London; a result which brought Mr Moley promotion, a handsome present from some merchants, and repeated eulogiums in the press; the latter testimonials giving him, perhaps, the greatest pleasure of the whole; for with all his shrewdness and determination, he was rather a vain man.

For many years, until, indeed, he retired to his native county on a pension, Moley came once in each half-year to dine with us; always on a Sunday, and always with presents for our children, who regarded him as a sort of extra uncle, and were always uproariously glad to see him.

CRICKET CHAT.

BY AN OLD HAND.

Now that the bats and pads and flannels have been stowed away in their winter homes, and one more cricket season has gone to be numbered with the past, it is a fitting opportunity for us lovers of the grand old game to indulge in a little cricket chat. In cricket, as in all other sports and pleasures, retrospect is almost as delightful as actual enjoyment; and the true devotee of the game recounts past exploits, and tells how fields were won or lost, with just the same gusto that the Nimrod relates famous races, the mountaineer dwells upon past conquests, and the explorer shudders again over past risks and perils. So you young cricketer of the present day, with the bronze of the past season's sun scarcely yet driven from your face, and I, cricketer of the old school, whose cricket bronze has long since faded, will draw our chairs together and talk.

Let us just begin with the game as it was played on the old Lansdown and Brighton grounds, and upon the ever-green Vine at Sevenoaks, by gentlemen in silk tights and buckled shoes, and at a later period by old fogies like myself. The main features of the glorious old game are of course the same—a fact well worthy of remembrance by those who are fond of decrying the present age as one of wholesale innovation and Vandalic reform. But could royal Frederick Prince of Wales—Fred who was killed at Epsom by a blow from a cricket-ball—and his grandson the 'First Gentleman,' rise from their graves, and be stationed, say, at Canterbury or at Lord's, as spectators of one of our great matches, we may imagine that their surprise would equal that of one of Boadicea's warriors, could he be resuscitated and shown over Woolwich Arsenal. Fred and George used

four stumps in their game, and the modern bats were represented by a piece of wood laid upon the tops of the stumps; moreover, the stumps were not more than one half the height of those now in vogue; so that, as we shall see when we come to describe the bats used, to bowl a wicket was by no means an easy task. This arrangement of the stumps may be seen by an inspection of the interesting old illustrated score-sheets which hang upon the walls of the pavilion at the Sevenoaks Vine. Whether the 'W. Gs' or the Murdochs of the present day could run up their colossal scores with the bats familiar to Fred and George, is an open question; but to us, accustomed to the sturdy yet beautifully made willow weapons of the present day, they seem very cumbrous and unwieldy affairs. In London, two of them might have been seen not very long since in the window of Mr Mortlock's shop at the Waterloo Railway approach; but they have disappeared; and for the benefit of those who have not seen them, they may be described as huge scimitar-shaped pieces of dark wood, made of one piece, and guiltless of splice or whipping or inserted whale-bone, or of any of the little peculiarities of the modern 'stick,' and weighing considerably more than the double of the bat familiar to us. The ball, too, was a very ponderous concern, resembling more the *balista* of the ancient Romans than anything connected with modern games; and we can well understand that poor Fred did not survive the blow he received upon Epsom Downs.

It is quite an error to suppose that by the name given to the present era of cricket, 'the age of fast bowling,' our ancestors' cricket was a tame and effeminate pursuit. Alfred Mynn, Squire Osbaldistone, and Lord Frederick Beauclerk, could sling the balls in their under-hand style, at a pace which would make you, who may have seen Tarrant and Jackson, and who of course are familiar with 'Demon Spofforth' and Foord-Kelcey, stare as at the discovery of a new fact. And it should be remembered that the heroes first mentioned above no more thought of walking garished with pads and gloves to the wickets, than a sensible man would dream nowadays of going without them.

The introduction of the 'break-back' and 'twist' into the science of bowling—which is probably due to Fuller Pilch and old Lillywhite, although John Nyren, the earliest authority on cricket, mentions one man who was a master of these branches of cricket-cunning in his day—has of course rendered our modern bowling very far more efficacious than the old straight ahead honest system of 'trundling'; and it is to be doubted whether Alfred Mynn would be able to do much against A. G. Steel or Peate, although he might play Spofforth or Rotherham as well as any man can play such first-class fast bowling. I must say that I think it much to be regretted that there are so few fast under-hand bowlers at the present day, when there are such crowds of men and boys who waste time and energy in attempting to attain proficiency in the science of bowling round hand, notwithstanding all evidence that the gift is not in them. This opinion may be confirmed by watching the bowling at an ordinary match of the third or fourth class, and by noting

the very small proportion of straight balls delivered by men who professedly bowl for wickets and not for catches; and also by noting how frequently men who are, as a rule, 'very decent' bats, are completely nonplussed when confronted by village champions who are the last depositaries of the old fast under-hand style. If you doubt the efficacy of this style, make a point next season of going to Chislehurst, and observe the fatal effect of Crowhurst's bowling amongst good batsmen.

Paradoxical as it may appear, a cricketer of the old school is struck with the want of individual enthusiasm in modern cricket, notwithstanding the fact that the national enthusiasm in the game is growing year by year. To one match played fifty years ago, there are now probably played several hundred; yet I doubt if the combined enthusiasm of the hundreds of modern matches equals that which characterised the one match of the old days. The introduction of the colonial element into our great matches has brought out, naturally enough, the patriotic enthusiasm of English cricketers of all classes; but with this exception, there is none of the earnest, anxious, business-like interest taken in the game as of old. In the days, as the old cricketing song says,

When the great old Kent Eleven, full of pluck and hope, began

The great battle with All England, single-handed man to man,

a cricket-match between two clubs or villages aroused in the breasts of the spectators and of the players themselves, an intensity of excitement, an eagerness, an anxiety which only find modern parallels at a Tyneside boat-race or a stiffly contested election. Men went to cricket-matches then, not so much to spend an agreeable day beneath the shade of tall trees, to make a sort of picnic of the affair, with the accompaniments of gaily dressed ladies, military bands, and extravagant refreshments, as to enter heart and soul into the contest; to keep their eyes fastened on the game; to see how 'our Bill' would come off; to cheer lustily at every good stroke; to criticise; to live, in fact, in no other world for the time being than that shut within the limit of the cricket-field proper.

But what do we see now in one of our great Metropolitan matches? Be the title of the match ever so attractive, the majority of the company outside the ropes have come to see each other and to be seen, and it is to be doubted, if an analysis were to be made of the conversation of the five or ten thousand people present, whether the topics discussed would very materially pertain to the game itself. As with the spectators, so with the players themselves. Kentish Smith meets Kentish Jones, who has been playing in a county match. In the old days, Smith's first question would have been: 'Well, old fellow, did we win?' To-day, it would be: 'Well, old man, how many did you make?' or, 'How many wickets did you take?' The county man of the present day who gets out first ball, does not hang his head and walk despondently back to the pavilion because he has failed to uphold the honour of his county, but because he has been individually unfortunate and has 'spoilt his average.' At schools, the old feelings are cer-

tainly kept up; but when the boys leave school and go into the great cricketing world as men, it is to be feared they too frequently adopt the world's way of thinking, and play the fine old game simply for self. The very universality of cricket is, of course, the reason for this. Kent beats Sussex on Monday, and on Saturday the feat is forgotten. But in the old days, the victory would have been a subject for congratulation and enthusiasm for weeks after. Exceptions to this general apathy have been seen in the matches played by the Australian team in England. I believe that every Englishman who has been a spectator of these contests has been animated by a genuine earnest wish to see the Old Country come off victorious; and few who were present can forget the scene at Kennington Oval in September 1880, or in August of the present year, when twenty-five thousand persons were assembled to see the match between England and Australia. That was a sight to make the coldest and most impassive of hearts burn with enthusiasm; for it was a genuine match of the old sort, played by the finest living exponents of the game, in the face of the most critical cricket audience ever assembled.

When our ancestors played a cricket-match, they made of it a good, thorough employment and amusement for a whole day. There was no wasting the cream of the morning hours, as is now invariably the rule; no dawdling about with cigarettes in mouth; no aimless hitting and bowling at improvised wickets until within an hour and a half of luncheon-time; no unpardonable delays over luncheon and during the innings. They pitched their wickets at half-past nine, and by ten o'clock were hard at work—work which they continued until one o'clock, when they adjourned for half an hour, at the expiration of which time they recommenced play, and continued until the hour fixed for the drawing of the stumps. Now, this particular evil of indefensible waste of time is growing every day. It is quite the exception for any so-called 'whole-day match' to commence before twelve o'clock; and all who are familiar with active life in any shape, are aware how invaluable both in execution of brain and limb are the two hours preceding mid-day. At two o'clock the luncheon-bell rings. Luncheon lasts during the best part of an hour, and modern notions enact that it should be followed by a pipe or cigar, which brings the hour of recommencement up to three or beyond it. In these days of rapid communication, distance is no excuse to be offered for such meaningless waste of time as the commencement of a match at mid-day; and that it cannot be considered for a moment as an excuse is evident from the fact that there are hundreds of men who accept invitations to play 'whole-day matches' on Saturdays, and who find time to run up to town and accomplish a certain amount of business before it is necessary to put in an appearance on the cricket-ground.

Another crying evil which calls for the attention of all true cricketers is, as we have already hinted, the unnecessary extravagance and long duration of the modern cricket-lunch. The old cricketers adjourned to cold beef, bread-and-cheese, and beer; and surely we are not a whit inferior to them in

physical stamina and capability. But what do we often see? The modern cricketer, it may be taken for granted, is a man in full health and strength, makes a hearty breakfast between eight and ten o'clock in the morning, and yet it is deemed absolutely necessary that at two o'clock he should sit down to pickled salmon, meat-pies, cold and often hot joints, puddings, jellies, and tarts, washed down by beer, wine, and spirits of all kinds. No wonder he lounges out into the field afterwards as if he were filing out of church, and reluctantly parts with the end of his cigar or the unconsumed remnant of his pipe. No wonder that the batsmen who have become 'well-set' before lunch, frequently retire at the first straight ball, that catches are missed, and that 'wides' swell the total of the 'extras.' All this tends to support the statement we have made above, that the game is now regarded too much in the light of a picnic, and that the luxury which from all time has been the invariable accompaniment of progressive civilisation and refinement, has at last invaded many of the fields wherein, as the Iron Duke said, England's victories have been won.

In justice, however, I must concede that these delinquencies and shortcomings in the modern game have not yet become universal. There are hundreds of matches played every Saturday in England in the good old way—without waste of time, extravagances, or eccentricities. And after all, as you say, cricket is a pastime, and if some of its modern gentlemen exponents choose to invest it with the character of a picnic, why, be it so; it is so much the worse for the game, and perhaps for themselves. There is another evil, too, which is a serious one, and which has crept in with all these innovations. I mean the expense. A cricketer of the present day—I do not mean a village-green cricketer, but a member of some recognised club, who is prepared to follow the fortunes of the club wherever within reasonable limits they may lead him—must be a man of some means. Travelling expenses of course form an unavoidable item; but costume is considerably more than an item; and luncheon-money runs up very soon to the dimensions of a goodly sum. Cricket paraphernalia, too, are expensive, for every man who plays cricket at all regularly must be possessed of at least two bats, a pair of pads, and gloves; and all these put on to the sum of the annual subscription, form an almost insurmountable obstacle to many men. Still, as you remark, the old game flourishes exceedingly, and right glad I am to see it.

English cricketers have learned a lesson this year from the visit of the Australian team generally, and from the result of the great match in August at the Oval in particular. Amongst ordinary cricketers—I speak not of such men as those who fought for the Old Country in the above-mentioned contest—individual average, that curse of modern cricket, is the object of paramount importance to men from the very day they begin to fancy themselves becoming proficient.

To be a good cricketer nowadays seems to me to mean simply possessing the knack of knocking up runs. Let the doubter of this visit two or three of the great open spaces near London upon a Saturday afternoon. He will see that the applause which greets the success of a patient, painstaking bowler, or which follows a smart

piece of fielding, is nothing compared with that which is sure to reward a long innings or even a showy 'gallery' hit. Now, the Australians have shown us how utterly absurd this is. It may be said that they pursued their almost unbroken career of victory during their sojourn in England, simply by their magnificent all-round play. Every one of their men can be depended upon to do something out of the special department for which he is famed. Bonnor is a terrific hitter, but he is also a magnificent field; Bannerman, most patient of batsmen, fields and bowls equally well; Blackham, who vies with 'our Mr Lyttelton' for the honour of being the best wicket-keeper in the world, is a safe run-getter: in fact, without individualising the remainder of the men, we may say, that with perhaps the exception of Spofforth, who is good chiefly as a bowler, there is not such a thing in any department of the game as a 'tail' in the team. They are not a whit superior to us as batsmen. We could raise half a dozen such batting elevens, but I very much doubt if one of those elevens would, at such a critical period as during the last hour's play during the match at the Oval, show such wonderful nerve as did the Australians. They left us with the splendid record of having played thirty-eight matches, and of having been beaten but four times; whilst of the drawn matches, it was quite possible, when we remember their extraordinary faculty for 'pulling a game out of the fire,' that they might have won at least two. No county Eleven was victorious against them; whilst in some cases the utter discrepancy of power was so great, that the games were reduced to the level of farces—notably in the cases of Sussex, Derbyshire, Leicestershire, Middlesex, Kent, and even Nottingham and Gloucestershire. In four instances have they beaten combination Elevens which might almost be considered representative; and, with the exception of the Cambridge University match, the defeats they have encountered have been inflicted by very straggling, carefully chosen, and fully representative teams.

In the county matches, the causes of defeat have invariably been one of two—weak fielding, or unaccountable panic; and, as I have stated above, it has been to their excellent fielding and to their never-to-be shaken nerve that the Australians owe their success, far more than to their superiority as batsmen. However, the feeling of national humiliation seems to have taken such deep root amongst all classes of cricketers, that upon the next occasion of a visit from Australian cricketers, I sincerely hope the amount standing to the credit of Old England at the end of the season, may be of a very much more substantial nature than the balance of 1882.

What does an evening's practice at cricket mean, to the ordinary amateur of the present day? It means standing up with nets on each side and behind, to be bowled at for a quarter of an hour by a professional, afterwards to saunter away to smoke cigarettes or to play lawn-tennis. Who ever heard—I speak particularly of London clubs; I know not the custom in the country so well—of such a thing as fielding practice? Who ever saw an acknowledged bowler of merit, or rather of a man who might be a bowler of merit if he chose to take pains, bowling on the practice-

ground as he would bowl in a match? But every man bats his very best at practice. Does not this prove, my young friend, that your modern cricketers think everything of batting, and, to use an American expression, let everything else rip? Take down your nets; have double-wicket practice once a week; let every man try at least to be proficient in some one department of the game beyond batting, and when the Australian team next visits us, they will find county teams far harder nuts to crack than during the year 1882.

THE MONTH. SCIENCE AND ARTS.

MONSIEUR ESTIENNE, a well-known corn-merchant of Marseilles, annually compiles a most useful pamphlet giving information regarding the harvests of France and other countries in the northern hemisphere. This information he collects by means of inquiries addressed to leading men at home and abroad; and its authentic nature has long been recognised, for the little volume now holds its own in the corn-trade as a reliable guide. The issue for the present year is of a most satisfactory nature; for the reports are none of them of that gloomy character which familiar tales of agricultural failure would lead us to expect. The English crops generally are described as being the best for the past seven years. Scotland also sends satisfactory reports. In Ireland we learn that unfavourable weather has caused the wheat-crop to be under the average; but still the prospects were far from gloomy. Reports from Austria, Hungary, Russia, Germany, and other European states, all speak of plenty; while the wheat-harvest in the United States is described as the best ever gathered. Taking the information as a whole, we find that the world's harvest of 1882 is above the average, and is far better than has been experienced during the many years that these statistics have been collected.

We may reasonably hope that the attention now paid to agricultural chemistry, to improved machinery, and, more than all, the knowledge that has been acquired regarding insect pests, will gradually bring round British farming to its former prosperity. In former times, the farmer in his ignorance would too often kill his best friends, the small birds, which came into his fields not to rob him, but to destroy his enemies. Thanks to such workers as Miss Ormerod, these mistakes will be corrected. Her recently published *Manual of Injurious Insects, with Methods of Prevention and Remedy*, enables any one to identify an insect by means of pictures for comparison with the captured specimen, and gives directions for stopping its ravages. It forms an interesting book for all, but still more to those for whose use it is principally intended, and to whom it is dedicated, namely, 'the landowners, farmers, foresters, and gardeners of the United Kingdom.'

We recently alluded to the interesting trials

of various machines for drying hay and corn which took place at the Agricultural Society's Show at Reading. We then pointed out that the results of these trials could not be fairly considered until some time had elapsed, and the stacked produce had been thoroughly desiccated. The judges have now made their Report. A prize of one hundred guineas was offered for the best means of drying the material either before or after stacking; and there were eight competitors. It is a disappointment to find that the systems tried have failed; and that the judges report that they do not feel justified in awarding the prize. This result is most surprising, in the face of the letters which have appeared during the last few years in the *Times* and other newspapers testifying to the remarkable results attained by these hay-drying machines. The matter seems to require some explanation.

Some months ago, there was a great outcry among amateur archaeologists to the effect that the Ducal Palace and St Mark's, Venice, were about to receive irreparable damage at the hands of the modern restorer. A correspondent of the *Pall Mall Gazette*, who lately examined the repairs that have been and are being made, sets these alarms at rest. He reports that the old buildings were not only sinking in the soft muddy ground on which they stood, but that the sea-air had disintegrated the stone-work to such a depth that in many places the carvings were quite obliterated. Every particle of stone which it was possible to utilise has in these necessary repairs been retained, and the new work has been executed with such skill that the most fastidious could not object to it. On the whole, our informant considers that the work could not possibly be better done.

A curious observation regarding hailstorms has lately been brought before the Swiss Geographical Societies at Geneva by Herr Riniker, the chief forester of Canton Aargau. He maintains that hailstorms do not occur where there are forests, and instances the case of a small chain of mountains in the south of Aargau known as the Lindenberge which are normally completely covered with trees. About twenty years ago, the forest was divided in two places by wide gaps, and immediately afterwards the valleys were visited by frequent hailstorms. Fourteen years ago the larger of these two open spaces was planted with firs, since which time the hailstorms have entirely ceased. Herr Riniker is inclined to attribute the phenomenon to electric action, suggesting that the hail and trees being charged with opposite kinds of electricity, their union gives rise to sufficient heat to prevent congelation of watery particles. If his deductions should be confirmed by further observation, we shall be able to add one more reason to the many which already exist why forests should to some extent be left as nature designed them.

That many landowners are aware of the importance of this question of tree-planting, more especially in its bearing on the rainfall of a particular district, we must acknowledge. But there are many whose sole idea of the value of timber is governed by the price which it will fetch in the market, and unfortunately such persons do not remember to plant young trees where they cut down old ones. We have

a noble example to the contrary in a former Duke of Athole, who was one of the most extensive tree-planters in the world. It is said that during his useful life he planted no fewer than twenty-seven million trees, covering fifteen thousand acres.

Mr Peter Squire, of St Neots, has lately published a method of dealing with wasps' nests, which seems not only to be novel but effectual. The usual plan of thrusting a sulphureous compound into the nest and leaving it to smoulder, is fraught with some uncertainty; and unless the operation is conducted at night, when the nests are difficult to find, it leads to unpleasant if not dangerous attacks from the enraged insects. Mr Squire's plan is available at any time of day, and consists in dropping into the nest one or two tablespoonfuls of pulverised 'commercial cyanide of potassium.' Unfortunately, this drug is of a deadly character, and it certainly should not be placed in irresponsible hands. The mere suggestion of a tablespoon in such a connection is enough to make any one shudder who is acquainted with the properties of the drug. Still, with great precautions, the plan may be adopted by fruit-growers. The act of dropping the drug into the hole does not disturb the inmates, and those who are abroad afterwards enter never to return. Mr Squire lately had the curiosity to dig up one of the nests so treated. He found in it three thousand four hundred dead wasps, besides a large number of grubs.

The Edison Electric Light Company have after much talk and great preparation at length entered upon their task of illuminating a large portion of New York by their incandescent lamps. It must be some time before we can judge of the real value of this experiment. We know that the lights, so far as they go, are successful; but we do not yet know their cost as ascertained by their lasting properties; neither do we yet know how the new method of illumination will answer when trusted to the hands of the ordinary unskilled householder. That the new system may prove cheaper than gas, is probable, for gas in New York is very dear; but experiments in this country prove on the whole that gas with all its disadvantages is cheaper than the incandescent lamps. But of course there are many people who will be glad to pay more for an illuminant which will respect their books and pictures, and which will not vitiate the air which they breathe.

The Home Office authorities have recently issued rules for the erection of lightning-conductors on all factories and magazines where explosives are dealt with. These rules comprise both the materials which should be selected for the conductors, and the best form of construction; the instructions being based upon the recently published Report of the Lightning-rod Conference. The various rules consider the jointing of the rods, the form of the points, their number and height, the way in which sharp curves should be avoided, the earth-connection, &c. One rule in particular calls attention to a precaution that is very frequently neglected, namely, that all spouts, gutters, iron doors, and other metal-work about the building should, to insure adequate protection, be in electrical connection with the lightning-rod.

M. Tissandier, the well-known author, artist, and

aéronaut, is projecting the manufacture of an elliptical balloon which is to be driven by a dynamo-machine and storage-batteries. The balloon will be a hundred and thirty-one feet long, and will have a capacity of more than a hundred thousand cubic feet. It is calculated to give a lifting-power of three and a half tons, which will, when the machinery is in place, allow for a ton of passengers and ballast. We do not know the precise object of constructing such a machine. That it will in any way add to the solution of the problem of aerial navigation, can hardly be maintained. We know that storage-batteries will turn a dynamo-machine, and we can also imagine that large fans actuated thereby will move such a balloon along, provided that the surrounding air be still. We have no doubt but that such a novel machine hovering over the streets of Paris will make some sensation, but it remains to be seen whether the venture will be of any more solid use.

Colonel Ziegler, who recently brought the subject of badly-made shoes before the Hygienic Congress at Geneva, made some statements of great importance. He stated that the examining surgeons in Switzerland are compelled every year to reject eight hundred recruits simply because their feet have been deformed, and rendered unfit for continued marching by the use of bad shoes. He pointed out that the human foot is naturally a yielding bow, which expands and contracts in the most elastic manner with every step. The shoemakers—in entire ignorance of the anatomy of the foot they are called upon to clothe—supply an article which gives rise to corns, which forces the toes all together, and which often positively leads to articular inflammation. 'The test of a perfect pair of shoes is,' said the Colonel, 'that when placed together they should touch only at the toes and the heels; the soles should follow the sinuosities of the feet, and to give room for their expansion, should exceed them in length by from a half to three-quarters of an inch.'

Attempts have been made in this and other countries to introduce shoes answering these conditions, and occasionally we see advertisements to that effect. But it cannot be denied that the large majority of shoemakers go on the old lines, and sell boots and shoes which bear in their shape very little relation to the human foot. Unfortunately, the powerful god of Fashion has laid down the dictum that 'clumsy-looking boots' are to be avoided, and so the five poor toes, whose tips should naturally cover four inches of space, are cramped into two. Ladies' boots are still more wretched in construction, by reason of the high heels now in vogue, which, besides crippling the walker, give her foot the appearance of a hoof. In getting measured for a pair of shoes or boots, the foot should be placed on a sheet of white paper on the floor, and a line should be drawn by the shoemaker round the foot. Thus the contour of the foot is got, and upon this basis the shoemaker should make his last. *Verb. sap.*

In these days of sanitary reforms, we are constantly on the look-out for lurking dangers to life; and the healthy state of our large cities, when compared with those of other countries, is a proof that our precautions meet with abundant reward. Rookeries of tumble-down dwellings are still not unknown among us; but these are gradually

giving way to large colonies of bricks and mortar, where families are lodged in flats, enjoying every improvement that sanitary science can suggest. The different conditions under which people live in other countries can be instanced by reference to San Francisco, where many, if not most of the houses are built on wooden foundations. So much unaccountable disease was lately experienced there, that the doctors began to suspect the houses of harbouring some unlooked-for nucleus of malaria. As a result of their investigations, they found that the woodwork touching the soil favoured in its gradual decay a fungoid growth, which gave lodging to a mass of living organisms. These, it seems, die down when the wood is no longer able to support them, and the decaying mass with its unhealthy emanations forms a source of disease.

Mr J. F. Smith, of Leicester, has suggested a novel method of building bridges either for temporary or permanent use, which seems to have many advantages both in simplicity and cheapness. Iron or steel cylinders, twenty, forty, or more feet in diameter, constructed of plates riveted to rolled iron or steel ribs, are rolled into the stream over which it is desired to carry the bridge. These gigantic cylinders, with half their diameters sunk under water, form so many arches upon which a level road can easily be thrown. The cylinders can be built up on the spot where they are required, or, filled in with a temporary floor at one end, can be readily floated to their destination. The system is expected to be useful in laying railroads across land subject to occasional flood.

Mr Crookes, whose researches concerning electrical discharges in high vacua caused so much excitement in the scientific world a few years back, has had a graceful compliment paid to him by the jury of the Paris Exhibition of Electricity. While regretting that it was out of their power to offer him a prize, they expressed their admiration of his beautiful experiments, and placed upon record their belief that none of the incandescent lamps which are now competing for public favour could have been possible had not Mr Crookes first found out the secret of managing extreme vacua. (Reference to old patent specifications will show that electric lamps on the same principle as those of Edison were contrived many years back; but they failed because their authors could not, by means of the air-pumps then at their disposal, remove the air sufficiently from the glass bulbs in which their incandescent carbon or platinum was contained.)

The proverbial ingenuity of our American cousins is well indicated by a reference to recent statistics gathered from their Patent Office, and while they testify to the industry of the nation, they also show, by the places of origin of different specifications, how the groove in which a man's thoughts are apt to run becomes moulded by the circumstances by which he is surrounded. The New York inventors give their minds principally to mechanical applications and scientific discoveries. From the New England States come contrivances of a labour-saving nature, many of them having reference to ordinary operations of the most trivial character. From the centres of agriculture come inventions relating to harvest operations and the like; while the Rocky Moun-

tains furnish specifications of mining implements. A fair proportion of the seekers after protection are foreigners, of whom by far the greater number hail from this country. Unfortunately, it is a well-ascertained fact that few people who patent their ideas, and who devote the best part of their lives to work which immeasurably benefits their fellow-beings, ever receive any money reward for their exertions. It is calculated that only one in every hundred makes it pay. The proportion of disappointed ones must be much larger in the British Patent Office, for the fees are so great, that many of those who manage to pay the few pounds required as a preliminary, are unable to complete the purchase-money, and thus they forfeit their claim for protection.

From the *Scotsman*, we learn that at various iron-works in Scotland, experiments on different scales have been made in connection with the smelting process, with a view to utilising the waste gases before burning them, by extracting the tar and ammonia which were found to be present in the gases of all blast-furnaces where coal was used as fuel; and after much labour and numerous experiments, Messrs Alexander and M'Cosh, of the firm of William Baird & Co., Gartsherrie, have successfully solved the problem, in practical form, of extracting the tar and ammonia, as subsidiary products, from their blast-furnaces without in the slightest degree disturbing the process of smelting. Some time ago, a work on a very considerable scale was erected at Gartsherrie Iron-works, and it is now in successful operation, recovering the tar and ammonia from blast-furnace gases, which, after passing through the apparatus and parting with their valuable products, are conveyed by piping to different parts of the works, for the generation of steam and other purposes.

At the meeting of the Iron and Steel Institute at Vienna, a paper was read announcing the successful rolling of steel ingots with their own initial heat, by means of what is termed the 'soaking-pit process.' A difficulty to be overcome in rolling a steel ingot into a rail, for instance, was, that the exterior of the heated ingot cooled more quickly than the interior; and expensive means had to be adopted to overcome this difficulty. According to Mr John Gjers, of Middlesborough, who read the above paper, this can now be done by simply placing the ingot, as soon as cast, into a pit and covering it over, which practically excluded the air. During this, the 'soaking' operation, a quantity of gas exuded from the ingot, and filled the pit, thus entirely preventing atmospheric air from entering. When the lid was removed, combustion took place. The operation of steel-making on a large scale will by this process be not only very much simplified, but its cost materially reduced.

Mr Thomas Fraser, 84 King Street, Aberdeen, has patented a Corrugated Vent-lining, from the use of which it is hoped that sweeping of vents will be rendered less necessary. These vent-linings may be made of any suitable clay; and the principle of their construction is, that the sharp edges of the folds or corrugations in the interior of the tube being at right angles to the draught of the chimney, the soot will not 'coat up' as on a flat surface, but be carried off by the draught.

BOOK GOSSIP.

It might not unnaturally be thought, from the number of brilliant pens that have attacked the knotty subject of Burns, his life, and his works, that very little had been left for later writers to do. And yet it is surprising to note the variety of view which the subject admits of, and the amount of interesting matter which can be extracted by the 'seeing eye' from the apparently already exhausted material. Professor Nichol of Glasgow is the latest writer on the theme of the Ayrshire Bard (*Robert Burns: A Summary of his Career and Genius*. Edinburgh: William Paterson). The little treatise is intended as an introduction to the edition of Burns issued by this publisher—an edition which is rich in facts relating to the poet's life, though unfortunately weak in the department of purely literary criticism.

Professor Nichol—who was not, however, the editor of this edition—writes his Introductory Notice of the poet with the raciness of style and clearness of literary insight which are his characteristics. Coming after such a galaxy of eminent writers as have already treated the subject—Allan Cunningham, John Gibson Lockhart, Thomas Carlyle, Robert Chambers, and Professor Wilson—Dr Nichol's task was not an easy one. The career and genius of Burns present enormous difficulties to the critic, and only men who approach somewhat to himself in their degree of mental strength and perception, have any chance of successfully grappling with those difficulties. With the exception of Professor Nichol, there has not been, so far as we remember, any one within the last dozen years who, either as biographer or essayist, has shown himself equal to the task. Either we have had weak pictures of the poet, based upon the narrow sympathies of the biographer and an imperfect appreciation of the poet, or we have had microscopic examinations made of some particular phase of his character, with the almost inevitable result of general distortion and unlikeness. Professor Nichol has wisely avoided extremes in the treatment of his subject. He has neither risen into the vague flights of the panegyrist, nor sunk into the bathos of the apologist. He has simply taken the man as he is to be found—not indeed like other men, but rather as a kind of phenomenon among men; and the result is a treatise thoroughly healthy in tone, and fairly accurate in its results.

* *

Mr Robert K. Douglas, Professor of Chinese at King's College, London, has recently issued a very valuable work, entitled *China*, and published by the Society for Promoting Christian Knowledge. The volume is one that yields a vast quantity of instructive as well as entertaining knowledge of 'far Cathay' and its singular people. The sketch of the history of the Chinese Empire with which the book opens is concise and clear in its details, with enough of interesting bits to carry the reader through the drier chronological passages. According to Professor Douglas, the first records we have of the Chinese represent them as a band of immigrants settling in the north-eastern provinces of the modern empire of China,

and fighting their way amongst the aborigines. It is believed, from the philological evidence afforded by an examination of their language, that these first settlers came from the south of the Caspian Sea, and that the date of their exodus might be about the twenty-fourth or twenty-third century B.C. It would appear also, he says, that the Chinese came into China possessed of the resources of Western Asian culture, bringing with them a knowledge of writing and astronomy, as well as of the arts which primarily minister to the wants and comfort of mankind. We are not, therefore, to confound these early immigrants with barbarians.

In the production of his book, Professor Douglas has evidently availed himself of all the best and latest works on the subject of China; and hence we have therein a clear and succinct synopsis of all that is worth knowing regarding the history of that marvellous country: its government; its systems of education and agriculture; its medicine, music, and architecture; the forms and ceremonies of marriage among the people, their food and dress, their superstitions and funeral rites. There are three chapters of particular interest and value to the general student, namely, those relating to the religions, the language, and the literature of China. It is seldom that so much accurate knowledge combined with picturesque and graphic description, is served up to the public in a form at once so agreeable and convenient.

CONTRASTS.

A SHORT June night, now brightening fast to dawn;
A house with doors and windows open wide;
A silent sick-room, where a dying man
Lies prostrate in his youth and manhood's pride.

A bird's sweet carol, entering glad and shrill—
A bird that sings of Hope, when Hope has fled;
And the sound smites the watcher with a thrill
Of agony—as if some Voice had said—

'Weep on—and watch! but I shall sing as sweet
Among the roses—though thy dear ones die;
And all the world shall pass with careless feet,
Although *thy* heart be broken utterly!'

O little bird! how tuneful was that lay,
That fell so bitterly on mourners' ears;
Yet it was Summer—and what tongue will say:
'Twere well if Nature too could share *our* tears!'

The Conductors of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice:

1st. All communications should be addressed to the 'Editor, 339 High Street, Edinburgh.'

2d. To insure return in case of ineligibility, postage-stamps should accompany every manuscript.

3d. MANUSCRIPTS should bear the author's full *Christian* name, surname, and address, legibly written; and should be written on white (not blue) paper, and on one side of the leaf only.

4th. Poetical offerings should invariably be accompanied by a stamped and directed envelope.

Unless Contributors comply with the above rules, the Editor cannot undertake to return ineligible papers.

Printed and Published by W. & R. CHAMBERS, 47 Paternoster Row, LONDON, and 339 High Street, EDINBURGH.

COSMIC DUST.

THE constant presence of dust in the air may be demonstrated by the familiar experiment of admitting a beam of sunlight into a dark room. The path of the beam becomes plainly visible owing to the reflection of the light by the myriad particles floating about. Were the air quite pure, of course nothing of the kind would be seen. But to prove that dust also exists in the open air, we must have recourse to a different method. If we cover a plate with a thin coating of glycerine and expose it to a strong wind, numerous particles of matter will be found deposited on its surface. Examined with the microscope, these prove to be pollen-grains from flowers, bits of vegetable fibres and hairs, mineral and rocky fragments of all kinds, and *iron*. The presence of vegetable and mineral particles is easily explained; but not so the iron. Let us see what we can learn about this singular element in the dust.

Showers of dust are not uncommon occurrences in the neighbourhood of active volcanoes. Mr Edward Whymper witnessed an eruption of Cotopaxi, in which dust and ashes calculated to weigh about two million tons were thrown into the air. But dust-showers of other than volcanic origin have frequently been observed. The first instance of such a one is mentioned by Theophrastus as having occurred in the year 743 A.D., accompanied by a luminous meteor, or fireball, as it is popularly termed. Dr D. P. Thomson cites many cases between 1548 and 1838, in most instances attended by a fireball. The evidence of such dust-falls occurring in past ages is not wanting, nor is the phenomenon confined to any particular part of the earth's surface. Nordenskjöld found particles of metallic iron and nickel in the snow during a snow-storm at Stockholm in December 1871; and in the following year, when exploring the Arctic regions, he discovered similar particles on the Polar ice and in the snows of Finland. Some hailstones which fell in Ireland in 1821 contained a metallic nucleus of iron pyrites. A

like phenomenon occurred in Siberia in the year 1824. Dr T. L. Phipson, and more recently M. Tissandier, exposed glycerined plates to the winds in various localities, and found iron particles deposited on them. In 1879, dust fell in various parts of Sicily and Italy; and about the same time some was got from the snow found in the open fields near Kiel in Germany. Dr Reichenbach, of Vienna, has shown that the dust which covers the tops of mountains and other elevated places contains metallic particles. Finally, magnetic dust was found by Mr John Murray, of H.M.S. *Challenger*, in the dredgings of the sea-bottom.

Arago long ago gave his attention to this metallic dust in the atmosphere, and published his views on the subject in the *Annuaire* for 1832. He said: 'The attentive observation of falls of dust renders it presumable that they are not essentially different from those of the ordinary *œrolites*.' In this opinion the eminent Frenchman has been followed by Reichenbach, Nordenskjöld, Silvestri, and Tissandier, who have each devoted some study to the question; but two dissentients have recently appeared in MM. Tacchini and Von Lasaulx, who state their belief that the so-called cosmic dust is of terrestrial origin. Before examining their grounds for this opinion, let us briefly notice the evidence in favour of this dust being cosmic, that is to say, non-terrestrial.

The similarity between the composition of meteoric dust and that of meteoric stones (*œrolites*) is very remarkable. We do not mean to say that their constituents are identical in every case. Sometimes the dust differs materially from an *œrolite*. But then we must remember that *œrolites* differ among themselves, a substance present in one being found in another in much smaller quantity, or even being absent altogether. This similarity, then, is sufficiently marked to render it extremely improbable that the dust and stones are derived from different sources. Another reason for assuming their intimate relation to one another is to be found in the fact that the fall both of *œrolites* and showers of

non-volcanic dust is generally preceded by the appearance of a fireball. It can hardly be a mere coincidence that in most of the recorded instances of the showers the previous appearance of a fireball is mentioned. The identification of our dust with the phenomenon of fireballs is one step. Let us take another. Every night in the year, but more especially on two nights in August and November respectively, what are known as shooting-stars may be seen. On some occasions these shooting-stars have been very large, so large as to assume the exact appearance of fireballs. We have reason to believe that these meteors are small fireballs; and that just as fireballs often burst and scatter stones and dust, the smaller meteors contribute their own share of foreign matter to our atmosphere. Now, are there any celestial bodies to which we may look as the common source of the phenomena of shooting-stars, fireballs, aërolites, and meteoric dust? Without detailing the various steps by which we have arrived at our knowledge, suffice it to state that comets appear to be the denizens of space to which we owe our meteoric phenomena. Olmsted showed that the meteor-showers of August and November diverge from certain fixed points in the heavens, thus indicating their planetary nature; and Schiaparelli, an Italian astronomer, demonstrated the identity of their orbits round the sun with those of certain comets. The fact has thus been established that meteors are due to the earth passing through rings of matter which revolve round the sun in cometary or elliptic orbits, the larger masses of this matter reaching the earth as aërolites, and the smaller ones being frittered into dust by the resistance of the air.

Professor Tacchini, of the Collegio Romano in Rome, has recently analysed the dust which fell in various parts of Sicily and Italy during 1879. The dust was borne on the sirocco, a dry wind which blows from the African desert. The examination revealed the presence of the usual constituents—granules of metallic iron, nickel, cobalt, phosphorus, magnesia, &c. The composition of the dust tells us nothing new. But Professor Tacchini has observed that its fall is invariably accompanied by a barometric depression. The full significance of this discovery will be appreciated when we mention that the Professor hangs a theory upon it. The theory we take to be this: Whirlwinds and cyclones in the Sahara raise quantities of dust into the higher regions of the atmosphere; it there remains suspended for several days until transported across the Mediterranean; then a small descending cyclone—the cause of the barometric depression—brings it to the surface of the earth. There can be no difficulty whatever in the way of the acceptance of this explanation, if it be shown that the dust of the Sahara contains the substances found in that deposited by the sirocco. Tacchini attempts to do this. Nordenskjöld's discovery of native iron in Greenland affords the clue. If metallic iron occurs in Greenland and elsewhere, why should it not do so in the Sahara, and thus supply the metallic, or so-called meteoric, element in the dust? We shall return to this question directly.

Nordenskjöld, in the dust which he collected in the Arctic regions, found certain small white

grains, which he described as 'cryoconite.' It was partly from the presence of these grains that he inferred its origin to be cosmic, and consequently not pertaining to our earth. Silvestri found spherules of iron with nickel in some dust that fell at Catania, and assumed from that circumstance that it must be meteoric. Specimens of the cryoconite and the Catanian dust, together with some obtained from the snow near Kiel, were recently submitted to the eminent mineralogist, Von Lasaulx; and that gentleman, as the result of his examination, has announced his opinion that the dust is not of cosmic origin at all, but simply detritus derived from the rocks on the earth's surface. The cryoconite he found to be principally composed of quartz and mica, two minerals which are almost unknown in meteorites. There were no mineral particles present which would indicate a cosmical origin. Hence he concludes that 'the dust may undoubtedly have come from the gneiss region of the coast of Greenland.' The constituents of which the Catanian dust was made up were, with the exception of the iron particles, such as might have their origin within Sicily. Mount Etna would supply the augite and olivine crystals found in it. Finally, in the dust brought from Kiel there was no trace of minerals which would indicate a non-terrestrial origin, with the exception of a few particles of metallic iron which could be attracted with the magnet. 'If we now group the observations of the various dust-masses precipitated from the atmosphere, it first appears that, in nearly their whole mass, these varieties of dust consist of mineral particles which may be very well regarded as a detritus of rocks more or less near. Only the metallic iron, present always, but in very small quantity, can be considered cosmic.' Having arrived at this conclusion, M. Von Lasaulx goes on to prove how the presence of metallic iron does not necessarily indicate a cosmic origin. The masses of iron found at Ovivak in Greenland were, in the opinion of many authorities, of terrestrial origin; and if that assumption were reasonable in the case of large blocks, it must be equally so in the case of dust.

It will be observed that both our authors find a difficulty in accounting for the presence of iron particles in atmospheric dust, and that they get over the difficulty by referring to the Ovivak masses discovered by Nordenskjöld in 1870. Tacchini supposes that similar matter may exist in the sands of the Sahara; and Von Lasaulx assumes that the blocks are volcanic, and that iron dust may therefore be of terrestrial origin also. Both observers seem to have completely forgotten the reasons why Steenstrup, Dr Lawrence Smith, and others came to the conclusion that the Ovivak iron was terrestrial. One of the reasons was this, that carbon was invariably combined with the Greenland iron, and as invariably absent from meteoric iron. So of course the Ovivak masses do not throw the least light upon the presence of meteoric iron particles in atmospheric dust. Were the composition of the Greenland native iron and that found in meteorites and meteoric dust identical, we would be forced to conclude either that it had all a common cosmic origin, or was all derived from terrestrial sources; but the difference observed permits, if

it does not compel us to assign the Ovifak blocks and meteoric iron to entirely different sources. The one was reduced by the action of organic matters (hydrocarbons); the other comes to us from the realms of space.

Until Arago took up the subject, the precipitation of dust from the air seems to have excited but little interest. At the present time, it is receiving some attention from scientific men. In 1879, Mr Ranyard presented a paper to the Royal Astronomical Society giving a detailed account of the known observations on meteoric dust previous to that date; and in the following year a Committee was appointed by the British Association for the double purpose of examining past observations, and discussing the best means of prosecuting more systematic investigations in the future. The Report of this Committee was read by Professor Schuster at the meeting of the Association at York, the principal point dealt with being the method of observation to be pursued. The first point to be determined is the approximate quantity of dust which falls within a given time. An instrument suitable for this purpose, devised by Dr Pierre Miguel, was described in the *Annuaire de Montsouris* for 1879. An aspirator draws a quantity of air through a fine hole, the stream impinging on a plate coated with glycerine, which retains all solid particles. The volume of air drawn in being known, the relative proportion of solid matter is easily got. A second, less accurate, but more portable form of the instrument was also described. The aspirator is dispensed with, and a weathercock substituted, which always directs the opening against the wind. The solid matter is retained by means of a glycerine plate, as in the other form. An anemometer placed in the immediate vicinity shows approximately the volume of air that has passed through the apparatus. The most difficult matter in using these aëroscopes, as they are called, is the selection of a suitable locality. The place ought to be as free as possible from ordinary dust. Some spot in mid-ocean would do very well; but uninterrupted observations for any length of time would be almost impossible there. An elevated station in the Alps is a more likely place, and should such a station be established, we may hope for valuable results concerning this vexed question.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

BY DAVID CHRISTIE MURRAY.

CHAPTER XLIII.—THE HORROR OF THE VENGEANCE HIS ENEMY HAD PURPOSED LEFT VAL UNHINGED AND TERROR-STRICKEN.

MORNING broke bright and beautiful. 'Mr Search, Mr Search,' said the captain, with a half-comic, half-serious glance at Hiram, 'somebody's been steering a queer course lately.' 'We went out a point or two to look at that yacht,' said Hiram shiftily.

'And lost your reckoning afterwards,' said the captain. 'I thought you were better sailors, both of you. Might be running for Odessa this way rather than Alexandria.'

'Well,' returning Hiram, feigning ill-temper,

'you can steer the ship yourself, captain. I reckon it's your business.'

The genial old skipper stared after him as he left the deck. 'What makes him so sore all of a sudden?' he wondered. But he never spoke again of the night's wayward steering, and perhaps that served Hiram Search's turn.

As for Gerard, he showed little difference of manner. Hiram, when he was left alone, and the *Mew's-wing* had faded out of sight in the gray mist of morning, found time to think matters over, and came to the conclusion that he would have to encounter one of two things—a passionate and profound resentment, or a gratitude equally passionate and profound. Gerard gave sign of neither the one nor the other, but met him almost as if nothing had happened. 'British again,' said Hiram; but Gerard's behaviour was not the less bewildering to him that he pretended thus lightly to find a solution for it.

Meantime, aboard the *Mew's-wing* there was amazement and dread. Every man aboard had known the story of their owner's treachery to his friend in some garbled and distorted form. But Val from the first gathering of the crew together had been a favourite with them all, and in their eyes the elopement had been the triumph of true love over unknown obstacles. The rough fellows liked Romance, like the rest of the world; and Constance, who could be haughty and cold enough to social equals, had never been anything but gracious and kindly to those below her; and had, by dint of her regal beauty and her gentleness, enlisted all these hearts at once. They could not tell why she and Val had parted, but they talked about the parting, and thought about it, and had queer stories to explain it. Gerard had been once aboard the *Mew's-wing*, and in the awful moment when the steam yacht crossed her, Val was not the only man who recognised him. The wild cry of the look-out had brought them all on deck; and the look-out himself had seen the struggle at the wheel, and had beheld the blow which saved the yacht and every soul on board. The men talked these things over, and by-and-by murmurs of rage and fear began to rise amongst them. After a while, they came forward in a body, and setting forth their spokesman, demanded, through him, to be run into the nearest port and there disbanded.

'Us thinks, sir,' said the spokesman, respectfully but firmly, 'as after what took place this morning, no man's life's safe aboard this craft.'—A murmur of assent encouraged him.—'It's clear the party meant to run us down; an' him being steam, an' us being canvas, the odds is all agen us. All fair an' proper risks us is willing to run, sir, but not that. Some of us is married, an' some of us ain't; but us has all got our lives to look after, an' what us says is: "Make a clean run for the nearest port, pay us our doos, an' leave us to shift for ourselves."—That's it, I think, my lads?'

That was it, said a rough murmur from behind him. The horror of the vengeance his enemy had purposed left Val unHINGED and terror-stricken. He was not a coward; but in view of the deadly hatred Gerard's attempt bespoke, his

common courage left him. It was scarcely likely, he told himself, that he would long escape a revenge so ready to stick at nothing; but even at the push of desperation, he could not feel justified in dragging all these people into his own risk. He gave way without a word of protest.

'My lads,' he said, 'I cannot say that I share your belief; but since you hold it, I will let you have your way.'

'Not share the belief, sir?' said the skipper. 'Why, Thomson saw the struggle, and you know what the moonlight was. You don't mean to say you think they didn't see us?'

'You may be sure of this, Soulsby,' said Val, as quietly as he could—'since the struggle did take place, the attempt will not be repeated. You don't suppose that any crew would allow their vessel to run another down, do you?'

'There's some comfort in that reflection, sir,' said the skipper; and he passed the consolatory question to the mate, who passed it to the men. They agreed that one bloodthirsty madman would be as many as any one boat would be likely to carry at a time, and found satisfaction in the belief that by this time the late helmsman was probably in irons. 'You'll report this to the consul when we land, of course, sir?'

'I don't see what good that would do, Soulsby,' said Val.

'Well, sir,' returned the skipper, 'if you don't, I shall. And there'll be such a look-out kept aboard this boat as never was kept before; and if the gentleman tries his game again, I'm a reasonably good shot, and I shall have a fairish try to bring him down. I set a value on my life, sir,' he concluded, and walked away indignant.

No other attempt was made; and the sharpest look-out which could be kept failed to sight the *Channel Queen*. But the skipper kept his word, and reported the affair to the British consul when they reached their port; and the official sent for Val, and was for taking it up at once, as an unheard-of outrage. Val pooh-poohed the whole business.

'I never came near such a set of old women in my life,' he declared. 'The man at the wheel and some other fool were fighting, and only saw us just in time to clear us.'

'But your sailing-master tells me that he heard the man threaten you by name,' said the consul. '"I shall run you down, Val Strange," or words to that effect, were used, he swears.'

'Why not, "If you're not run down, it's strange?"' questioned Val readily. He had been prepared for this.

The consul burst out laughing, and admitted that this reading was the likelier of the two. After all, he said, Mr Strange was the interested party, and not the skipper. The skipper called once more to know what was being done; and the consul told him briefly and with some scorn what colour the yacht's owner had put upon the matter.

'It's well known to all of us,' said the skipper, 'who the man was that tried to run us down, and what was his reason for it. Mr Strange ran away with the lady he was to marry and married her himself; and as to the words, I'll swear to 'em before judge and jury.'

In effect, the skipper went away in high anger.

The consul told him that he was an insolent and cross-grained fellow, and was himself left a good deal puzzled by the business. He felt bound to accept Val's view of it, however; and the skipper being paid to the uttermost farthing, went to England in the first homeward-bound vessel, a little mollified, but not to be converted from his own belief. He was, however, a man of discretion, and had many grounds of gratitude to his late employer, and held his tongue between his teeth, therefore. Jacky Tar in general being discharged at his own desire, and plentifully supplied with money, sought his own joys and had his fling, and thought no more about his narrow escape than to make a foc'sle yarn of it.

The reason for Val's conduct was not far to seek, though it was somewhat complex. He admitted the gigantic wrong he had done against his friend, and was not so blind an egotist that he could not understand the injured man's longing for the wild justice of revenge. There was a feeling in his mind, too, that since he had left Gerard without any legal remedy an honourable man might try for, he was bound to accept the risk of any illegal remedy he might seek; and there was thus a sense in his mind that to ask the protection of the law would be base beyond anything he had done already. That is a sense in which I suppose that any high-minded man who will fancy himself in Val Strange's place will not find it difficult to share. And beyond these, which were more than sufficient for him, lay another reason: nothing could have been done, even had he willed it, without the introduction of Constance's name. Any one link in this chain might have served to hold him motionless.

The breach between himself and his wife was not a severance of love, but a confession of remorse. No man sins against his own high instincts with impunity; but there are some who are of fibre tough enough to long for pardon and yet retain the offence. But Val and Constance in the ordinary course of circumstance should have been blameless people, leading lovable lives, and as happy as this hard world will allow to the happiest. He wrote to her sad short letters, telling her he was here or there, and bound here or there; and she answered as shortly and as sadly. But now, to his surprise, came a letter urging him to return to her. He left his yacht in charge of the agent of an English shipping firm, instructing him to sell her, and took ship for Naples. May was drawing near, and all the exquisite country was in rich bloom. The Chiaja was crowded in the tranquil evenings; and there were trips to Posillippo by land, and trips to San Giovanna's Palace by moonlight, by water; and the gay southern city had fairly begun its long season of summer joys. Val had expected to be asked to share in these, and had with heavy heart braced himself to bear the burden of festivity; but he found Constance pale and languid and unlike her old self. She had news for him which would have revived his old tenderness had it needed revival, and which brought him to her feet again with a flush of something like the old rapturous delight. His joy and tenderness and fear melted her reserve, and this new meeting was the happiest moment of their brief and troubled wedded life.

'We may still be happy,' she murmured,

caressing his head as he knelt beside her. 'Let us make the best of life, Val. Let us be apart no more.'

'We will not part again,' said Val, with tears in his eyes, 'until death parts us.'

'Hush!' she answered, laying a hand upon his lips. 'Do not talk of that, Val.'

He was constant in his attendance upon her, and found her more than commonly full of those forebodings and presentiments which are common to women in her situation. He did not even know that they were common; and though he fought against them, and smiled them down in her presence, they weighed upon him heavily, and he had a horrible fear that they would be fulfilled. If she would have permitted it, he would have had every physician in the city in attendance upon her; though, with a touch of British prejudice, he despised them all, and would have had more confidence in an English medical student freshly dressed in the glories of a diploma. It chanced that a young English surgeon of great promise, though as yet of inconsiderable note, was at that time in Naples, whither he had accompanied, all the way from England, an elderly aristocrat, who had chosen to think himself ill, and now preferred to think himself cured of a complaint which had never ailed him. But the noble feeble Earl so enthusiastically cried the praises of his *medico*, in whose society he had chosen to cast off his fancied malady, that Val, hearing of him, eagerly got a letter of introduction to my lord, and from him an introduction to the young doctor. The doctor wanted to return to England, and was well pleased to find employment on the way. Val had a great desire that his child should be born at home, and Constance shared it. The doctor gave it as his opinion that she would do best to travel by sea, and if possible, by short stages. So they sailed for Marseilles, and lingered there a day or two, and then found a vessel bound for Cadiz, and sailed thither in exquisite summer weather, with scarce a heave upon the sea. Little Mary accompanied them, of course. She had written many letters to Hiram, bewailing her own wickedness, and giving her own small impressions of foreign parts. Hiram had responded in clerkly hand and periods rhetorical. When Hiram set pen to paper, he lost all the raciness characteristic of his speech, and modelled himself apparently on the dullest of newspaper leaders. 'I will not,' he wrote with most judicial and unloverlike gravity, 'attempt to add to the weight of your contrition by reproaching you for the part you have played in this lamentable tragedy. But I am attached by ties, which I will not pause to catalogue, to Mr Gerard Lumby, and I will not leave him until the wounds he has endured are cicatrised by time. You will see, therefore, that your own conduct holds us apart for an indefinite period.'

At first the very English of his epistle crushed its recipient. But it was so unlike Hiram, that she believed in her inmost heart that its severity was assumed; and this conviction, strengthened by desire, held her poor little heart alive. Like wiser people, she believed what was pleasant to believe; but in this matter she had the truth at least partly on her side. In Hiram's eyes, she had done wrong; but he had heard the argument by which she had been persuaded, and he knew

something of the struggle she had gone through. And he was, besides, one of those misguided people who have a mighty idea of the supremacy of the male creature in marriage; and like a good many others, he could be amazingly resolute—on paper. Of late, Hiram's letters had almost ceased; but she knew that he too was in foreign parts; and even that, though she could not hope to meet him, seemed vaguely to bring him nearer. She was immensely attached to Constance, who treated her with unvarying kindness; and altogether she was perhaps the least unhappy of the quintet whom the runaway match affected.

OBITUARY CURIOSITIES.

TIME was when people were content to wait a month to know how things were going in the world, and looked to the magazine, quite as much as the newspaper, for enlightenment on that head, an expectation in which they were not disappointed. A hundred years ago, the doings at court and in parliament, naval and military despatches, the results if not the details of criminal trials, theatrical criticisms, commercial statistics, and notifications of births, marriages, and deaths—lightened with a column or two of poetical effusions, were the staple contents of the periodical publications of the day, as represented by the *Gentleman's*, the *Scots*, and the *European* magazines. Announcements of births, marriages, and deaths were then accepted as gratuitous contributions, and the last mentioned were often expanded into biographical paragraphs, much more amusing and interesting than the curt advertisements familiar to modern eyes.

Dobbs, sexton of Ross, dying in 1798, aged eighty-seven, is described as the only inhabitant of the place having any recollection of the person or manners of John Kyrle, the Man of Ross. There was much ringing, singing, and drinking at his interment, the ceremonies commencing at noon, 'and the clock had told three in the morning before the tears of the tankard were dried up.' No such unseemly merry-making attended the obsequies of Thomas Bond of Lichfield, 'the original of Scrub in the *Beau's Stratagem*,' or those of 'Mr Psalmanazar, well known in many ingenious performances in different parts of literature,' who died in August 1763, many years after he created a sensation by the publication of his fictitious *History of Formosa*.

In the *Gentleman's Magazine* of July 1799, we read: 'At Bristol Hot Wells, Anthony Morris Storer, Esq., of Devonshire Street, and Turley, Bucks. A man whose singular felicity it was to excel in everything he set his hand and heart to, and who deserved in a certain degree, if any one ever did since the days of Crichton, the epithet of Admirable. He was the best dancer, the best skater of his time, and beat all his competitors at gymnastic honours. He excelled, too, as a musician and a disputant, and, very early, as a Latin poet. In short, whatever he undertook, he did it *con amore*, and as perfectly as if it were his only accomplishment. He was polite in his conversation, elegant in his manners, and amusing in a high degree or otherwise, in the extreme, as he felt himself and his company.'

Twelve years afterwards, Mr Urban records that the world had lost a feminine paragon, by the

death, at the age of twenty-one, of Miss Anne Butters; a young lady of delightful disposition and polished manners, who was conversant alike with ancient history, and the annals of her own country and of modern Europe; had an extraordinary acquaintance with geography, biography, and chronology, was alive to the charms of French literature, but enriched her imagination, strengthened her judgment, and refined her taste by perusing our own classics and poets. She was proficient at drawing, a beautiful writer, an admirable dancer; and when she played the piano, the effects produced by her correctness of judgment, delicacy of ear, and skillfulness of hand, were not unfrequently heightened by the clearness and melody of her voice. Some lucky man had won the heart and hand of this peerless maiden; 'but alas, she had a heart too susceptible of the fine feelings of our nature. The too eager contemplation of the supposed scenes of future happiness which had recently opened upon her mind, the powerful effect produced by the consequent congratulations of her friends, and by regret at leaving a parental roof, gave rise to a nervous affection of the mind, which speedily terminated in her death.'

Anticipations regarding the future had not in the same degree troubled the mind of Barbara Wilson, 'a virtuous old maid,' who died at Whittingham, East Lothian, in 1772, after enjoying single-blessedness for a hundred and twenty years! She was the hen-wife of Alexander Hay, Esq., and 'was so remarkable a genealogist of her feathered flock, as to be able to reckon to the tenth generation.' In testimony of her uncommon merit, her remains were conveyed to the grave by a large assembly of females, uniformly dressed, no male creature being permitted to join in the procession.

Tom Brown, of Garstang, had as great a contempt for mankind as Barbara Wilson herself. 'An occasional assistant in the kitchen of the neighbouring gentry, he could either please their tastes or mend their soles with any man of his day; but Tom would neither mend nor make for the lords of the creation; he would only take the measure of a female foot. A short time before his demise, he selected thirty-six of his feminine acquaintances to attend his funeral; and devised every penny he possessed to his female relatives.

A formidable list of centenarians might be compiled from the obituary columns of old magazines; but we will content ourselves with mentioning two, Isabella Sharpe and William Haseline. The last-named died in 1733, being then the oldest pensioner in Chelsea College. He well might be, if he had really attained the age of a hundred and twelve years and six months; after fighting for the Parliament at Edgehill, for King William in Ireland, and for Queen Anne in Flanders. There can be no question as to his courage, since he wedded and buried two wives after passing his century, and at the age of a hundred and ten took a third helpmate, who survived him. Besides his allowance from the College, this undeniable veteran had an income of ten shillings a week; one crown coming from the Duke of Richmond's pocket, and the other from that of Sir Robert Walpole. Isabella Sharpe was a widow, dwelling in Gateshead, where she died on the 17th of August 1812; and we are

told that, according to the baptismal register of the parish, she was christened on the 17th of August 1698—exactly a hundred and fourteen years before—having lived during parts of the seventeenth and nineteenth, and through the whole of the eighteenth century! We cannot vouch for the truth of these instances of longevity; but if we must not believe in them, what are we to think of this paragraph in a London paper of April 9, 1882?—'Mary Simms, who would have been a hundred and eight years of age next month, died at the workhouse at Portsmouth on Wednesday. Her husband and father were soldiers, the former being present at Waterloo. The authenticity of her age has been established by War Office records.'

Mr Guy, sometime rector of Little Coates, Lincolnshire, is credited with being the father, by two wives, of twenty-six sons and eight daughters. How many descendants the septuagenarian saw, the record sayeth not. Maria Sproutt, blessed only with two children, left behind her, at the age of ninety-five, fifteen grandchildren, forty great-grandchildren, and ten great-great-grandchildren; while the funeral of one Janet Cameron was attended by four generations of her descendants, numbering just two hundred.

Recording the death, in 1762, of the Hon. John Petre, Mr Urban informs us that this younger brother of Lord Petre was the eighteenth member of the family that had died of smallpox in the space of twenty-seven years. In 1798, was 'executed, behind his own meeting-house, at Grey-Abbey, near Belfast, in Ireland, for treason, the Rev. James Porter, a dissenting minister. His head was *not* severed from his body.' In the same year, Sergeant Mackay, of the Royal Edinburgh Volunteers, went over to the majority prematurely. 'The cause of his death originated in the treatment he received at the barbarous amusement frequent in that city on His Majesty's birthday called "making burghers;" at which time, and from the same cause, a gentleman of the royal corps of artillery unfortunately received his death.' More mysterious was the demise of the landlady of the *Three Stags*, in St George's Fields, London. Indulging in an afternoon nap behind the bar, she dreamed she saw herself come into a room in which she was sitting, and that she spoke to and shook hands with her second self. Whether it was her *eidolon* or not, certain it is that the next morning she was taken ill and died in a quarter of an hour. A Mrs Johnson went off without even that much warning, dying 'suddenly as she sat in her chair, and next day her husband as suddenly.' Even more of one mind were a Yorkshire pair, who were born on the same day, died nearly at the same hour, and—but that was a matter of course—'were deposited in the same grave'—a notification that would have befitted the announcement: 'At Prescott, Lancashire, Mrs Blakesley, aged a hundred and eight; Mrs Chorley, aged ninety-seven; and Mrs Bennet, aged seventy-five; they were intimate acquaintances, and all died within the space of twelve hours.'

On the 9th of December 1736, Basingstoke churchyard received the remains of a zealous churchwoman, Dame Box. 'When Dr Sacheverel

was cleared from his troubles, she clothed herself in white, and kept the same clothes by her, and was buried in them. During the Doctor's life, she constantly went to London once a year, and carried with her a dozen larks, as a present to that high-flying priest. Her corpse was adorned with oaken boughs, in memory of King Charles II. This loyal lady was not quite so provident as a gentleman whose coffin of heart of oak covered with red leather was made long before it was wanted. Such preparation for the end is not so unusual as one might suppose. A rector of Plympton not only bespoke his coffin six weeks before he needed it, but at the same time ordered the building of a vault, visiting the workmen every day until their work was completed. Mr Brookman was buried in an oak chest made for the purpose four years previously. Two days before his death, he walked with the undertaker to the churchyard to show him exactly where he wished to be laid; returning home, he had his chest out, superintended the cleansing of it, and that accomplished to his satisfaction, took to his bed and died. John Moody, who lived long enough to be called the Father of the English Stage, directed that his body should be interred in the burial-ground of St Clement's, Portugal Street, and a headstone set on his grave inscribed: 'Native of this parish, and an old member of Drury Lane Theatre. For his professional abilities, see Churchill's *Rosciad*; and for his memoirs, see the *European Magazine*.' He did not trouble to insure a libation to his memory, like the ancient Lumber-trouper, who served forty years in that distinguished corps, and bequeathed the troopers a crooked guinea, to be spent in punch and tobacco on the day he was laid under the turf.

There is something extraordinary in a man being successively condemned to suffer hanging, amputation, and transportation, and yet undergoing none of these penalties. Such was the fortune of George Chippendale. Sentenced to be hanged, he was respited, in order to have his leg cut off, to try the effect of a newly invented styptic. For some reason, the experiment was not tried, and he was 'pardoned, on condition of being transported for life;' a condition he evaded by dying in Newgate in 1763. John Dodley, of Worcester, experienced an unexpected deliverance of another kind. Born with a contraction of the tendons on one of his legs, he was obliged to wear an artificial limb for thirty years. One day, endeavouring to adjust a church-bell which happened to remain inverted, the rope pulled him up with such velocity as to break the bands that fastened his artificial limb, and in the same instant relaxed the tendon of the 'game' leg, thus rendering it as useful as its fellow for the remainder of his life, which extended to ninety years.

In 1798 there died in the Borough a man known by the name of Leeds. Once an officer in the army, he sold out to become a tea-dealer. Finding the occupation not to his liking, he entered the Russian service, but happening to kill a brother-officer in a duel, fled to England, where he was glad to earn a living by keeping the books of an eminent woollen-dealer. Sent adrift again by his employer's death, Leeds opened a chandler's shop, a venture ending in bankruptcy;

and after many chances and changes, turned cobbler, and plied the awl to the last—'a melancholy example of the vicissitudes of human life.'

THE HERRING-FISHERY IN ICELAND.

THOUGH the land in Iceland produces little except the grass which nourishes such animals as subsist thereon, yet the seas around it, and the lakes and rivers within it, teem with fish of various kinds. The fisheries for salmon, cod, herring, sharks, and whales are prosecuted with much vigour, though with varying success. Unfortunately, however, for the prosperity of the island, those engaged in these fisheries are not natives, but mostly strangers. For instance, the French cod-fishery around the Iceland coast is very extensive, and is carried on in large schooners and *chasses-marées*, which receive a bounty from their government on all fish proved to be caught there. A fine nursery is also thus encouraged for the training of seamen. Many English and Shetland smacks are likewise so engaged.

While the native Icelanders were until 1874 compelled to fish in small open boats, they are now liberated from the thralldom in which they were held under the monopolies granted to trading Companies of Danes by the Danish government, and have got one or two decked vessels; but this branch of their industry will take some time to develop. They have, however, the shark-fishing and salmon-fishing in their own hands; but the former is not very remunerative, and they are under obligation to strangers for the disposal of the latter, and so cannot by any means get the full advantage of the markets. The whale-fishing, while worth prosecuting, was in the hands of Americans; but they nearly extirpated the 'black' whale along the coast ten or twelve years ago, and the other varieties are not worth the trouble of capturing.

The herring-fishing has always been in the hands of the Norwegians; and, strange to say, although so much used and so much valued as an article of food by all nations in the north of Europe, the herring never has been, and is not now an article of food with the Icelanders. The only plausible reason which can be adduced for this, is the Icelanders' objection to salt—due to their fear of scurvy. All their preserved provisions are cured fresh either by drying or smoking, or pickled by souring; but herring cannot be cured without salt, on account of the large quantity of oil they contain.

As is well known, the herring has frequent and erratic migrations from and to different parts of the same coast; sometimes leaving the coast of a country altogether for a period, as was the case a good many years ago on the Norwegian fjords. Some such event may indeed have been the primary cause of Norwegians going to fish in Icelandic waters, though the exact period when they began to do so cannot be exactly fixed. There they could fish in the same manner as in their own fjords; for, as stated to the writer by Captain Otto Wathne—engaged in the Iceland fishery on his own account—'they [the Norwegians] will catch the fish if they come up to their very doors asking

to be caught; but they have not the enterprise of your Scotch fishermen, to go far out to sea in search of them at great risk in all weathers.' And yet they are hardy sailors.

The herrings are all caught in the fjords, none in the open sea. The Norwegian ships that come to Iceland are generally schooners, having the necessary complement of salt and barrels on board. After their arrival, they are partially dismantled and laid up at anchor, having first landed the curing materials at their various stations. These stations are mere wooden sheds built on the shore, and partly projecting into the water, with a platform or jetty on the side next the sea for discharging the fishing-boats. They are always situated where deep water comes close inshore, so that vessels may be loaded by a gangway from the jetty and still be afloat, the rise and fall of the tide in the north and east being only three feet.

The fishing-boats brought from Norway are smaller than those in use on our coasts, but larger than those of the Icelanders; and are fitted with mast, spritsail, and jib, all very light, as they are not expected to meet very heavy weather. The net is in one piece—a seine-net—with which the herrings are swept towards the shore. Should it contain more than the boats can carry, the ends of the net are anchored ashore, and the boats are loaded with as much as they can carry from within by bag-nets on the end of long poles; the remainder of the fish remaining safely inclosed in the net all alive for days until they are wanted, or the contents exhausted. The nets are of various sizes—from twenty fathoms long by five fathoms deep, to a hundred and fifty fathoms long by twenty fathoms deep, and are in use according to the depth of water at the shore to be fished. The nets are only of half-inch mesh, and are used in Norway for sprats and herring alike.

The fish when landed are at once packed *entire* with salt in the barrels, not gutted as with us. Although their curing is not so good as ours, this system involves less labour, besides less handling of the fish, which consequently are less broken. A good many Icelanders are employed to assist the Norwegians, but only as labourers for hire, whether in the boats, or loading vessels at the stations.

The period and direction of the Icelandic shoal, or *drave* as it is called in Scotland, seems to be identical with that of the Scotch—namely, from May and June on to September and October, and from the west coast round the north to the east coast. The northern part of their progress is at times within, and at times without, the line of the Arctic Circle; but they do not enter all the fjords on their line of march, seeming to avoid those which have either a shelving beach, or obstructions in the shape of sandbanks, rocks, or islands. Their favourite haunts are fjords having a clear sweep of deep water quite up to the shore. Of the former class are Hrutafjord, Skagafjord, and Eyafjord on the north, where there are no fishing-stations; yet in the first mentioned, where there is the trading-station of Bordeyri—by which name the fjord often goes—Captain John Coghill, the travelling agent for Messrs Slimon of Leith, who have developed a most extensive trade between Britain and Iceland,

saw the beach of the fjord on one occasion, a few years ago, piled for miles with dead herrings. The fish had been chased up the fjord by a shoal of whales, and had gone ashore in their terror. A similar thing occurred at Crail on the Firth of Forth between forty and fifty years ago; and being before the time of railways, the fish could not all be used, and had to be carted away for manure.

Eyafjord is not a favourite resort of the herring; but at Akureyri, the northern capital of Iceland, on 29th June 1880, the writer saw a few dozens hauled out opposite the hotel window. This was at the south or upper end of the fjord, from twenty-two to twenty-five miles from the Arctic Ocean, in comparatively shallow water. The fish were small—seven and eight inches long, but very delicate, and of fine flavour.

The herrings appear first off Isafjord, on the north-west of Iceland, in May or June, but varying in different years. The *drave*, coasting along the northern shores, proceeds round Langanaes (Longnose), the north-east point of Iceland, and down the east coast, but never on the south and south-west coasts. Sometimes by the end of August, always in September, they may be found in nearly all the eastern fjords, notably Eskjffjord and Seydisfjord, on which latter fjord the writer had, in the first week of October of the above year, an opportunity of observing the operations.

Seydisfjord is one and a quarter to one mile and a half wide, runs straight west for ten to twelve miles, and turns south three to four miles at its head, being inclosed by steep mountains, two thousand five hundred to three thousand feet high, all the way round on both sides, with deep water close inshore all along, except at the head and north-west corner, where it shelves a little, from the detritus brought down by the rivers at these places.

The placid waters reflecting the piled-up mountains give at first glance no indication of the life beneath. A large patch here and there inshore of white sea-birds, or the occasional splutter of a few herring-whales and young finners (rorquals), which do not spout very high, are all there is to tell that the water teems with fish of all sorts. No crowd of boats arriving in the morning and sailing in the evening; neither shouts nor laughter at landing-places; no hurry or bustle; and no need; the game is in their own hands, and they can regulate their work at will, whether to haul and cure, or to ship, as suits convenience; all very quietly—much diligence, but no hurry. All hands on board our steamer who can muster a line and a piece of herring for bait, are hauling in as fast as they can, cod, haddock, flounders, and halibut. Even a fine wolf-fish is sometimes so caught. Some of the officers, in a boat some distance from the steamer, hauled from forty to fifty large cod with four hooks in three hours. But this is a bagatelle. The water is alive with herrings. Where those sea-birds are sitting fishing at leisure, they are in absolutely solid masses, hemmed in by the enormous nets, one hundred and fifty fathoms by twenty fathoms. All their large nets are down; and they try to increase their number by sewing several of the smaller ones together; but not being deep enough—only five fathoms—to take the ground, are of

no use. Sailing-vessels are coming in; but they are too slow. Three steamers were at anchor for herrings on September 28, loaded up and left; the first of another detachment steamed up the fjord on October 9, and so on until the harvest was reaped.

The fish are very large—thirteen, thirteen and a half, and fourteen inches long, actual measurement, and weigh from twelve to fourteen ounces each. The gulls have some difficulty in getting proper hold for swallowing them. If by the head, they are all right, though costing a mighty effort to swallow. Many fish are found with the skin scratched off their backs by the bills of the birds, in the vain attempt to swallow them so held.

Upon inquiring whether the fish did not deteriorate in quality by being kept so long in captivity, say six weeks, and although alive, virtually without food; the answer was, that they were so very fat that there was no appreciable difference, at least in a commercial point of view. They are very fat and well flavoured, but have not the delicacy of flavour or texture of the smaller herring either in Iceland or Scotland. Such fish—small and fine—when found by the Norwegians, are quite as carefully treated in gutting and curing as by us, if not more so, the Norwegians being quite epicurean in their tastes as regards herrings.

THE ENFIELD COURT ROBBERY.

IN TWO CHAPTERS.—CHAPTER I.

‘WHEN are you going to return Lady Dasent’s visit, Aunt Frances?’ asked my niece Amy one lovely morning in August. ‘It is quite a fortnight since she called.’

‘In a day or so,’ I replied, knowing the duty must be performed, particularly as Lady Dasent had, since she called, sent us an invitation to a ball which was about to take place at Enfield Court. In my inmost heart I should have been pleased had Lady Dasent’s visit never been paid. We had lived in seclusion for so long, that I almost dreaded any interruption to the even tenor of our quiet existence. But Amy was eighteen, and just at the age to appreciate a little gaiety; and I felt it was my duty to set my own feelings aside, and allow her to enjoy the present to the utmost.

We lived just on the outskirts of one of the principal southern provincial towns, in a little paradise which some one had aptly designated the ‘Wren’s Nest.’ I thought it perfect, and would not have exchanged its peaceful beauty for Enfield itself, which was considered one of the finest places in the county.

Owing to Lord Dasent’s very delicate health, the family had been absent for some years; but directly they returned, Lady Dasent had called on us. The Court was barely a mile distant by road, and we were really their nearest neighbours. It behoved me, therefore, for Amy’s sake, to make an effort and return her visit.

‘What do you think of our going to Enfield this afternoon, Amy?’ I said presently.

‘I think it would be delightful,’ she replied. ‘Shall we walk or drive?’

‘Drive, decidedly,’ I rejoined. The day was

lovely, and I inwardly hoped that Lady Dasent might be enjoying its beauties herself, and that we might thus continue our drive, having done our duty by leaving cards only. But my hopes were disappointed. Lady Dasent was at home; and we were ushered with due ceremony into her beautiful drawing-room, where we found her most graciously inclined towards us both.

Her daughters were playing lawn-tennis, she told us. Would we like to join them on the terrace? Very gladly would I have declined; but a glance towards Amy decided me otherwise. Very probably, my diminutive groom and ponies would be entertained hospitably during our detention; and I could quite fancy, after the splendours of Enfield, that Joseph would return home signally dissatisfied with the humble ways at the Wren’s Nest.

Accompanying Lady Dasent, we found ourselves in the midst of quite a large party of young people, some playing tennis, but the greater number merely looking on. Amy was swept from my side immediately; but my anxious eyes followed her, and with pleasure I observed the cordiality with which the Misses Dasent welcomed her.

By-and-by I saw her standing under a lime-tree at some little distance from where I was seated. She was dressed in white; and as she stood in the half-shade, half-sunshine, there was a look of ethereal beauty about her.

‘How very pretty your niece is, Miss Courtenay,’ Lady Dasent observed.

‘Yes; I think she is rather pretty,’ I replied.

Some one else thought so too. Just as Lady Dasent spoke, I saw a gentleman introduced to Amy; and while we remained, he determinedly maintained a close proximity to her side. He was young, good-looking, and evidently bent upon making himself very agreeable to my niece.

Hitherto, Amy had lived a life of complete retirement. I had guarded her with a jealous care from all contact with any outward influences that might prejudice the future of my darling. She had been consigned to my care by her mother on her deathbed, when an infant of a few months old; and I had accepted the charge, vowing to be faithful to the utmost of my ability.

I had loved her mother; but I had adored her father—my youngest brother—who had gone out to India with the fairest prospects, and come home, after being there only for a few years, to die. Out of a large family, I was the only one left who could possibly have undertaken the absolute charge of Amy.

And here was I, with my youth far behind me, an unloved old maid, until the child came to me, and in the clasp of her little chubby arms I seemed to grow young again myself. My sorrows became dim in the distance as my charge grew; every day and hour adding to my devotion to her, and, thank God! to her love and affection for me. We were not rich, but we had enough; and I was enabled to have a governess for Amy, so that not even for part of her education had she to leave me. Sometimes, I wished she had some companions of her own age; but when I mentioned it, she always rejected the idea of such a necessity. She was perfectly happy. What more did I want? Nothing, except to insure her continuing to be happy all the days of her life.

Lady Dasent's desire to cultivate our acquaintance presented at least one advantage for Amy; the Misses Dasent were about her own age, and, judging by outward appearances, nice lady-like girls, who seemed anxious to be friendly with her. Still, I shrank from giving encouragement to the intimacy between them; for though Amy's birth was that of a lady, still the Misses Dasent were undeniably above her in rank; and—perhaps from an old-fashioned idea on my part of possible patronage—I rather threw obstacles in the way of any sudden friendship between them.

But I am anticipating, and must revert to the introduction I had witnessed in the distance between Amy and Mr Alfred Mauleverer, which was the name of the individual I before alluded to. I did not make his acquaintance that afternoon; that was an honour reserved for the following day, when he, accompanied by two of the Misses Dasent, came over to the Wren's Nest to invite Amy and myself to a small afternoon party.

It was the beginning of many visits both on their part and our own; in fact, hardly a day passed without our seeing at least Mr Mauleverer, who invariably found some pretext for coming over to us, if we were not to be at Enfield. And then came the ball at Enfield—Amy's first, destined to be a most eventful one, and to which she went arrayed in simple white.

I was not altogether comfortable on the score of her growing intimacy with Mr Mauleverer. Perhaps he was trifling with her; perhaps he was not in every way desirable himself. A thousand disturbing possibilities kept shooting through my old heart, as I sat watching my darling at her first ball, looking radiantly pretty, while Mr Mauleverer redoubled his devotion, and immolated himself so thoroughly at her shrine as to insist on taking me into supper—a piece of civility which I duly appreciated.

Never before had I seen the Dasents' celebrated gold plate, which was on this occasion fully displayed. It was magnificent. Such tankards and salvers of solid gold, to say nothing of plates, spoons, and forks, all apparently of the precious metal. Our conversation naturally turned upon this display; and just as we were admiring it, Florence Dasent happened to join us.

'Miss Courtenay has been admiring the plate,' remarked Mr Mauleverer.

'Yes; isn't it beautiful?' she replied. 'But really, I think pretty china would be almost nicer. I believe papa would prefer it; but we can't get rid of our plate, simply because it is entailed; so are mamma's diamonds.'

Lady Dasent was wearing her diamonds that evening. From my quiet corner in the ballroom, I had specially noticed the necklace, which was rather a tight circlet round her throat, set in squares of a formal but of course magnificent description.

A few trifling remarks followed; and then Mr Mauleverer conducted me back to my seat, in the vicinity of which we found Amy, to whom Mr Mauleverer was engaged for the next dance.

I must say they looked a charming couple as they moved away. I suppose my eyes were expressive of my thoughts, for Lady Dasent's voice close beside me seemed to echo them.

'They make a good pair, don't they?' she said. 'Ah, Miss Courtenay,' she continued, 'I am afraid you must not expect to keep your niece always; some one is sure to carry her off soon.'

'I am in no hurry for that time to come,' I replied.—'But, Lady Dasent, do you mind telling me one thing: who is Mr Mauleverer?'

'Who is Mr Mauleverer?' repeated Lady Dasent, with a shade of sarcasm in her voice. 'Well, my dear Miss Courtenay, I believe he is of very good family, very well off; and I know he is very charming, and moves in the best society. You may be quite sure, had he not been very desirable in every way, he would not have been our guest.'

Some one else just then claimed Lady Dasent's attention, and she moved off, leaving me to digest at my leisure the satisfactory remarks she had made relative to Amy's admirer. Very good family—very well off—very charming, and so forth. I was glad to hear it; and could scarcely avoid a feeling of exultation when, on our return home, Amy told me that he had asked her to be his wife, and she had accepted him.

Tired as I was after my unwonted dissipation, sleep seemed to have forsaken me; Amy's engagement was all I could think of until daylight began to struggle into existence; then I suppose I fell asleep, and might have slept for hours, had not my old housemaid Margaret burst into my room without any ceremony, and awakened me with the startling tidings that Enfield had been on fire; and that the gold plate, also nearly all Lady Dasent's diamonds, had been stolen!

It seemed altogether too dreadful to be true; but very shortly afterwards, Mr Mauleverer himself appeared, and fully confirmed the tidings. He had distinguished himself greatly by his bravery in endeavouring to extinguish the flames, and in doing so had burned his right hand rather severely.

'I thought you might hear an exaggerated account of it, so I came over at once,' he observed, with a glance towards Amy.

'Who discovered it?' I asked. 'What can have originated the fire? and above all, who can have taken the plate?'

'And the diamonds?' added Amy.

'That remains to be seen,' replied Mr Mauleverer. 'On my way here, I telegraphed to Scotland Yard, and no doubt a sharp detective will unravel the mystery.'

Partly in order to make it more convenient for guests at a distance, partly because Lord Dasent himself objected to late hours, the ball had begun at the unfashionably early hour of nine o'clock; by half-past two it was over; and by three o'clock comparative silence had reigned over Enfield. The butler had judged it safe—never dreaming of danger—to lock up the supper-room, the shutters of all the windows being strongly barred as well. With an easy mind, and the key in his coat-pocket, that functionary retired to bed, while the rest of the servants gladly followed his example.

Neither bolts nor bars, however, defended the diamonds. Lady Dasent replaced them with her own hands in their cases, which, without any anxiety whatever, she laid upon her toilet-table. To-morrow, they would, as usual, be deposited in the safe, where they were ordinarily kept. She

had dismissed her maid directly she came to her room; one of her daughters unclasped the circlet from her throat; and shortly afterwards—as it came out in evidence—Miss Dasent left her mother's room, crossed the corridor, and was just about to enter her own room, when, in the darkness, some one brushed past her. The circumstance did not alarm her; it was no doubt one of the servants; so she thought no more of it.

Lady Dasent's dressing-room adjoined her bedroom; and her account of the affair was that, a few minutes after she had got into bed, she distinctly heard the handle of her dressing-room door turn; and she fancied she heard a very quiet step in the dressing-room, which in a sleepy way she fancied was her maid.

Lord Dasent heard nothing—had nothing to tell; he wished he had. If any one had brushed past him in the corridor, or he had heard steps in the dressing-room, there would have been neither robbery nor fire. As it was, the stealthy footsteps must have approached the dressing-table, and with a deliberation almost incredible, some one must have opened the cases and abstracted the contents. The circlet, the bracelets, and a pair of magnificent earrings—all were gone. The gold plate had also been cleverly carried off; only a few minor articles having been spared.

At first, all the energies of the household were directed towards subduing the fire. It evidently had its origin near the supper-room, which chanced to be directly below Lady Dasent's rooms. At all events, it was owing to her being awakened by a strong smell of fire, that the alarm was given in time to save not only the house but some of the inmates, who might otherwise have perished in the flames. And from this fate it appeared Mr Mauleverer had a narrow escape. He had behaved 'splendidly,' so the Dasents said; and as my nephew-elect, I was proud to hear it.

PAVEMENT PORTRAITS.

VIOLET CHARMION.

I STOOD one hot June day, years ago, in the shade of the east end of the church of St Paul, Covent Garden, talking with an old schoolfellow whom I met accidentally at that spot—a dear friend, who now, alas, lies at the bottom of the Red Sea—and the news which we were exchanging with one another was sufficiently engrossing, and the pleasure of meeting after a long interval of separation sufficiently absorbing, to blot out for a time from our notice the crowds of carriages and pedestrians which were passing and repassing before us in this busy corner of London, at this busy time of the year. We talked long and cheerfully. The world was not grown gray to us; it was still young, and arrayed in that glorious garment of youth—Hope. Stories of mutual friends of our recent boyhood were told and listened to; and the long hand of that honest old church-clock had made more than a complete circuit of its face ere our talk flagged. Indeed, it was the striking of the hour of five which roused us from our recollections of other days and early pleasures, and caused us to pause for a moment in our talk,

to consider the time and what each of us had actually to be doing.

During this pause, we turned and faced the narrow entry, on the other side of the road, which leads to that avenue of Flora and Pomona where gifts of both those goddesses can be had all the year round—for a consideration; and we then became fully aware of the bustle and business in front of us. A block occurred in the road, and for a moment there was a lull, as the traffic was stopped through the entanglement of two or three carriages, and in that moment she appeared!

Clad all in white.—How is she to be described? My pen seems such a barbarous, rough instrument wherewith to attempt to produce a likeness of this lovely vision!—Clad all in white. A straw hat, adorned by a magnificent white feather, shaded the fairest face I had ever seen. A white Cashmere dress, neatly fitting, and gracefully gathered up into loops as regards the skirt, concealed and displayed a form of singular gracefulness. White gloves encased the most exquisite little hands that ever chose 'sixes' at Piver's or Houbigant's; and a ruffle of white lace encircled a noble throat. There she stood, Purity itself! In her hands she held a wealth of roses, and here was the colour in the picture. Roses not made up into formal, if beautiful, bouquets, wired and arranged for opera or ball; but evidently chosen by the fair bearer of them blossom by blossom, just as they had been cut from their bushes or trees, with a wonderful appreciation for their form and hue. A wealth of rippling golden hair, looped up behind, but apparently impatient of restraint—for one vagrant tress had escaped, and lay languid on the right shoulder, looking for all the world as if waiting for some zephyr to come and play with it. Her complexion was pale; but a flush which spread itself over her cheeks as she watched the disentanglement of the carriages, was a concentrated sunrise in itself.

My friend and I with one accord exclaimed: 'What a lovely girl!' and then we became silent. The lady, it turned out, was waiting for her carriage; and while this was being fetched, quite a semicircle of admirers gathered round her at a respectful distance; for there was that in her face and whole appearance which commanded respect as well as admiration. An old dame, of some seventy years or more, rugged as a gnarled oak, and ruddy as a Ribstone pippin—one of that race of female carriers apparently indigenous to Covent Garden Market—put down her basket, folded her arms, and indulged in a good stare, enjoying the sight, to judge by the look of pleasure in her twinkling old eyes, as a thing which did her heart good. The young women who mind the stalls at this part of the market stopped making up their nosebags, and apparently nodded to each other any amount of 'Oh! I says!' and 'That's something likes!' The work of the market was in danger of being stopped by the lady.

But the carriage came—an open carriage, with an elderly lady in it, half asleep; and the steps being let down, the white figure mounted into the vehicle and seated itself. While the old lady was giving some direction to the footman, I saw the young lady bow, blush, and smile; and

North. I fervently assent. Mrs Helmsley at least is a partial contradiction to my assertions. But you can't crush my theories so easily.

Helm. I do not want to crush; I wish to convince. I do not think I am of a weak nature, or easily swayed; but I believe that I am much the better for the kindly influence of a gentle woman. I never imagined, in the days when I was a scoffer and sceptic regarding married happiness, how much pleasure could be found in the companionship of an intelligent, well-informed woman. I know now, and I wish you did.

North. My dear fellow, we are getting far too serious. I do not wish or intend to marry—

Helm. Ha! I have just hit on an idea you ought to appreciate, North. I have not forgotten your old taste for studying statistics, which I always considered dreadfully dry work. I happened, however, last week to be looking at a statistical table neatly introduced into an article on Population, and was struck by the fact of the immense number of unmarried women of all ages there are in this country. Looking at the number as a whole, it is positively appalling. Now, is it not the duty, the unselfish, disinterested duty of every man to save *one* woman from being an old maid? Of course, there are some women very well suited to fight the battle of life for themselves, and who are very well content to do so; but there are others who cannot stand alone; while, with some one to cling to and look up to, they may gain a certain strength and confidence, and feel much happier and safer than when drifting alone on the sea of the world, knocking up against obstructions, and buffeted by the stronger craft.—Don't laugh, North! I'm not poetical, but I *do* feel sympathetic. Why don't you and others like you take a weaker vessel in tow?

North. My dear fellow, the young women of the present day are not such as to induce a man of sense to link his existence with any one of them. No soul beyond dress and personal appearance; no ideas beyond driving, promenading, dancing, and flirting; no ambition beyond making 'a good catch.' A fig for the sex! with their flowers and feathers, smiles and simpers, airs and graces! They do very well to dance with or flirt with—I can amuse myself that way; but for a closer connection—not for me!

Helm. I must admit that there are women who answer to the description you have given. But are you compelled to choose a wife from among them? Are there not many quiet sensible girls, pretty, and clever to boot—well brought up, well trained in household affairs and domestic economy, yet with souls sufficiently above the kitchen, and minds well informed enough to make them fit companions for any reasonable man? I know of many such—many who could contribute to any man's happiness, but who remain unmarried simply because men will judge of a class from an individual, and because they see *one* giddy extravagant girl, studiously avoid any close observation of or comminglement with the sex, and so never come across one of the reasonable, home-loving, intelligent sort. And as to the so-called 'fast' style of girl—my hatred of the word is only second to my dislike of the thing—I think it is in a great degree owing to men that they are what they

are. If they see that men regard them as mere dolls, made to serve for an hour's amusement, or to act as mere chatting, dancing, trifling machines, what wonder is it that they behave as such? I think we do women injustice, North. There are clear heads among them; there are clever brains; there are noble characters—good, true hearts. I have known many women worthy of the friendship or the love of any man. If they be not all they might and should, we may at least treat them as reasonable and sentient beings, our equals in most things, our superiors, heaven knows, in many; without any nonsense about angels or anything of that sort. Perhaps, seeing themselves so considered, they might try to work up to the standard of some of their nobler sisters—women whom we must all respect.

North. You would not expect me to wed one of the strong-minded sisterhood, surely—blue spectacles, stiff curls, sharp tongues, and all the rest of it; or a gushing young miss in her teens?

Helm. My friend, I fear you are losing not only your ground but your patience. No; at your age you would have little sympathy with a girl of eighteen or thereabouts, unless she were an uncommonly gifted one; and your other idea is a purely fancy sketch. I would say: Marry a woman some five years your junior, one who has made her own home happy, and can make yours so; one who, having been a good daughter and sister, will be a good wife. I do not know that I should ever have fallen in love with Fanny, had I only known her as the young lady with long curls, who played so prettily and sang so sweetly. But when I was admitted into the home circle, and saw how her bright kindly influence cheered her careworn father, helped her invalid mother, and guided those wilful young brothers of hers, I began to feel as if something of the sort might be good for myself. My principal enemy had been self-love, backed up with various baseless doubts and fears. Single life is a capital thing for feeding and fostering selfishness.—But I think we are wandering from the main question, and this is too much of an oration.—Did you speak, North? I beg pardon.

[*North is, however, all but inaudible, the only distinct words being 'dozen,' 'country,' 'population,' 'overcrowded.'*]

Helm. Oh, if you bring Malthus & Co. to support your theories, I might as well call the Scriptures to the assistance of mine; and as we should be each doing a very superfluous thing, I think we will not, which you must acknowledge a deed of grace on my part, as the arguments I should bring forward would have the advantage not only of a higher authority but a greater antiquity. And talking of age, what sort of creature is the *really* old bachelor? I suspect a good many regret their state of single-blessedness, when they find themselves left behind, out of the race, past finding pleasure in the ways they were used to; and wish they had a home and ties of their own, some one whose care and companionship they could really claim. Imagine yourself, North, five-and-twenty or thirty years hence! Now, what say you?

North. Don't croak! Why look into the future? I am what I am, and feel happy enough, as a

rule. Every dog has its day; may not I have mine? And there is something you have forgotten, Helmsley, in all your inveighing against selfishness. Cannot an unmarried man do far more good, having more time and money at his disposal, than a married ditto? Cannot he be far more of a benefactor to his kind—do more for the world at large?

Helm. He can; but does he? I will say nothing; you shall ask yourself, and your own good sense will answer.

North. I freely admit I am a selfish wretch; but there are some of the sort I mentioned.

Helm. Yes; one or two; bestowed on us to show us what we might and should be. Not that all our best men and greatest benefactors have been single men, North. A statistical table might be useful in this case, to convince unbelievers such as you. I do not think my public life has suffered because my private life has been a happy one; and I think I shall benefit mankind about as much as I can, by training my children to bear their part well in the world's work, letting them learn the great lesson of helping to bear the burdens of others, as well as blithely carrying their own. And who knows? They may be living illustrations of my theory, that members of a family where good influences have held sway, will unconsciously carry those influences with them wherever they go in the world.—Forgive me, old fellow, if I seem to be sermonising, but we must sometimes look on the serious side of things. Don't you indorse my opinion?

North. Well, I do; and I thank you, old friend, for the sensible and reasonable way in which you have put things. You have at least given me food for thought.

Helm. Ah! very good.—But here we are, out of the Park, and nearly at my house. Come in and have a cup of tea, and we'll have some music, and perhaps a pipe afterwards.

THE LIGHT-GLINT ON LOCH LOMOND.

THE beautiful Queen of Scottish Lakes has, we are told, 'waves without wind, fish without fins, and a floating island;'* but it has also other mysterious secrets which still remain hidden from us. Among these are the many drifts and under-currents, the cold and warm eddies, the deep holes and crevices, which exist in the lake, and are only partly known. Often when the summer season is at its height, we hear of some catastrophe involving loss of life by the sudden upsetting of a frail boat on Loch Lomond; and afterwards, that the most strenuous efforts to recover the bodies of the victims have proved fruitless. The dead sleep their sleep far down in the dark depths of the waters of the Queen of Lakes, and jealously she holds the victims of the treacherous blasts that sweep over her bosom. The terrible gusts which rush down the mountain valleys come without the slightest warning, so that

* Waves without wind—the unsubsid result of sudden squalls; fish without fins—namely, adders, which occasionally swim from island to island; a floating island—an agglomeration of weeds, roots, &c., that once existed on the Loch.—ED.

even the most experienced boatman at times becomes a prey to the death-grip of the dark waters.

Many must remember Dougal—or 'Tougal,' as he called himself—the old fisherman at Luss, with his wrinkled face, bronzed by the sun of at least seventy summers. A rare old specimen of a true Highlander was Dougal. A family of soldiers, and belonging to the Forty-second Highlanders (the Black Watch), his father was one of eight brothers who fought at the disastrous battle of Fontenoy. Six of them died a soldier's death on that fatal day; a seventh was seriously wounded, yet survived to return home; and the remaining brother, Dougal's own father, also bore such scars upon him as showed that he too had been in the thick of storming the French intrenchments. Dougal himself would have been a tough antagonist for any foe to meet, for fear was a thing unknown to him. Now, he sleeps his long sleep in the little churchyard at Luss, where the ivy and flowers grow luxuriantly over the green graves, and high up the summer wind sighs through the tall trees that shade his last resting-place.

One reminiscence of Dougal always clings to me, and I never visit Loch Lomond without recalling it. Dougal was a keen fisher, and no man knew the waters of Loch Lomond better. There was not a feeding-ground or an eddy which Dougal did not know, as well as the salmon or trout which frequented it; but he had a strong dislike to see his favourite waters whipped by an inexperienced hand; and although he accompanied many fishing-parties, he jealously reserved his pet spots for those who knew the difference between the fall of a fly upon the water and the splash of a stone. For the ordinary run of visitors he reserved other waters, where his fish ran no fear of being disturbed, and where the inexperienced could lash the waters to their hearts' content.

Dougal was not of a very communicative nature; but occasionally, to those whom he knew well, he would open up; and often a deep earnestness would mark the account of some of his adventures. He was keenly susceptible to the beauty and glory of the surrounding scenery, and a hushed silence would steal over him when the lights of heaven rested on the mountain and valley, and the lake mirrored them on its calm surface. It was on one of those exquisite evenings, such as one seldom sees elsewhere, when the Queen of the Lakes had decked herself in all her beauty, that Dougal and I quietly turned the boat towards Luss, after a pretty successful day's fishing. The mountains were bathed in the softest light of the setting sun; the surface of the lake was like a mirror, on which the wooded islands looked like floating fairy homes. Far away up the Loch, range after range of mountains faded into the most delicate purple, until in the extreme distance they passed as it were into air. Involuntarily, Dougal stopped rowing and rested upon his oars, as the great shadows fell deeper and deeper upon the water. Some time elapsed before the old fellow resumed rowing, and indeed twilight had set in.

'If you wadna mind, sir,' he said, 'I would like to pull round by Inch Murrin before we go home.'
'All right, Dougal,' I replied. 'It would be a pity to hurry home on such a night as this.'

'Ye're right there, sir,' said Dougal, lapsing into silence.

I was so much wrapped in my own thoughts, that it did not occur to me at the time as something unusual for Dougal of his own accord to pull so far out of his way as Inch Murrin. It was not until we were off the island itself that I noticed that the poor man was very much affected and that he wiped his eyes with his shirt-sleeve.

'Hullo, Dougal!' I said; 'what ails you, man? Are you ill?'

'Na, na, sir,' he said. 'I'm well enough. But ye maun bear wi' me, sir. I'm kind o' minded to-day o' my poor laddie that was drowned here langsyne.'

'Indeed, Dougal! I never knew that you had lost a son in Loch Lomond.'

'Deed, sir, and I did; and it is twenty year this very night.'

'How was it, Dougal?' I asked.

'How it happened,' he answered, 'naebody kens; but it was God's ain doing that I found my laddie's body. It was just here at this very spot where we now are; and deed, sir, I would never have had the heart to boat all these years on the Loch, had I kenned that my bairn was lyin' dead at the bottom of it. Well, sir, it was a braw simmer's day when my laddie left Luss in the wee boat to take owre some fishin'-gear to a gentleman near the Balloch end o' the Loch; and frae that trip he never came back. I mind there was a bit o' a squall in the evenin'; but neither me nor onybody else fashed about that. But the laddie didna come home that night; and when next day our boat was found capsized, and driftin' awa' up the Loch, I kent that a mischance had befallen our bairn. Me and my neighbours went off at once to try and hear tidings o' him. We put in at a' the islands, and awa' along baith shores o' the Loch; but couldna hear tell o' him. We then got out the irons, and grappled and searched every corner between Luss and Balloch; but not a trace could we find. We tried until the neighbours said it was no use searching any more, and we must just bide and see whether the body wouldna come ashore o' itsel'.

'Sair, sair did my auld woman greet, and little heed could I gie to my wark; but I aye wandered about and up and down the shore seek, seeking. Well, it was just the fourth day after we found the boat, that I pulled awa' out among the islands a' by mysel'. It was a Saturday night; there was not much wind, but it was a dark night, and I thought I would go the length of Inch Murrin. Just as I reached the spot we're at now, sir, there came the queerest glint o' light upon the water I ever saw. It came straight down from the lift, and lighted up one solitary spot on the Loch for two or three seconds; and I knew it was God's hand pointing out to me where my laddie lay. I canna say what it was—it wasna fear—but my heart seemed amaist to loup to my mouth. I had naething in the boat to grapple wi'; but I rowed home as hard as I could, after I had gotten the exact bearing o' where the light had been. I told naebody, not even his mother, o' what I had seen, for I was dazed wi' my ain thoughts; but next mornin'—though it was the Lord's day—I was up wi' the first o' the daylight, and awa' out to this

very spot. I put down the grapplin'-irons; and, O sir! the very first pull I struck something heavy. I kind o' prayed to the Lord to gie me strength; and I took heart, and I pulled up the iron—and there, at the end o' the grapplin', was my puir dead bairn! I can never pass here without thinking on that night, and the light which God sent down upon the water!'

I let no word of mine disturb the poor old man's thoughts, as I took the oars from him, and, leaving him to sit silent in the stern of the boat, rowed slowly into Luss.

AN OLD GARDEN.

SOMEWHERE in the Past so golden,
Whose sweet memories are my own,
Was a garden, large and sunny,
Filled with blossoms, whence the bees
Gathered richest stores of honey,
And the rose-shrubs grew like trees;
With fair petals round them strewn.

Sloping downwards to a river,
Grassy terraces were there;
And great beds of daintiest flowers,
Pansies with their purple glow,
Palest woodbines wreathed in bowers;
And the streamlet ran below,
Singing to these creatures fair
Through the blessed summer hours.

You could wander at your leisure
With a deep and quiet content;
You could lose yourself in sweetness;
Hedges of the May rose grew
With a lavish, full completeness;
And bright lilacs, steeped in dew,
Shook above your head, and bent
To each wind with very pleasure.

Softly in the verdant mazes
Of green walks your footsteps fell;
And the murmur of the river,
Like a song of love and rest,
Seemed to warble on for ever;
Then some bird with russet breast
Startled, flew across the dell,
From its bed among the daisies.

Then in autumn what a treasure
Of all sweetest fruits you found
Hanging from each laden tree,
Ripening on the sunny wall;
And you picked them at your pleasure.
They were free to you and all,
As the sun and wind are free,
Scattered in rich plenty round.

Ah, those days of untold sweetness!
Ah, those hours of Hope and Rest!
Who shall tell their wondrous beauty?
Who shall bring again the Past?
Years grow swifter in their fleetness,
And our spirits murmur sadly
That 'the olden days were best.'

TROPICAL BRITAIN.

It is a common remark, that a former dweller on the earth, were he permitted to revisit scenes once familiar, would find them in many instances changed out of all knowledge. We may with equal justness reverse the remark, and find it applicable to ourselves, were we taken back through the scenes of the historic past, and especially the long ages of the geological periods. Such glimpses of the past are not unattainable. All the principal geological and climatic changes which in succession have passed over the surface of the earth, have been self-registered. Successive landscapes have as it were photographed themselves upon the sensitive plate of the earth's successively renewed surface; their impressions lie buried beneath our feet everywhere, or traced on hill-slopes all around; and where uncovered or detected, though the lines are in many cases blurred and indistinct, to the trained eye of the student they unfold scenes which stand out before the mind with singular distinctness.

How fascinating the interest of endeavouring to recall the long past! Let us, therefore, imagine ourselves transported to the Britain of the Eocene period, and under the guidance of the most recent discoveries and conclusions of geologists and others, picture the scenes which would then meet our view. It is B.C.—we know not how many tens of thousands of years. One thing we are certain of—it is a long distance on this side of that chaotic period, millions of years ago, when, according to Mr G. H. Darwin and Professor Ball of Dublin, the earth, a huge molten mass, gave birth to the moon; and mother and daughter hung perilously near each other till the latter began that retreating movement which she still continues. The Primary and Secondary periods had already done their work in moulding our earth into habitable conditions for higher and higher forms of life. We are at the dawn (*Eocene*) of the Tertiary period, in whose later development man appears upon the scene.

But as we find our way to what is now British soil, and look around, how difficult to believe that we are in Britain's latitudes. For on every hand we see the rich and luxuriant life of the tropics; and the hot air smites us with faintness. From the teeming soil springs a bewildering variety of vegetation, and unfamiliar species appear everywhere. We recognise with astonishment forms of vegetable life which at present we naturally look for only in sunnier climes. When we examine closer, it seems, indeed, as if the plants and flowers of all regions of the earth are gathered around us. To see the nettle-trees, but especially the honeysuckle-trees (*Banksias*) and the leathery-leaved gum-trees (*Eucalypti*), we might fancy ourselves in Australia with its characteristic evergreen vegetation. The weird shapes of huge cacti, again, transport us to the regions of Central America, parched with frequent droughts, while the fig-tree at our side speaks of the shores of the Mediterranean; the palm yonder leads the thoughts to Africa; and that bread-fruit in the distance awakens visions of the beautiful scenery of the islands of the South Seas. Twining round the tree-stems, flinging their tendrils from branch to branch, creeping, twisting, interlacing everywhere, wreathing themselves in myriad graceful festoons, gorgeous with flowers of every hue, and making our forests as impassable as those of South America, are those wonderful climbing-plants, amid which veteran explorers might recognise their most inveterate foes.

And withal, the trees and plants of temperate climes abound also. And just as the British traveller of to-day in tropical latitudes welcomes the sight of them as old friends, linking him with the temperate regions which are his home, so in that far-back Eocene age, amid so much to make us doubt whether we are on British soil, we welcome the sight of the beech, the elm, the chestnut, and the oak. The air is alive with the hum of insect-life characteristic of the tropics. Glancing, flashing, gleaming in the sunlight, many of them rivalling in colour the flowers

over which they hover, these ephemeral creatures are fed by, and in their turn help to feed, the profusion of living forms which the prolific heat engenders.

And if the vegetation around is strange to us, stranger still are the animals and the birds we observe from time to time. Even while we stand entranced with delight at the rich and varied beauty of the forest scene, or the view by the sleeping waters of a lagoon, the ugly form of an alligator is seen floating like a log, with cruel watchfulness intent upon his prey. Yonder, again, a splash is heard, and there glides forth on land or water some fierce monster, of a shape which suggests that the goblins and dragons fabled by primitive races were not drawn wholly from imagination.

Lingering still in the Britain of the past, we must beware of bathing in this noble stream, whose waters, bending round in graceful curve, have here left a clear stretch of sand and gravel, and yonder are swept by the overhanging luxuriance of the forest. Safe, tempting as it looks, the crocodile and its cousin the gaviol, with long, flat, ugly muzzle, are not far off. Peeping through the forest branches, rustling the leaves as they steal down to drink, we catch glimpses of bright graceful creatures not unlike the deer and the antelope, and probably the progenitors of these. Curious it seems to catch sight of one of the oldest and least changed of still living species, an opossum peering down upon us from the branches overhead; while we discover with surprise that animals like the kangaroo are native to these shores. We seem to be in half-a-dozen different regions of the earth at once. Places as distant as the Malay Peninsula and the forest recesses of South America, are brought to our door, when we see in these latitudes the tapir, for example, with his long flexible snout and thick hide, feeding greedily on the tender tree-shoots. High overhead, in the serene air, floats the vulture, looking for the dead. Down stream, kingfishers flash to and fro with gleaming plumage; and herons stand watching for their finny prey. Birds shaped like geese, but with what resemble teeth upon their beak, flounder in the water; while in the open glades feed others, huge and wingless, like a now extinct species in New Zealand.

And when, emerging from the forests, we stand on the shores of the shallow Eocene Sea on the south-east, we find it also teeming with the life of tropical as well as temperate climes. Flights of gulls crest its waves, or hover over it, dashing down from time to time to seize an unlucky fish. 'Gigantic sharks, rays, sword-fishes and sturgeons' tumble about in its waters, and find abundant prey; while among them is a peculiar armour-clad fish. Gliding in graceful undulations are sea-snakes twelve feet long; while the number of turtles is countless. The nautilus frequents the seas; the cowny, minute and burdensome coin of India, abounds upon the sand beneath our feet; and other tropical shells, as the cone, volute, olive, and large spindle shells, seem to be indigenous to the shores.

Nor are these the only features of the scene fitted to fill us with surprise. There are many other characteristics of British scenery and geography in that Eocene period which startle us

by their contrast with the present. What a rude shock, for example, to our insular exclusiveness and sense of insular security, to discover that Eocene Britain is not an island! Not only do Ireland and all the islands to the west and north form an integral portion of it, but it is joined on the south-west to Bretagne. From the east of Scotland to Norway extends a great valley covered with forests, and watered by a noble river receiving its tributaries from the ravines of what are now Norwegian fjords and the firths of Moray and Forth. And stranger still, there is a land-connection, broadening as we follow it northward, extending from the north-west of Scotland by way of the Farøe Isles and Iceland, to Greenland and the northern portion of North America.

And while our land forms a portion of two continents, the coast-line of Britain is at the same time far more extensive in these Eocene times than now. The sea tossed and moaned far distant from these cliffs and bays of to-day. Many miles out beneath the Atlantic are the old shores of England and Ireland. Land's End is thus not the land's end, but a lofty inland plateau breaking away probably in terrific precipices on the south and west; and stretching away from the base of these is an undulating plain covered with dense forests, its bounds washed by the remote Atlantic. Northward, where we expect to see the gleaming waters of the Bristol Channel, we behold a wide valley, along which the waters of the Severn flow, till at a point farther west than the now westmost part of Ireland, they join the ocean. Eddystone Rock needs no lighthouse. It is probably a lofty mountain peak. Torquay is far inland. All the delightful bays and pleasant health-resorts of the south-west of *our* England are many miles from any sea.

We look with deep interest and curiosity to see how much of the present well-known scenery of mountain, plain, and valley can be identified; and under the guidance of Professor Dawkins and others, discover that the general outlines of English, Scotch, and Irish landscapes are much more striking, bolder, more abrupt than now; not having been yet smoothed by the action of the ice of later periods. We gaze with wonder not unmixed with awe on the wild grandeur of the mountain scenery of Wales, Cumberland, and Western Scotland, in the dawn of this period. Many of the mountains of the Hebrides are active volcanoes. Volcanic agency has built them up. Hence we see them as groups of cone and dome like shapes, like those of Auvergne of to-day, 'rising above the forest which spread from these rugged Alpine heights, far away in one mass of green, broken only by the rivers, to Ireland and the remote coast-line of the Western Sea.' But their height fills us with astonishment. See that volcano of Mull, of which but a fragment now remains, grand doubtless, in its way, but insignificant when compared with the ancient magnificence of the mountain. It has been calculated—by Professor Judd—as from ten to fourteen thousand feet high, inclusive of the cone rising above the trees in the distance yonder. These Welsh, Cumbrian, and Scotch mountains are more than twice as high as in degenerate nineteenth-century

times. Such at least are they, according to one geological authority, in the period immediately succeeding the Eocene—namely, the Miocene. Low as even these heights are in comparison with the giants of the Himalaya and the Andes, we cannot, gazing on the Highland hills of to-day, think without wonder and awe of an ancient grandeur which made them worthy rivals of even the Cottian, Pennine, and Bernese Alps, with their historic summits—Monte Viso, Mont Blanc, and the Jungfrau. On those awful heights, the snow never melted. Clouds floated around their dazzling ice-clad summits, and hid from time to time their white, sky-piercing peaks. Dizzy precipices, abyssmal ravines, cleft and scarred their sides. Go where one would, the solemn grandeur of these towering mountain masses must ever have dominated the view; while more awe-inspiring still the spectacle when from time to time one or other of them burst forth in volcanic fury, vomiting ashes and fire, and spreading far and near, over the luxuriant vegetation beneath, death and desolation.

Curious in its way it is to think how different would have been every feature of our life of to-day, had those Eocene conditions lasted till now. So completely are those physical circumstances distinct from those of the present, that to all but such as have made a special study of them, they must at first appear unnatural and incredible. Yet the fossil remains of plants, animals, birds, fishes, found in these islands, tell their own tale; and speak of tropical conditions of temperature, and distributions of land and sea very different from those of to-day.

Wonderful as it is to think of that teeming life multiplying itself in myriad forms, and spreading its beauty and its fitness forth beneath the Creator's eye; more wonderful still, and instructive too, it is to think of it all as a vast and steady progress and preparation which is to culminate in the appearance of Man, the 'minister and interpreter of nature,' to whose gradually strengthening gaze these long ages of the past now unfold themselves; and who, from their petrified remains, pictures many a life that had begun, culminated, and perished, ages before his epoch.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER XLIV.—'AY!' CRIED GARLING IN A QUAVERING VOICE, 'YOU HAVE PUNISHED ME ENOUGH, AMONGST YOU.'

HAVING once decided in her travelled mind that foreign cities were not only unlike London, but exceedingly unlike each other, Mary was steeled against the surprises of costume, architecture, and physiognomy. But that she shared the common frailty, and was not steeled against the amazement of meeting what used to be common in the midst of so much uncommonness, was fairly proved by the fact that suddenly encountering Hiram Search in a shady street in Cadiz, she sat upon a convenient doorstep and fainted. Hiram himself, though much amazed by the encounter, was less affected, and seizing a passing water-carrier, borrowed his little tin vessel, and knelt above his sweetheart and laved her temples

and her lips until she recovered. He had pictured to himself another meeting, and had all ready for delivery an impressive discourse calculated for her moral benefit; but now, when she came round, he was nursing her head upon his breast and murmuring, 'My poor darlin', my poor darlin', and taking not the slightest notice of half-a-dozen ugly but picturesque old women, and one picturesque and astonishingly pretty young one, who suddenly found this little drama acting beneath their noses, and stood attentively to watch it through. Mary was much more sensitive to public observation than her lover. The first thing she did was to arrange her bonnet and lower her veil, the next to resume her seat upon the convenient doorstep and cry comfortably. Hiram addressed the assembled ladies in their own language, and begged them to disperse; but being unable to prevail upon them, he lifted Mary to her feet, tucked her arm under his, and marched off with her.

'Mrs Strange is in Cadiz, I suppose?' asked Hiram.

'Yes,' answered Mary; 'and Mr Strange. They are going home to their house at Brierham.'

Hiram's reception of this simple piece of news astonished Mary; but it meant so much to him that she could not understand. He resolved at once to keep a hawk's eye on his master.

'You have been very angry with me, Hiram,' said Mary, attacking the subject next her heart; 'but you will forgive me, won't you?'

Somehow, Hiram's sternness had dissolved, and he forgave her, without the lecture he had intended to deliver; and she began to bubble over with innocent happiness and gaiety, and to talk of her curiosities of modern travel, all grown remarkable again, now that Hiram was here to listen whilst she spoke of them. He allowed her to run on, and threw in here and there a question to direct her talk, so that, without alarming her by any inkling of his own fears, he drew from her a contradiction of them. Gerard had touched neither at Naples nor Marseilles, and could, therefore, not be here of malice aforethought, since he had no knowledge of his enemy's journey. And just as this dread was finally lifted from Hiram's mind, Mary stopped, and clasping his arm with both hands, made as if to hide herself behind him, whilst with frightened eyes she stared across the street. Following the direction of her glance, he was aware of his master, standing stock-still with folded arms, unconscious of their presence, but tracking with eyes that burned like fire another figure in their rear, which, as they halted, approached them, leaning heavily on a walking-stick, and moving with a dejected head and downward glance. The face of this bent and ancient-looking figure was hidden from Hiram, though visible to Gerard. The latter crossing the sunny pavement, stepped into shadow within two yards of Hiram, so absorbed in his contemplation of the bent figure that he had no eyes for his servant. When the man tottered and quavered quite close, Gerard gripped him by the shoulder, and the pinched old face whose hollow careworn eyes looked up at him was the face of Garling. Hiram fell back a step with an exclamation which drew his master's regard upon him. Garling's glance travelled from one

to another, with an uneasy half-apprehension of their presence. His own daughter; the man who had ruined his plans; and the son of the man he had plotted to ruin. He murmured that they had not often looked so real, and made as if to pass on; but Gerard's grasp detained him.

'So you are here, Mr Garling, are you?' asked Gerard, swaying the quavering old figure gently to and fro in his strong hand. 'Your villainy hasn't led to happiness, either?' That truth was written in his face.

'That's new,' said Garling, turning his head aside, as if to listen. 'They say the same things over and over again. A trick—a mere trick, to trap me into weakness and confession.'

'Mister,' said Hiram, 'he's as mad as a March hare!'

The old man's eyes shifted to the last speaker, with a new look in them, half dreadful, half inquiring. Then they wandered to his daughter's face. 'Why don't you speak?' he asked.

She shrank away from him. 'Hiram,' she said falteringly, 'he frightens me. Take me away.'

'You can't hold malice against a thing like this,' said Hiram, addressing his master.

'Malice?' replied Gerard, dropping the hand that had held Garling. 'No.'

'Ay!' cried Garling in a quavering voice, 'you have punished me enough, amongst you! But you were gentle when the rest were hard. Perhaps you guessed I meant to use you kindly after all.' This was to Mary, who shrank back from him appalled. 'Ay, you're afraid of me; but I meant well by you. And I mean well by you still. It isn't much, compared with what it might have been, but it is all honestly come by, and that's a great matter—a great matter. Make a good use of it.'

The three who heard him looked from one to the other, and little Mary, whose nerves had already been greatly shaken, began to cry again.

'Why, now you weep,' he said, 'and I perceive you feel some touch of pity. Ah, that's Shakespeare! I was a great student of Shakespeare when I was a lad. A man of lofty imagination, and versed in all the mysteries of human nature. Cæsar haunted Brutus. But no man was ever so crowded round with ghosts as I have been.'

It was evident alike to Gerard and to Hiram that he was not sure of their corporeal unreality, but they could each trace the meaning beneath these scattered words of his.

'You don't take me for a ghost, do you, mister?' said Hiram.

Garling looked startled and perplexed, and made as if to go on again, but turning, caught sight of Mary, and laid his hand on her gently. 'Don't go,' he whispered; 'don't leave me. I shall make it worth your while.'

'Heaven's my witness, mister,' said Hiram earnestly to Gerard, 'that I don't want my little gell to finger a penny of his money, if he's got any; but it ain't the thing to leave him in this condition in a foreign city. He's been a rare bad old lot, and that's a fact; but he ought to be looked after.'

Gerard returning no answer, Hiram laid his hand on Garling's shoulder and addressed him in Spanish. 'Do you speak the language, old man? Can you get on by yourself?'

'Yes, yes,' returned Garling, putting him fretfully aside, and striving once more to get past Hiram to his daughter, who, with terror in every gesture and feature, avoided him.

'Take her away,' said Gerard. 'I will see that he does not follow you. I can get somebody to take charge of him, I daresay.—You needn't be afraid of me, Search,' he said, somewhat bitterly. 'Heaven has taken vengeance here.'

'That's like yourself,' returned Hiram. 'That's the first thing like you sence we sailed out of Thames river!'

'Take her away,' said Gerard again, speaking sternly this time. Hiram obeyed.

The old man struggled to pursue the retreating pair; but Gerard, passing an arm through Garling's, turned round, and led him in the way he had been originally going. He resented this for a moment only, and then, with drooping eyes, submitted.

'Where do you live?' asked Gerard.

Garling raised his stick a little from the ground and pointed forward. He went on slowly but without hesitation; and before they had gone far, he paused, and drawing a key from his pocket, entered at an open doorway, mounted a set of white stone steps, and admitted himself to a large chamber, furnished in the fashion of the country, which always looks sparse to an English eye, but with no sign of poverty or neglect in its appearance.

'Is this your home?' Gerard demanded softly.

Garling laid down his hat and stick and passed a hand across his forehead before answering. When he responded, it was with a tone and manner so different from those he had hitherto employed, that the questioner was startled. 'This is my home, Mr Lumby, and will be for the remainder of my time.' He motioned his visitor to a seat, and himself sank down wearily. 'I cannot resent your intrusion,' he said feebly; 'and since you have found me here, you may tell my late employers that I am a good deal worn, and that I shall not last much longer. I have had many troubles lately, Mr Gerard, and my mind is affected; I feel it unhinged at times. I was proud of my intellect many years ago, and I misused it. I am broken down, as you may know by these confessions; shattered, quite shattered, and an old man.' The light alternately flickered and faded on his face, and his voice seemed to fall and rise with the brightening and the dying of an inward gleam. At one second his face and voice looked and sounded altogether sane, and in the next both had grown senile. The words 'I am broken down' were maundering: 'as you may know by these confessions' followed swiftly, with a re-assertion of his ancient self: 'shattered, quite shattered; an old man,' might have been spoken by one hopelessly gone in melancholia.

'The evil you attempted to do us, failed, or partly failed,' said Gerard. He might have gone on to say more; but Garling broke in with a murmur: 'Failed? Yes, yes. It failed.' Then they both sat silent for a time, until Garling looked up with a bewildered air. 'Help me,' he said; 'I want to think of something. Whom did I meet? Have I met anybody to-day?'

'Your daughter?' asked Gerard.

'Yes,' he said, brightening instantly, but sinking

back again. By-and-by he said, in the old dry reticent way which the listener could remember from his boyhood: 'It is a curious thing for me to ask a favour of any man belonging to your house. Will you do me one?'

'If I can,' said Gerard. 'Yes.'

'There is some remnant of my own money left me, and I wish my daughter to inherit it. I have not command of myself at all times, and my mind is shattered. It is going. What did I want to say?'

'Listen to me,' said Gerard, as he drooped again. 'You wish to make a will in your daughter's favour?'

'Yes, yes.'

'Entirely and without reserve?'—He nodded. 'Yes' again, with brightening eyes.—'And you wish me to have it prepared and bring it to you to sign?'

'Yes,' he said, once more collected; 'and to make immediate provision for the transfer of my last penny to an English bank.' He arose and produced papers, and gave instructions drily and clearly, without even a verbal stumble. 'If you bring a lawyer with you,' he said then, 'see me before you bring him, and let him meet me at my best.'

Gerard promised this also; and Garling again began to maunder in his speech; and after a time the young fellow left him, bound by his undertaking, but not sure that the broken swindler would ever again be in a mental condition to make any business transaction valid. He did perhaps the wisest thing he could do, and consulted the British consul, to whom he told the whole story. The consul himself drafted Garling's last testament, and he and Gerard witnessed the document when it was signed. When called upon for his signature, Garling was in the full possession of his powers. The man's tremendous will was equal to the strain he made upon it; but it never answered to another call; and in a week his stubborn wasted heart beat its last, and the ghosts his wicked life had gathered round him haunted him no more.

CURIOUS CASES OF GUNSHOT WOUNDS.

BY A RETIRED ARMY SURGEON.

HAVING read the article on 'Curious Facts relating to Gunshot Wounds,' in No. 931 of your *Journal*, I send you a few facts relating to wounds of the above nature, which came under my own observation while I was surgeon of a regiment.

At the relief of the Residency of Lucknow, during the Indian Mutiny in 1857, the following cases were brought to me. A private of my own regiment who had remarkably prominent eyes and a very flat nose, had both eyes cut open by a bullet which passed across them without injuring the nose. Another private was struck by a bullet on the outer edge of the right orbit. It broke the bone, and grooved the temple deeply. I dressed the wound, and applied a bandage to keep the dressing in its place, and desired the man to sit down while I attended to other cases. There is an old saying which was in use amongst sailors, namely, 'If you wish

to be safe, put your head into a hole that has been made by a cannon-ball, as the chances are that a second shot will not strike the same spot.' The case of this man, however, was a curious contradiction to this saying. About an hour after I had dressed his wound, I missed him; and as I was making inquiries about him, he presented himself, wounded a second time, and strange to say, in the very same spot, the bullet having ripped up the bandage and the dressing, and considerably enlarged the first wound. It appeared that after the first wound had been dressed, feeling that he had the use of his arms and legs, he slipped quietly away while my back was turned, rejoined his company in the fight, and was wounded almost immediately in the very same spot.

A third private was struck by a bullet on the outer edge of the left orbit. The bone was broken, and there was only a small wound, about a quarter of an inch long, on the skin, extending downwards—so small, that I did not think it possible that a bullet could have entered it. The wound healed; and for eight years afterwards the man did his duty. About the end of the eighth year, however, an abscess formed at the spot where he had been wounded; and on opening it, I observed a small dark body appearing just above the edge of the orbit. At first I thought it was a piece of dead bone; but on removing it, found it to be the half of a bullet. It had been lying within the orbital space under the eyeball for eight years. When he was wounded, the bullet must have been split on the edge of the bone, one half flying off, and the other half lodging within the orbit. He lost the sight of the eye from the moment that he was wounded, though there was no apparent injury to the organ; but strange to say, the half-bullet lying under the eyeball never gave him the least inconvenience; and he was as much astonished as I was when I removed and handed it to him.

A fourth private, a huge man, standing six feet four inches, and with an immense chest and frame, was struck by a bullet on the breast-plate, and knocked down, but without being injured, except that 'the wind was knocked out of him,' as he said himself. How such a huge body could have been knocked down by a musket-bullet, was astonishing.

A fifth private was struck on the rim of his feather bonnet. This broke the force of the bullet; but it passed through the frontal bone and lodged in his brain. He was quite sensible, had no pain, and only complained of giddiness. He was sent home as an invalid; and two years afterwards I heard that he was still alive.

Another private advancing at a run, had his mouth open; a bullet entered his mouth, passed between the skin and the muscle which is attached to the angle of the jawbone, and was removed from beneath the skin at the back of the neck. At first, he was not aware of having been

wounded, and was astonished to find himself spitting blood and his jaw gradually becoming stiff.

Another private was slightly wounded three days in succession, and began to think that he had had his full share, and would escape for the future. One day, however, as he was sitting in his tent in camp, into which the enemy occasionally sent shot and shell, a six-pounder round-shot came ricochetting along the ground, burst into the tent where the man was sitting, and struck him on the back, rolling him heels-over-head. He lay gasping for a minute or two, thinking he was done for; but he gradually recovered his breath, found that he could move his legs, then his arms, then that he could sit up; and at last he stood up, and with the assistance of a comrade on each side, walked to the hospital, which was close by, sheltered behind some ruins. He was black and blue for some time, and that was all. He was never wounded again.

An officer of my acquaintance is now living—I saw him only a few months ago, looking remarkably well—who has a bullet lodged in the base of his right lung, and it has been there since 1857, as he was wounded during the Mutiny. He suffers very little inconvenience, except that occasionally he has a fit of coughing, followed by expectoration of blood.

On the field of Inkermann, sixteen months after the battle, I picked up the mummified head of a Russian. The eyelids, nose, lips, and skin of the cheeks, were still discernible, and the skull was covered by the scalp, to which some light yellow hair adhered. There was a hole right through the skull; and I found half a bullet lying between the scalp and the bone, on the top of the head. The bullet must have struck the bone, and been split, one half passing right through the head, and the other lodging under the scalp. I brought the skull home, and gave it to a brother medical officer, who promised to send it to the Museum of the College of Surgeons, Edinburgh.

A native servant of a brother-officer was struck by a bullet on the forehead just above the left frontal sinus. The bullet was wedged into the bone; the skin healed over it, and the man resumed his duty, and lived, feeling no inconvenience, for nearly a year. Suddenly one day he fell down, and after being convulsed for a couple of minutes, died. I had never heard of this case until after the man's death; but the moment it was reported to me, I went to see and examine the wound. I found a round bullet wedged tightly into the bone, two-thirds of it extending beyond the inner plate of the skull, and pressing on the brain, which immediately round the spot of pressure was softened.

On first entering the army—upwards of thirty-seven years ago—I was ordered to join a regiment at the Cape of Good Hope; and within eighteen months after my arrival, a Kaffir war broke out, and was protracted during two years—the war of 1846-7. During the second year of the war, I was with a detachment of my regiment, which was encamped on the north bank of the Great Fish River, close to the sea, for the purpose of protecting government stores which were landed there, that being the nearest point to the scene of hostilities. Upon a certain day, a sergeant

and one of the privates left the camp without leave, taking a horse with them to bring home some green forage. They went without firearms or any other kind of weapon, which was simply folly; but they had been so often on similar expeditions before and seen no enemy, that they concluded there were none in the neighbourhood. On arrival at some oat-fields, they tied the horse to a stump of a tree, cut a supply of forage, and were in the act of making it up into two bundles, to sling over the horse, when three Kaffirs, one armed with a gun, and the others with assegais, who had been lying concealed in the tall oats, sprung upon them. The one with the gun was facing the sergeant, who thought that his only chance was to close at once with his enemy, and accordingly he rushed forward with that object; but just as he was about to grasp the barrel of the gun, the Kaffir fired, the muzzle of the weapon almost touching the sergeant's stomach as he did so. Though he felt that he was wounded, the sergeant grappled with the Kaffir, and after a struggle, wrenched the gun out of his hands, and clubbing it, struck him a blow on the head which killed him. The private in the meantime had fallen pierced by assegais. While the sergeant and the Kaffir were struggling, one of the other two Kaffirs ran to where the horse was tied up, and cut the halter through with his assegai. But the horse thus freed escaped from the Kaffir, and fortunately approached his master, who got upon his back and galloped off towards the camp.

I was standing at the door of my hut, and saw the sergeant gallop in and dismount; and to my surprise, he walked quietly up to me, saluted, and said: 'I am wounded, sir;' and then he turned and walked with me to the hospital, and on entering the hut, fainted. We laid him on a cot and removed his clothes, when I found that he was shot right through the abdomen. The bullet had entered a little to the left of the umbilicus, passed straight through, and made its exit just below the rim of the ala—or large curved bone—of the pelvis, making a clean round hole. The skin round the wound in front was much scorched, showing that the muzzle of the gun must have been very close to the part when fired.

He rallied slowly from his faint; but of course I thought the wound was a mortal one, and that my patient had not many hours to live, so sat beside him during the afternoon and all that night, and attended to him next day, giving him a little nourishment frequently. To my astonishment, he relished his nourishment and fell asleep, and woke up and took more soup and fell asleep again. Meanwhile, no bad symptoms appeared, and as there was no interruption of the visceral functions, I began to be hopeful.

Matters went on in this way for several days, during which the only discomfort—I could not call it suffering—that he felt was that the scorched dead flesh around the wound in front began to separate; and when this came away, there was exposed a large opening nearly two inches square, through which I saw plainly then, and for days thereafter, the bowels lying in their natural position, and apparently uninjured; and yet I could hardly believe this possible. However, the case went on favourably; the large hole

gradually contracted and healed up, and so did the wound behind; and within two months from the day that he was wounded, he was able to move about, and within another month, to make his appearance on parade again.

It was an extraordinary case. The bullet must have passed straight through; for there was nothing to deflect it, and the two wounds were exactly opposite each other. How the bowels escaped injury, was truly wonderful; and I can only explain it by supposing that the bullet—a small round smooth one—passed immediately under the large, and above the small intestine, in fact between the two, and as close as possible to each, almost touching both. This happened thirty-six years ago; and within the last seven years, I heard from an old brother-officer that the man was alive and healthy, though well stricken in years. Wounds in the abdomen are almost always fatal, and this is the only case of recovery within my experience.

One or two cases of very narrow escapes from death by a bullet occur to me. During the Kaffir war which I have already alluded to, I several times accompanied large parties of troops sent out to intercept or pursue bodies of the enemy; or to destroy kraals or capture cattle. We never succeeded in intercepting or overtaking Kaffirs unless they were in strong parties and desired to fight; and as we marched along by day, the Kaffirs, in loose order and in parties of two or three, would hang upon our flanks and rear, showing themselves upon the high ground, but keeping out of range of our muskets.

One night, four of us were sitting cross-legged round a little fire on which we had put our coffee-kettle to boil; and as we thus sat, a report, followed by the ping of a bullet close over our heads, warned us that Kaffirs were prowling about. This was followed by several other shots, which struck the ground quite close to us; but we were tired and cold and hungry, having had no food all day, and we were unwilling to lie down to sleep on the bare ground with empty stomachs. We therefore determined, in spite of danger, to keep the fire burning until the coffee was ready; and to hurry this, one of us stooped down to blow the fire with his mouth, when another shot settled the matter, for a bullet passing between two of us, smashed the kettle, and scattered the embers about the head of the one who was blowing the fire. How close the bullet passed to his head may be imagined, for it touched his hair. There was nothing to be done but to stamp all the embers out, roll ourselves in our cloaks, and light our pipes to keep down the cravings of hunger.

At the relief of the Residency of Lucknow, the colonel of my regiment had two very narrow escapes. As he was cantering from one position to another, the motion of the horse raised him a little out of the saddle every now and then, and just at the moment when he was raised out of the saddle, a bullet passed below him, tearing the leather open along the whole seat of the saddle. Had he been sitting still in the saddle, he would have been horribly wounded. Shortly after, another bullet struck the handle of his revolver, which was in a pouch attached to his sword-belt, and but for the revolver, he would have received a mortal wound.

At the battle of Cawnpore, on the 6th December 1857, one of the men of my regiment had his arm at the elbow shattered by a round-shot, and I determined to perform amputation above the elbow, on the field, so got the man well under a bank, and out of danger as I thought. Unfortunately, the camels with ammunition crowded round us; and just as I was about to commence the operation, a shell from one of the enemy's guns came amongst us, and striking one of the ammunition boxes on the nearest camel, not three yards from us, exploded and blew up the ammunition also. Bullets flew in every direction; but though several assistants and myself were there, not one of us was touched, even the camel escaping uninjured.

On the same day as the regiment to which I belonged was advancing in line, a shrapnel shell burst right over us and wounded a few of the men. One of the bullets struck an officer in high command (since dead), who with his staff was riding close behind the line. I saw that the bullet had torn his coat open from the shoulder half way down his back, and ran up to his assistance. I got him to dismount, and took him into a dry ditch, and as he was in the act of sitting down, a round-shot struck the top of the bank. Had he been standing erect, the shot would have carried off his head.

On the same day, the brother of this officer, to whose staff he was attached, received a very singular wound. A grape-shot struck the scabbard of his sword, touched his stirrup, and entered the outside of the left foot below a prominent bone (the cuboid), passed under the sole, and lodged on the inner side or arch of the foot, from which position I removed it. This was a very remarkable wound, in that no bone was broken or injured. This officer is alive at the present time, and has the use of his foot, though I have heard that he walks a little lame. I have not seen him since the day on which he was wounded.

At the siege of Lucknow, the chaplain attached to a Highland regiment was in his tent, and while in the act of opening a box, a round-shot fired at a high elevation came straight down through the tent, passed close to his head, struck the box he was in the act of opening, and rebounded, again almost striking his head in its rebound. This gentleman is at the present time minister of a Scotch parish, and may possibly read this, and remember the start he got, and how we laughed over it.

It is sometimes quite possible to see a cannon-ball in its flight, and easy to follow its course after it has once touched the ground; and I have more than once seen the ranks open, when the regiment was in line, to let a ball pass.

In the midst of danger, soldiers are sometimes prone to jest and laugh, and even play practical jokes on each other, as the following anecdotes will show. During the trench-work before Sebastopol, there was a certain man in the regiment who disliked being on duty in the trenches, and who always got into what he considered the safest corner of the trench, and remained there as long as he could. The bugler of his company, a malicious urchin, soon found this out, and was constantly in the habit of playing tricks to frighten his cautious comrade.

He would peep over the parapet and call out 'A shot!' and then turn round to see his friend roll himself together like a ball. At other times he would call out 'A shell!' of which he knew the man had a mortal dread; and when he saw him throw himself flat on the ground, he would take a piece of earth or a stone and throw it close to his recumbent friend's head, and then run up and comfort him by showing him a bit of an old shell which he had picked up for the purpose, remarking at the same time: 'That was a near thing, man.' All the men knew and enjoyed the joke, and sometimes roared with laughter; but it was well for the urchin that his friend never found him out.

This same man was really wounded afterwards, and while I was removing the bullet from beneath the skin of his back, the same 'urchin' was standing by, and the moment I had extracted the bullet—a small spherical one—the boy held out to his friend a six-pound cannon-ball, saying: 'See what the doctor has cut out o' ye!' This occurred while my back was turned; but on hearing the remark, I looked round, and saw the boy holding out the shot, and the bystanders convulsed with laughter, and quite regardless of the heavy fire going on around us.

THE ENFIELD COURT ROBBERY.

IN TWO CHAPTERS.—CHAPTER II.

UPON further investigation, it was found that while the robbery at Enfield Court had been most carefully planned and premeditated, the fire had evidently been an accidental part of the thieves' programme, as a hastily done-up bundle, containing some valuable articles, was discovered just outside the supper-room window, as if dropped in a hasty exit. Happily, the fire had been subdued in time to save the greater portion of the house; but the damage done, to say nothing of the immense loss caused by the robbery, was very considerable.

In due time, two detectives came down from London, and the excitement continued unabated in the neighbourhood whilst they remained; but nothing transpired. They maintained an amount of stolid reticence which to the curious was most provoking; and finally they departed without having apparently done anything towards solving the mystery, far less securing the thieves.

Gradually things seemed to settle down, and the robbery at Enfield was replaced in my mind by my entire absorption in Amy's engagement, to which I had given a qualified consent, on the condition that Mr Mauleverer's family were satisfied with the connection, and that pecuniary matters were properly adjusted. Now that he had actually declared himself, I felt emboldened to ask questions and ascertain everything I possibly could as to the antecedents of the man who was to be my darling's husband.

He was well connected. His mother was dead; but his father was alive, and lived in great seclusion at his own property, which was situated in Yorkshire. He was reputed to be rich; but on this point I could gain no definite information. Still, remembering Lady Dasent's 'very well off,'

I was not much troubled on the score of money matters. I had felt it incumbent upon me to invite him to spend a few days with us before he left for Yorkshire, and it seemed natural that he should come to us. I told him frankly that Amy had very little money of her own—something less than two thousand pounds; but at my death, I intended to leave her everything, which I felt sure he would approve of being tied up and strictly settled upon herself.

I thought his expression changed a little when I mentioned this, and still more so when I casually asked him in a friendly way if he always meant to be an idle man; for he had left the army, it appeared; and I was anxious, for Amy's sake, to see some symptom of his wishing to get an appointment or occupation of some kind.

Meanwhile, Amy seemed satisfied; but my doubts—born of my extreme affection for her—began to arise, and refused to be silenced.

Mr Mauleverer had written to his father announcing his engagement; but as yet neither line nor message from the old gentleman had reached us. It was not treating Amy properly; and though Amy's entreaties to me to be patient, and oft-repeated assurances that Alfred said everything would be all right, silenced me for a time, I was fully resolved to see matters either ended or placed on a satisfactory footing before much longer time elapsed.

In the meantime, Mr Mauleverer received one morning a telegram, which he informed us contained the news of the illness of an old friend of his in London. He must start immediately, if he wished to see him alive. If I did not mind, he would leave his heavy luggage behind him, and only take a small portmanteau. Unless something very special happened to detain him, he would be with us again in a couple of days. His adieux were hurried, but impressive. He seemed really sorry to leave Amy, who was, however, enabled to bid him a cheerful good-bye on the strength of his speedy return.

On the morning of the second day after he had taken his departure, Amy was evidently expecting a letter from him—not unreasonably, I thought, as it was natural she should wish to hear that he had reached his destination safely. She was rather restless and fidgety. Perhaps that was the cause of my own almost nervous feelings as post-time approached. I could settle down to nothing.

'Amy, darling,' I said presently, 'suppose you take the garden scissors and snip these geraniums for me; they want it badly.'

So Amy stepped out on to the little lawn with its still brightly filled parterres; and I watched her from the drawing-room window with feelings of mingled love, anxiety, and apprehension, for do what I might, I could not get over the sense of some impending calamity—something sorrowful for her. Soon afterwards, she joined me, radiant with her letter, the first she had ever received from him; a very ardent, gentlemanly epistle, I was obliged to own; satisfactory too, as it contained the information that he had heard from his father, who, on certain conditions, which he saw his way to comply with, had promised to consent to the marriage. A letter for me from old Mr Mauleverer had been inclosed in his letter to his son; but the latter preferred delivering it

to me personally; consequently, I would not receive it until his return to us.

Amy had an engagement that afternoon to visit the Dasents, who were now installed in a small house they had at some distance from the Court, whilst the latter was being repaired. She was to drive over, taking our small groom with her; and I was not to expect her back until after nine o'clock at the earliest; so I was to spend a solitary evening. After she left me, I wrote a few letters; then I tried to read; but my attention wandered. A slight drowsiness came over me, and I suppose I fell asleep. All at once I woke up with a consciousness of some one standing just outside the closed window, gazing into the room, and I discerned distinctly the features of a man's face pressed closely against the window-pane. I was not generally nervous, but I confess a thrill of fear shot through me then, and for a moment I was almost too terrified to stir. The next instant I got up, and simultaneously with my doing so, the face vanished. But the eyes I had so clearly seen might be watching me still. I controlled all outward symptoms of alarm or consciousness of what I had seen; and after a few minutes—to me each seemed an hour—I moved towards the door, and summoned one of my servants. I mentioned the circumstance to her, and enjoined extra care that night as to our bolts and bars. Though we had neither gold plate nor diamonds to attract thieves, still there was enough silver to satisfy moderate cupidity, and it was wonderful how such facts got abroad. After the Enfield Court robbery, one could not be too careful.

Very soon Margaret my servant had secured all the shutters, drawn the curtains, and I sat down to my solitary tea, wishing most fervently that Amy were safely within doors again.

A sudden storm had come on; the wind had risen to a hurricane, and bade fair to continue during the night. About eight o'clock, a message arrived for me from Lady Dasant, telling me that as the storm was so severe, they had ventured to detain Amy for the night; in the morning, she would be with me early.

I was both glad and sorry—glad that Amy would not run the risk of encountering any lurking individuals in the darkness; that she was safely at Enfield; but sorry for my own sake, I felt so solitary and, truth to tell, so strangely nervous.

The evening wore on slowly, and as ten o'clock struck I went to my room. It was directly over the drawing-room. Next to mine was Amy's; and on the other side of the landing was the spare room, which had so recently been occupied by Alfred Mauleverer. Above, slept the servants. I heard them go up to bed, and while I could hear them moving about overhead, I was tolerably comfortable; but soon, stillness reigned over the Wren's Nest. My domestics were asleep. The best thing I could do was to follow their example, which after a time I suppose I did, for I was awakened by a noise, a distant sound from the hall below. I scarcely breathed. I could hear my heart beating as I lay listening with strained ears, and recalling with horrified terror the face I had seen at the window.

I need hardly say that I was thoroughly awake. Every nerve was strung to such a pitch of tension,

that if a pin had been dropped, I feel sure I should have heard it. It came again—the sound from below—dull, this time, but distinct; and presently I heard stealthy footsteps coming rapidly and quietly up-stairs—evidently shoeless feet, but none the less audible to my ears. Never since I had lived at the Wren's Nest had I locked my bedroom door; I had a dread of doing it; and despite my nervousness on this occasion, I had not departed from my rule. It was too late to attempt to accomplish it now. Besides, looking back, I think a sort of temporary paralysis had come over me. I heard a hand laid upon the handle; it was turned cautiously, and the next moment, from my curtained bed I distinguished a man bearing some sort of small lamp—his face concealed by a mask—enter.

It was a matter of life or death to me to remain quiet. Through my mind flashed a resolve to deliver up everything I was possessed of—family plate, my mother's amethysts, all my small valuables, to this ruffian, in exchange for my life, should he demand them. But no such intention appeared to be his. He approached the bed, raised his lamp, flashed it for a second on my closed eyes; and then withdrew it, apparently satisfied that I slept. It must have been a cursory glance, for I could not have sustained the deception for more than a moment. He gave a keen look round the room. Only the lower part of his face was covered, so I could see his eyes, small, black, and piercing, with something familiar to me in them, even then. My watch—a legacy from my mother—lay on the toilet-table, but he overlooked it. Evidently, mine was not the room he meant to rifle. Almost noiselessly he vanished out of it, and I heard him proceed into Amy's room next—thank God, it was empty—then into the spare room, where he remained.

All at once it flashed across me that by a little courage I might save everything and secure the thief. In former days, my spare room had been a nursery, and the windows were barred, so as to make all exit from them impossible. If I could slip out of bed, get across the passage, in one second I could lock the door, and, secure from any attack, raise an alarm.

The agony of fear I was in was such that I felt equal to any effort. Without losing a moment, I glided out of bed; a moment's pause acquainted me with the fact that the miscreant was busy; I heard him throwing out things all over the floor. He was searching Mr Mauleverer's portmanteaus; they were quite at the far end of the bedroom; so I calculated that I could safely close and lock the door before he could possibly prevent me. Like a ghost, I moved out of my room on my perilous errand. Through a chink of the half-open door I beheld the man kneeling in front of the larger of the portmanteaus, rifling it with a rapidity and intentness which secured my being for the present discovered. I had intended to seize the door the instant I reached it, but something made me pause in the darkness and peer with terrified eyes into the bedroom. He had his back to me, and I could see the quick movements of his arms as one thing after another was hurriedly thrown upon the ground.

Imagine my feelings as I stood within a few paces of him, to see him with the utmost celerity

tear open the lining of the portmanteau and draw from it a glittering mass of diamonds, which I instantly recognised as Lady Dasent's famous circlet, the one she had worn on the night of the eventful ball, and which, with the other things, had so mysteriously disappeared!

Horror, anguish, and fear well nigh caused me to fall to the ground. I made an involuntary movement; I thought I was fainting; and the noise reached him. Looking up, our eyes met. With the strength born of desperation, I seized the handle of the door, and in a moment the key was safely turned in the lock.

Happily for the lives of myself and my servants, the door was an old-fashioned one, of a particularly strong description; and having a strong outer moulding, it was almost a physical impossibility to break it open from the inside of the room. The exigency of the situation sustained me for the moment, and enabled me to rouse my three servants, who must at first have thought I had gone temporarily out of my mind, when I tried to make them comprehend our position.

It was two o'clock in the morning, still blowing a gale, and dark as Erebus. But assistance must be got. The man within our spare room might have accomplices without; our danger might but be beginning. We had an alarm-bell; that must be rung. Four trembling women, we proceeded in a group to the outer back court, where the bell hung, only to find the rope severed. I had snatched up a cloak, and arrayed myself in my slippers and a skirt. The servants were as little dressed as myself. But it was no time to hesitate; immediate action must be taken. We must rouse the gardener, who lived a considerable way from the house. Through the dark dripping shrubberies, we flew, at every step expecting to be dragged back by some lurker; but no one stopped us. In safety, we reached the cottage; and in a few minutes Arkwright, my gardener and general factotum, was in our midst.

His cottage was within a short distance of several others; and though he wished to go straight to the house, fearing lest the man should have escaped, or been liberated by accomplices, I would not hear of it. I insisted upon his getting a couple of men to accompany him, a precaution for which I saw Arkwright's nice little wife was grateful. This caused some delay; but it had not enabled my captive to escape. The hall door was found open, and everything just as we had left it, the spare room door still closed. By my orders, it was not to be unlocked until the police arrived. Several volunteers had hastened to summon them; and while we were awaiting their arrival, I had time to think a little of the horror of the position. How had Lady Dasent's diamond necklace found its way into Alfred Mauleverer's portmanteau? Could he be some awful impostor, some villain in the guise of a gentleman, whom I had harboured in my house, and to whom I had meditated giving my niece? The shock would almost kill Amy. Even I felt as if I should never get over it.

Who was the man? A dreadful tightness came over my heart when this question presented itself, a suspicion too horrible.

It made the suspense almost too terrible. I heard the policemen arrive, and while they were ascending the stairs to the spare bedroom, I felt almost choked with an apprehension for what I should next hear. The door was unlocked, and there was the thief. He made no resistance; the game was up. Thanks to 'the old woman,' as I heard him style me, he had missed the best chance of clearing a fortune he had ever had. Who was he? Where had I seen him?

The mystery was soon explained. He was the Dasents' magnificent head-butler—one of a gang, as it afterwards was discovered—and who had, with the connivance of his comrades, cleared off the plate, but hoped to secure for his own private benefit the famous diamonds. The fire had so far upset their plans, that he had found himself left in possession of the diamonds, when his services came to be required in aiding to extinguish the fire. In place of flight, therefore, as he had at first intended, the wary butler judged it best to let his confederates make off with the plate, while he remained with the diamonds in his possession, one of the most active in subduing the flames, and suggesting the most feasible schemes for discovering the thieves.

When the detectives came down to Enfield, it became imperative upon him to hit upon some safe place for the diamonds. Mr Mauleverer was blessed with an over-abundant wardrobe; and during his visit to Enfield, this butler had chosen to consider him under his particular care, laying out his clothes, arranging and settling things generally for him. The idea of temporarily depositing the precious gems within the lining of one of that gentleman's portmanteaus, struck him as a brilliant one. His intention of course was to withdraw them directly Mr Mauleverer's departure was about to take place, and he would of course have the best opportunity of doing so while packing his clothes; but his plan by a mere chance miscarried, and he had the mortification of seeing the portmanteau leave Enfield with the diamonds still safely secreted within it.

Mr Mauleverer's temporary absence from our house afforded too good an opportunity to be missed; hence the visit to the Wren's Nest, which very nearly terminated my existence, for the shock and exposure combined brought on an illness from which, for long, it was not expected I should recover.

Amy was my tender nurse all through it, and it was from her lips I heard all the particulars of the robbery, in the sequel to which I had been called on to play so prominent a part.

Happily for both our sakes, she never knew of the terrible suspicions I had for a brief time entertained regarding Mr Mauleverer. That gentleman made his appearance in due time at the Wren's Nest, bearing his father's letter, which informed me not only of his willingness to welcome Amy as his daughter, but to settle an income upon the young couple of the most satisfactory description.

Shortly afterwards, the butler was placed upon his trial, and I was called on, despite my weakened condition, to give evidence against him. This, however, I was happily spared, as the prisoner, acting on the advice of his counsel, pled guilty.

Indeed, I was doubly relieved, as Mauleverer's character was thus vindicated. As the wretched prisoner was being removed, he vowed he would 'pay Miss Courtenay a visit again when his term of imprisonment expired.' However, ten years' penal servitude may bring about a change in his intentions.

Lady Dasent amused me very much by the comforting view she took of the matter. 'Do not trouble your head, my dear Miss Courtenay, about anything the wretch may have said; in the course of nature, you will be beyond his reach long before then.'

'Quite true,' I replied with a smile. 'At all events, I am glad I have lived long enough to be the means of your recovering your diamonds.'

THE PARCELS' POST.

By an Act of Parliament passed in August, the Postmaster-general is authorised to add to the already varied work of the Post-office that of the carriage of parcels within the United Kingdom, according to the following moderate tariff, namely, not exceeding one pound, threepence; three pounds, sixpence; five pounds, ninepence; seven pounds, one shilling. The Act does not, however, prescribe the limits of size of the parcels to be so conveyed, nor the time at which the new scheme shall take effect, these points being left to the determination of the Postmaster-general; but as regards the latter, it is not likely that the scheme can come into operation until some time next spring. Meanwhile, all needful preparations are being made, and the new department of business will no doubt be brought into existence at the earliest possible moment.

To the ordinary individual who takes things as they come, and who does not concern himself with aims and means, the idea of a parcels' post presents itself as a simple arrangement for carrying packages, the only visible signs of which would be an office to take them in and a conveyance to deliver them. But to any one who has seriously reflected upon the vast and intricate machinery by which the operations of the Post-office are carried on, the labour of devising and setting up this new branch of business, and carrying its work into every nook and corner of the United Kingdom, must present itself as one of exceeding magnitude, necessarily demanding a large amount of anxious thought and foresight. When it is remembered that within our little kingdom there are some fourteen thousand post-offices, at each of which provision must be made for the new branch of work, and that at every one of these offices some persons must receive instruction in the new duties about to be imposed upon them; that the mode of delivery in every town and place in the country has to be planned and arranged (not the least troublesome of which will be the delivery along the routes of the rural posts); that a precise and fixed course must be laid down for the transit of the parcels' mails between each place and every other place in the country; that the heavier nature of the parcels' mails will probably revolutionise the mail-cart services along the high-roads—all of which things must be provided for at the outset; it will be understood that the Post-office department has

undertaken a task which will try its energies to the utmost.

That the scheme of the Parcels' Post will be placed on a satisfactory footing, so far as giving a thoroughly good service is concerned, there is little reason to fear. The acquisition and consolidation of the telegraphs have shown what a department of practical officials can do in putting together a large working concern; hence the experience gained by the executive of the Post-office in connection with telegraphs since 1870, will be eminently useful in the work which they have now in hand.

But apart altogether from the purely official aspect of the scheme, there are things to be considered as affecting trade, and the prosperity or otherwise of individuals, arising out of the coming boon to the country at large. Just as the opening up of the country by railway lines has had the effect of driving stage-coaches off the great highways, laying open new avenues to commerce, diverting business into new courses, and taking it away in many cases from the old, thereby bringing adversity to many towns which flourished under the old régime; so the Parcels' Post, by affording a cheap and ready means of obtaining light articles from a distance, will in all probability create disturbance in many branches of trade. It requires no stretch of the fancy to imagine that there will arise a rivalry between tradesmen in a large retail way in the great cities, and their less pretentious brethren in country towns; the former striving by means of advertisements and the Parcels' Post to supply country districts with their wares, the latter struggling to retain the share of business which they already possess. Haberdashers, stationers, tea-merchants, seedsmen, fashionable bootmakers, and smallwares' people of all sorts in the larger towns, besides the great Stores in the Metropolis, will not be slow to discover an extended field for trade brought within range by the new post, and to take advantage of it; while country-people, finding the cost of conveyance for light articles to be but small, may frequently make their purchases in the larger markets, and no longer depend entirely upon local tradespeople.

Yet the country shopkeepers will not be without some compensating advantage; for the ease with which they will be able to procure supplies in small quantities, will enable them to maintain a more varied stock, and so be in a position to supply the neighbourhood with articles for the purchase of which it is now necessary to visit the larger towns. The farmer's wife will no longer need to delay purchases which are not of every-day occurrence, till she makes her periodical visits to the 'big town;' the village shopkeeper will either have the required articles in his more varied stock, or will be able to get them for her promptly and at a trifling cost for carriage. The precise way, however, in which trade will balance itself as between the large and small towns, will not be felt until the Parcels' Post shall have been some time in operation. There seems no reason why townspeople should not obtain fowls, butter, &c., if properly packed, direct from the farm; or why the people of Scotland should not enjoy the luxury of clotted cream direct from Devonshire; or the citizens of London receive

their grouse direct from country dealers in Scotland. But there are very many ways in which trade in light articles will be facilitated by the Parcels' Post; and one decided effect of the scheme will be the equalisation of prices for many articles of the same kind, which now have different values in different parts of the country.

The new post will also greatly encourage intercourse in social circles, by enabling friends to exchange presents more freely from all parts of the kingdom, the cost of sending parcels across country by existing means, acting as a bar to freedom of intercourse in this direction. How the amount of work will be met during Christmas seasons, is a matter for serious thought on the part of the Post-office; for the number of articles that will certainly be sent, as well as their aggregate weight and bulk, will far exceed anything which the railway Companies have hitherto had to contend with at that season.

Another period which will bring special strain upon the department will be the earlier days of the grouse season. Hitherto, sportsmen residing at shooting-lodges along the straths and glens in the Highlands, have been under the necessity of sending their boxes of game for despatch to the nearest railway station, perhaps many miles away; but in future they will no doubt seek, and expect to be relieved of these consignments by the rural postmen, or at the small post-offices in their neighbourhood. The boxes of game which are sent from the Highlands southwards during the shooting-season are numbered by thousands, and the disposal of these, superadded to the ordinary business, will tax the energies of the local post-office people to a large extent.

The simplicity of the tariff, and its uniformity in relation to distance, as well as its moderateness, must bring the service within the understanding and means of the poorest; and every post-office throughout the country being a *dépôt* to receive parcels, the scheme will be brought to the door of every one. Some idea of the extent to which the parcels' business will probably grow when the vast agency of the Post-office is set in motion, may be gathered from the experience of the telegraph department, the number of telegrams having increased during the past decade from twelve millions to nearly thirty-two millions annually. Thus, the whole country being brought into complete correspondence with itself, and its telegraph business having nearly trebled in ten years, it may be expected that a somewhat similar development will follow upon the inauguration of the Parcels' Post.

This new business of the Post-office must, however, prove vastly damaging to public carriers generally, the railway Companies excepted. Those carriers who make a trade of collecting parcels in the large towns, and of packing them for transit over the railways in bulk by goods-trains, will inevitably lose a great part of their business. The railway Companies will not suffer, however, for they will be partners with the Post-office, and will share in the business lost to the packers. The Post-office has acquired and maintains so great a prestige for punctuality and reliability, that no Company or undertaking in the country could withstand its competition.

It is impossible to predict what the financial result of the new scheme will be, nor for some

years is it likely that this will be ascertained. At the outset, there must be incurred great expense in providing additional space in all large offices, and in superseding rural foot-posts by horse-posts, over and above the cost of providing additional indoor staff at all important offices. How far the revenue will cover these expenses, experience alone will show. There is one thing at any rate that may be safely predicted, which is, that the new Parcels' Post will prove as great a public boon as the government monopoly of the telegraphs has done.

THE BLACK BUOY.

'SWIM?' said Grandmamma, as we sat round the crackling billets one Christmas Eve. 'Every boy and girl should learn to swim. Why, I could swim like a duck when I was a girl. Dear me, dear me!'

Grandmamma sat bolt upright in her high-backed chair, resting her elbows on the arms, and smiling across at Grandpapa—who sat on the other side of the hearth—with a conscious look in her bright old eyes. Grandpapa, the General, pausing in the act of raising his tumbler to his lips, nodded and smiled back again at Grandmamma. They were both white-haired, bright-eyed, and rosy-cheeked; both sat, straight and erect, in tall red-cushioned oak chairs; and each saw the other through an effacing medium, that smoothed out wrinkles, restored hyacinthine locks, and blotted out the fifty years that lay between them and youth.

Now, when we, the youthful descendants of this stately pair, grouped in lazy attitudes around the vast roaring hearth with its tall carved chimney-piece, saw the meaning looks that were exchanged between our respected progenitors, we scented a story. And when a many-voiced appeal for the story broke from us, Grandmamma hesitated for a moment and shook her head, then looked across to Grandpapa, who nodded again, and after a little pressing she thus began:

You know, young people, that you are of good family only on your Grandfather's side, and not on mine; for he came of an old and honourable stock, while my father was only a ship's bos'n. My father was killed in a great sea-fight, when I was only a little child, and I was brought up by my Grandfather, who was ostensibly a boat-builder and fisherman, in reality a smuggler. A successful smuggler too! In those days, smuggling meant great risks and enormous profits; for duties, especially on foreign wines and spirits, were exceedingly high. It was not only a profitable trade, but it was reputable in a peculiar sort of way; for it required great courage and great skill. England was always at war in those days, and the smuggler ran the risk of being snapped up by an enemy's cruiser as well as of falling into the clutches of a revenue-cutter. In addition, there were the inevitable chances and dangers of the sea. So that a good smuggler had to be

not only a man of great daring but of great knowledge of navigation. He had to work into harbour on the darkest nights—for it was only on dark nights that he could venture on 'a run'—with the utmost secrecy and despatch. To do that, he must know every inch of his way, be able to distinguish landmarks and buoys where an unpractised eye would only see indistinct blackness, and know to a nicety the time the tide turned, the twists of the sandbanks, and the position of sunken rocks.

My Grandfather could neither read nor write, and he had, as I think for that reason, a wonderful memory. He was assisted in his work by my two uncles, both illiterate men like himself; and the three seemed to find their way, through long practice and acute observation, as if by instinct. There was only one channel leading to the landing-place; the mouth of the little river where we lived being almost choked by sandbanks, which ran out to some distance. It was necessary to hit this channel a considerable way out at sea, and a small black buoy bobbed up and down to indicate its commencement. One side of the harbour was formed by a line of rocks, jutting out to some length and shelving down gradually into the water; and the buoy was distant from the extremity of these rocks about three-quarters of a mile. This headland was called the Point.

The black buoy, a mere speck on the waters, was hard enough for any one to find in the broad day; yet my Grandfather never failed to find it in the dark—for of course it was only on a moonless night that he could hope to run a cargo. The usual course of proceeding was this. The lugger arrived off our coast at nightfall, lay to until a signal was flashed from our friends on shore, and then found the entrance to the channel, and worked in with the tide. It was necessary to be very careful in hitting-off the channel at first, where the buoy was, or they might ultimately run on the sunken rocks at the extremity of the Point.

Grandfather and I lived in a pretty cottage at one extremity of the village. Our house was better than most of the others, for Grandfather had money in the bank, and was well to do. The cottage was covered with honeysuckle and creepers; at the back was a well-stocked kitchen-garden; in front was a grassy bank sloping down to the sand, at its junction with which stood our wooden boathouse. By the boathouse lay three or four of our boats, broad, strong, and unwieldy; and opposite the boathouse were the moorings of the *Little Lady*, our naughty, fast-sailing, clever little lugger.

I had a very independent, irregular kind of life. My Grandfather was often away for days at a time, and the old woman who looked after the house—for Grandmother was dead long since—would have had little time for scouring and cleaning if she had tried to look after me. I got

a little book-learning from the old vicar, but it was not enough to hurt me. No, my dears; I knew no Italian, or Latin, or Algebra; but my eyes were none the less bright, my lungs none the less clear, my colour none the less blooming that I passed most of my days in the bright sunshine and the free fresh air. I could run a couple of miles and jump a gate; I could pull an oar with the best, and I could swim like a duck. I was thoroughly at home either on the water or in it. The sea had no terrors or difficulties for me except such as it was a pleasure to overcome. So at sixteen, I am told, I was a fresh-coloured, free-limbed, bright-eyed young maid, whose only trouble was her long tresses of thick brown hair, and who bothered her head very little with the other sex.

Not but what I had my admirers. But they were limited in quantity and coarse in quality. I mean, rough; manly enough, but lacking in that refinement which a young girl in any rank of life always longs for, and with sometimes sad results. Anyhow, the bold young fishermen who made sheepish overtures to my formidable self, excited nothing on my part but polite amusement, and I was quite heart-whole. I was very happy, had a wonderful appetite, was sound in wind and limb; and perhaps, young people, you have to thank the rough freedom of my early life for the excellent constitutions which you now enjoy.

On a certain day in September, when I was nearly seventeen years of age, my Grandfather being absent on one of his expeditions and expected back at night, I set off for one of the long rambles in the country which I was in the habit of taking when he was away. As I was not allowed to go off in this fashion when Grandfather was at home, I made a big day of it, starting immediately after breakfast, and taking some bread and meat with me for dinner. I rambled much farther than I intended, lost my way more than once, and the night was coming on apace when I returned. Tired and footsore, I was taking a short cut over the heathery cliffs, where was only a narrow track made by the sheep, when amidst my dreamy anticipations of supper and bed came the recollection of a little serge bathing-suit which I had meant to fetch in the morning in order to repair it. The little cave where I kept it was among the rocks of the Point, and from where I was, being already on the seaward side of the village, it was not far distant. So I stepped out briskly and soon came to the little gully or ravine in the rocks which led to my cave, and up which, in the course of the night, our smuggled treasures would be stealthily conveyed. Carts used to stand at the upper end of it to take them away.

I slipped into my cave, felt for my dress and found it, and too lazy just then to face the ascent up the gully again, stood gazing out to sea and wondering where my Grandfather was at that moment. Then I turned homewards. I had got about a third of the way up the gully, which was very dark, when I heard a strange sound. I stopped to listen. It was not the scream of a sea-bird nor the moaning of the sea. It came down the gully and drew nearer, beat, beat,

with a little, very distinct jingling sound. It was the tramp of men and the clink of steel. Soldiers! I had never seen any; but I guessed what they were. In a moment I had scrambled cautiously up the rocks, and, hidden behind a ledge, I crouched perfectly still, with every sense on the alert. Suddenly the measured tramp ceased, and presently two men came slowly down the gully, talking in low voices. They wore long cloaks, and their weapons jingled as they walked. They passed me and stood at the lower end of the gully. The air was very still, and I could hear every word they said.

'This is the place, sir,' said the bigger and stouter of the two. 'The goods are landed a little to the left here, carried up the gully, and received at the top by the carts. The carts stand where we came down.'

The other, who, by the ease of his bearing and the deference of the big man, I took to be an officer, had a paper in his hand. He looked around him, evidently taking in the features of the place.

'There won't be any carts to-night, sergeant,' he said in a pleasant voice. 'The people in the village know we are here, and are sure to warn them. I hope they won't manage to warn the man we want.'

'Not they, sir,' answered the sergeant confidently. 'Not a boat can leave the harbour without its being stopped by our men; and not a man can leave the village and come in the direction of the Point, if you post the men as I venture to suggest.' Here the conversation became inaudible for a moment. 'A man at the top of the gully, sir, and the others at intervals on the seaward side of the village. You and I, sir, to manage the signal down here, and then I step up to the man at the top of the gully, one calls in another, and we are all down here ready to receive them.'

'By all means,' said the officer; 'and as you know the place and I don't, you had better post the men.—By the way,' he added, scanning the paper in his hand and holding it close to his eyes, 'at twelve-thirty, I think it is, the signal. You undertake that, don't you?'

The sergeant produced something, probably a lantern, from under his cloak. 'Here is the signal, sir.'

'Then we're right.—Now, post the men.'

The sergeant saluted and clanked up the gully; while the officer walked slowly towards the water and stood at the edge—some distance from me, for the tide was getting low—with his head bowed, and his hands clasping the paper behind his back. I ventured to breathe freely again, and began to review the situation. What did it all mean? It meant that the authorities had got wind of my Grandfather's doings, and had sent this detachment of soldiers to take him in the act. It must be my Grandfather, because there was no one else in the village likely to be aimed at. And if they caught him, what then? What was this form of words that kept ringing in my ears over and over again? 'Transportation for life!' What was that? It was no uncommon punishment, I had heard, for a smuggler taken, as my Grandfather was likely to be, red-handed. For a moment the hope flashed into my head that he

might not come that night. But no! The wind was light, and not unfavourable; there was no suggestion of a fortunate storm in the sky, and I knew that our friends with the wagons had arranged to come and that all was in readiness. My heart sank within me as I thought of my old Grandfather's gray hairs dishonoured in the felon's dock—for I had once seen a man tried—and his kind old face bidding me farewell for ever. I bowed my head on my hands and longed to cry.

Suddenly I raised my head, and my heart beat with a bold resolve. I would save him. Yes, I! The skill that I had attained for my own heedless pleasures should be put to stern service. My resolve was this. When the lugger showed her signal in answer to that treacherous one from the shore, I would swim out to the buoy, and keep myself afloat at the entrance of the channel until I could hail our people and warn them of their danger.

I never hesitated after I had formed this resolution. I forgot that I was tired and hungry, put aside the thought of cold or exhaustion in the water, and began instantly to make my preparations. On the narrow ledge of rock where I now knelt, I undressed and put on my little bathing-dress, which consisted only of a tunic and drawers. My own clothes I made into a bundle and stowed away behind a stone. Then, like a cat, I clambered up the rocks, hiding behind every projection, and keeping a fearful watch upon the sentinel at the head of the gully. Fortunately, the gully was not very deep. When I got to the top, I crept on my hands and feet until I judged I was well out of sight, and started for the end of the Point. I took my time, for there was no hurry, and I had to husband my strength; and at last I reached the rock from which I meant to start. There I sat down to wait.

I did not know the time and could only guess it by calculating from the sunset. How long should I have to wait? How long did I wait? Heaven knows; but it seemed an age. I got sleepy from my day's exertions. The night-air was cold too, and my clothing, however well adapted for exercise, was somewhat scanty for sitting in. Besides, it was damp. The wretchedness of that long watch comes over me now. Oh! would the slow minutes never pass?

Thicker and thicker grew the gathering darkness. The waters and the heavens were blended in obscurity, and there, at the end of the rocks, I sat patiently, a poor little figure shivering in the gloom, listening to the lap of the waves as they beat upon the rocks, and peering out to sea with all my heart in my eyes. I waited so long that I believed I must have fallen asleep and missed the signal, and at the thought I was burying my face in my hands, to give way to despair, when something stopped me—and flash! far out on the dark sea, there it was! I sprang to my feet, every nerve tingling. The moment for action had arrived.

I paused for a moment to picture to myself the bearings of the buoy. I knew exactly how it lay from the Point, for I had swum round it often enough. But not in the dark! Not with the water a vast black plain mingling with the black sky; not with the fear of sinking to those

mysterious depths, unseen, unheard, unhelped. But I never hesitated. Into the cold flood I plunged, and struck out boldly in the direction I had determined upon. After a few vigorous strokes, the sense of active exercise, exultation in physical power and use of skill, overcame my misgivings. But they came on again when I looked around on that murky waste of waters. Could I be sure I was going in the right direction? Might I not swim and swim and never find that of which I was in search, lose myself and become exhausted—to sink beneath that silent sky, alone?

But on I went, struggling hard to keep my wits about me in spite of the horrors that would rush over my brain again and again. It was hard physical work too, for the tide was coming in; there were breakers in the shallows, and in the channel the stream was fast and strong. It was impossible to see more than a few yards ahead, level as I was with the water. With the tide running so hard against me, it was difficult to judge how far out I had succeeded in getting. Once I all but gave up. I got out of the channel among the breakers, and the buffeting and beating bewildered me, so that I fell into a sort of panic. I threw myself on my back, and in the very act—thanks to my practised eyesight, that could more or less see in the dark—I caught sight of the buoy. There it was, bobbing up and down, looking to me like a thing of life. I swam to it and kept close by. It was like a friend in all this desolation of heaving seas. But now came the worst watch of the whole. The lugger must inevitably pass within hail of me; but what if my strength gave out before she came? For my strength was ebbing fast. I had been without food since noon, I had walked many miles, swimming is an exacting exercise, and I had still to exert myself resolutely with the tide running fast, to maintain my present position. My limbs moved mechanically, my head was dull and heavy, and there was a sort of tingling in my ears. I knew I was going fast.

A little gleam of parting waters, a black mass looming blacker than the darkness, and I summoned all my energies for a shout. '*Little Lady*, ahoy!'

A voice came from the darkness. '*Little Lady* it is. Who are you?'

'Lay to, and throw a rope over your starboard quarter.'

The lugger was not thirty yards distant. I made my last effort and swam to her. A rope was thrown; they hauled me on board; and I had just time to give my warning before I fell fainting on the deck.

When I came to, the last keg of our cargo was being lowered into the sea. We were some little distance up the coast, and floats were attached to the kegs so that we might be able to find them again. So expeditiously was all this done that it was only some two hours afterwards when we beat cautiously up the channel and cast anchor opposite the mouth of the gully. We pulled ashore in our boat. As she grounded and we leapt out, dark figures started up around, lights flashed upon us, and we were surrounded by soldiers.

'In the King's name,' said the young officer, advancing with his sword drawn and his cloak thrown back to show his scarlet uniform.

It was a picturesque group illuminated by the flickering light of the soldiers' torches. My tall, old Grandsire with his weather-beaten face and gray hair; the boyish, handsome young officer, bright with scarlet and steel; the stolid seamen in their blue jerseys and sou'-wester; the soldiers with their bronzed faces and glittering accoutrements; and, I suppose, myself keeping under shelter of my stalwart Grandsire, disguised as I was in a suit of oilskins and a big sou'-wester that almost covered my rebellious hair.

My Grandfather said nothing when the young lieutenant ordered the sergeant to board the lugger, and only a quiet twinkle of his keen gray eye showed his enjoyment of the scene. He stood looking up at the sky, while the lieutenant kept his eyes fixed on the ground and toyed with his sword-belt. The soldiers had to row, and clumsily enough they did it, provoking one of the stolid seamen to a loud guffaw which was instantly suppressed.

The sergeant was back again pretty soon, his red face turned to purple with wrath. 'We've been made fools of, sir,' he exclaimed, saluting the lieutenant. 'Nothing on board except some nets.'

The lieutenant's face fell for an instant; then he looked at the sergeant's wrathful countenance, and bit his lips to keep from smiling.

The sergeant was at white-heat. 'With your permission, sir, I'll search these fellows,' says he.

'If you like,' answered the lieutenant carelessly.

The search was soon accomplished, and they found nothing that they wanted. I kept behind my Grandfather's back, hoping to escape observation. But the sergeant caught me by the wrist. My Grandfather interposed.

'There is nothing contraband on that boy,' said he peremptorily.

'We'll soon see that,' answered the soldier, grasping my wrist until I could have screamed with pain.

My Grandfather did not strike him, but administered a kind of push with his heavy shoulder that sent the sergeant, big as he was, staggering a yard or two. With the losing of his hold, I slipped and almost fell; off went my sou'-wester, and down, alas! streamed my long brown hair all over me. The young officer instantly stepped between the sergeant and me.

'I don't think we need search this youngster,' he said in a tone of quiet authority. 'He is not likely to have anything contraband about him.—Where have you been to-night?' he added, turning to my Grandfather, while I got into the background, conscious that the young gentleman's quick eyes had found me out.

'Lobster-fishing,' answered my Grandfather unblushingly.

'Not much sport, I'm afraid,' said the lieutenant, looking abstractedly over my Grandfather's shoulder.

'Not a great deal,' answered my Grandfather. 'But we've taken as much as you, sir. Perhaps you would like to come with us some time and we might do better.'

'Perhaps I will,' answered the officer, still glancing over the other's shoulder. 'Meanwhile,

I am sorry to have caused you or yours any annoyance. Good-night to you.—Fall in, men!’

And away they went.—But my Grandfather gave up the trade after that and sold the lugger.

Grandmamma paused, and looked at Grandpapa with a smile.

‘And did you never see the lieutenant again after that?’ inquired a bright girl of fourteen, with long brown hair, probably like what Grandmamma’s once was.

‘My dear,’ said Grandpapa, ‘I was the lieutenant.’

A WORD OR TWO UPON FRIENDSHIP.

FRANCIS BACON closes his essay on Friendship by saying that ‘where a man cannot fitly play his own part, if he have not a friend, he may quit the stage.’ We cannot conceive a more wretched existence than to be entirely without friends. Unhappy indeed must that man be whose life has become so depraved and selfish, that in counting up all his acquaintance, the reflection forces itself on him: ‘I have not a friend in the world.’ Well indeed may Bacon say ‘he may quit the stage.’ He that would have friends, ‘must show himself friendly;’ and therefore, if it chance that any read this who are inclined to say, ‘I have no friends,’ let them be sure that the fault is, as likely as not, entirely theirs, and not that of the multitude around them.

Men are too apt to lament over the fickleness of friendship, which indeed is deeply to be deplored; yet in nine cases out of ten, if inquired into, it will be seen that this was due to their own fault in choosing such a friend, or to their own indiscreet actions subsequently. The first and most important step is in the choice of friends; and for this, it is very necessary that one should consider the object of friendship, and prove slowly—step by step—that there is such a communion of feeling and unity of purpose as can alone make friendship firm and lasting. If we desire to form a friendship for some particular object that we have in view, but cannot otherwise obtain, then our motive is unworthy, and we must not be surprised at finding a sudden cessation of the friendship before that object is gained. As friendship is slow in its growth, so it should be tough and lasting in its endurance; and there should be the greatest charity and forbearance on both sides ere one link of the golden chain which binds it is rudely snapped asunder.

The friends thou hast, and their adoption tried,
Grapple them to thy soul with hooks of steel;
But do not dull thy palm with entertainment
Of each new-hatched, unfledged comrade.

Friends should be few—that is, those whom we would retain as bosom-friends; and they should be those on whom we can depend, for some firm and solid reason other than a mere sentiment, which may be changed and altered by more powerful motives; for any feeling that is based on sentiment only, and has no solid reasons to support it, must in time alter as that fact becomes apparent. There are few who can enter into the deep and earnest friendship which David so feelingly describes as between him and Jonathan:

‘Thy love to me was wonderful, passing the love of women.’ A man’s duties and every-day work would in many cases preclude him from cementing friendships of so close and sacred a character. Time or opportunity might not admit of his communicating and interchanging thoughts, feelings, and ideas which would be necessary to insure and foster them. But he may be on terms of friendship in different stages and degrees with every fellow-creature with whom he comes in contact. It is not too much to say that there is some spark of goodness even in the most degraded of our race, and therefore it should be the anxious endeavour of every one desirous of obtaining friendship to find the common ground of association between himself and his fellow-man; to claim it and cherish it, and gain a friend on that one ground, if all beside should proclaim rather an enmity—but which a friendly nature would be careful not to declare in an unfriendly way. So in all our troubles and cares, our anxieties and misfortunes, our pleasures, our joys, our successes, we would have a multitude of sympathising friends; and they would be *real* friends in the degree that we have thoughts in common; and by the common tie and feeling we could always claim them. We should not mistake as friends mere acquaintances of whom we know nothing; or familiar faces. The chances are that there are many whose names we do not even know, more firmly united to us in friendship by the bonds of common feeling, hopes, and inspirations, than those to whom we are accustomed to bid ‘good-morrow.’ True friendship is a noble thing, and there are many instances of its perfection.

Some one may say: But what is the use of friendship? It is this—the intermingling of ideas and affections with each other, which, if fully carried out, would bind humanity with an encircling cord, rendering wars and tumults impossible, and the diffusion of the arts of peace and domestic comfort more practicable. In the narrower sphere of individuals, as Bacon says, ‘It is the ease and discharge of the fullness and swellings of the heart, which passions of all kinds cause and induce; for as there are diseases of stoppings and suffocations most dangerous to the body, so are there also to the mind. We take medicine for the one; but no receipt openeth the heart like a true friend, to whom you may impart griefs, joys, fears, hopes, suspicions, counsels, and whatever lies upon the heart to oppress it, in a kind of civil shrift or confession.’ The loss of fortune often is the forerunner of the loss of ‘friends,’ so called, but who in reality are none; merely attendants on fortune, and for whom, if we acted wisely, we should have no other feeling except of pity. And to guard against such disaster, let us remember that it is not the fawning professor who is most likely to prove the ‘friend in need.’

Friendship real and true is that which suffers even death for its friend; that no hardship or trial or adversity can shake off, using plain and outspoken admonitions and warnings in prosperity, and kind and gentle advice and assistance in adversity.

INFERIOR SOCIETY.

WE suppose there are few persons who do not believe in 'the deteriorating influence of inferior society.' Even the thoughtless, if made for a moment to think, and the vain, who love to be associated with flatterers, would, if urged to confession, admit the evil they often so heedlessly encounter. But what is inferior society? That is the question which has to be considered, detached from all its surroundings, and finally answered, before we can arrive at definite conclusions to help us forward.

Certain democratic writers of fiction are rather fond of choosing for their heroes and heroines low-born persons, often the mere waifs of society, endowing them with almost superhuman virtues, and a strength of purpose and of innate rectitude which enables them to triumph over all evil temptations, and win for themselves an exalted and honourable position. Far be it from us to say that there have not been such careers as these novelists indicate, bright examples of what can be done under difficulties; but if they were the ordinary rule of circumstances, there would be little need of schools and reformatories, and of the elaborate machinery which governments and individuals put in force to educate and civilise and elevate a nation.

Perhaps only those who have been brought into contact with that most forlorn of all created things, 'a neglected child,' can estimate how much we all owe to early training, to the fostering of good instincts, and the crushing out of evil ones, and can comprehend the terrible disadvantage at which the very ignorant are placed. But the ignorant man or woman who has sense enough to be aware of his or her ignorance, and who eagerly takes advantage of every opportunity of enlightenment, ought not to be classed with those who exert a deteriorating influence when brought into contact with their superiors. On the contrary, such individuals often stimulate for good those to whom they look up for guidance. There could be no learning or moral progress in the

world, if there were not a certain association of teacher and pupil, of the wise and the foolish, the good and the bad.

Now, as in most lives a vast amount of knowledge is almost unconsciously acquired, and surrounding influences go far to mould character, the mingling of different orders of mind to which we have alluded is a great boon to the inferior ones—it is their chance of moral and mental improvement. But there is a danger to the so-called superiors, if their superiority is more apparent than real. Every one has heard the story of the parrot which, having learned on board ship a number of oaths and vulgar phrases, terribly shocked the lady to whom it had been consigned as a present. But the bird was a beautiful creature; and the owner desiring that it should be trained to speak with propriety, sent it to keep company with a more carefully educated parrot belonging to a friend, in the hope that the stranger would forget its oaths and sailors' jargon and acquire a different vocabulary. Alas for the result! The new arrival quickly contaminated the other bird, which learned the objectionable phrases that were so much deplored, without imparting its own pretty little speeches and snatches of song to the culprit.

Perhaps if the indecorous bird had been introduced to two or three properly conducted parrots, instead of to only one, the good influence would have been strong enough to prevail, and the offender might have become a reformed character, instead of the corrupter of another. This old story of the two parrots has always seemed to us to point a moral, and show how necessary it is that in organising our society, the good, when necessarily brought into contact with the evil, should, in numbers or in strength, prevail over the bad.

Few families are so fortunate as never to have experienced the evil of a vicious influence operating on some of its members. It may have been speedily apparent, and speedily vanquished accordingly; or it may have been subtle and specious, and have done great mischief before

it was even suspected. In either case, the sort of 'inferior society' at which we are glancing is quite as likely to have been on what is called a social equality as not. Low-toned people, who corrupt morals by their bad example and evil communications, belong to all stations of life.

How often does it happen that a plausible acquaintance establishes a footing of intimacy with some young person, and without planning any special injury, achieves it nevertheless. There are so many by-paths of alluring aspect in life, but which lead to misery, that we all, and the young especially, are in constant need of the controlling sense of duty to keep us in the high-road. Woe be to those who have a tempter at hand to lure them astray, and to teach them to confound pleasure with happiness, if such tempter wears the mask of friendship, and has won their regard! Those who understand children best, are always alive to the importance attached to the choice of youthful playmates and associates, even from the earliest age. For the exercise of the imitative faculty seems instinctive with most children, and biographies of eminent people, especially autobiographies, constantly reveal the lasting influences set in motion in quite infantile years.

But the imitative faculty is not extinct when childhood is past, and there is an order of shy people who are particularly exposed to the temptations of inferior society. What we call shyness is often very closely allied to pride. There are people who take little or no pleasure in any society in which they do not themselves shine. They forget the high esteem in which a patient and intelligent listener is held by good talkers, and feel hurt at seeming of no consequence. Such shy people are very apt to fall away from the social circles in which they might find mental improvement and enlightenment, and gravitate to a lower scale, where they feel themselves of importance. The worst of the matter is that such persons are almost always self-deceivers, and think their shyness comes from humility instead of pride. Another sort of shyness, springing from another sort of pride, induces people to shun general society altogether; and then they need be on their guard against some baneful individual influence of an inferior sort. This is especially the case with shy young men, who make what are called low marriages, or, what is really morally worse, trifle with the affections of girls in an inferior station. Perhaps at first they mean nothing worse than the gratification of their own vanity; but some of the saddest of sad stories have had this sort of beginning.

We once heard a very shrewd sensible woman, the mother of a large family, speak to the following effect: 'My husband and I are very choice in considering the acquaintances we now make, for our children's sake. Our friends' children will, in the natural course of events, be their friends,

and perhaps even more closely allied, and we feel that we cannot be too particular as to the intimacies we may form.' They were wise words; for the hasty, ill-considered, unfortunate intimacies of youth are often found to be a clog all through life.

Young people whose characters as yet are but partially developed, are very apt to strike up sudden friendships on the basis of some temporary and superficial sympathy which has no real depth. Ardent professions of attachment are made—perfectly sincere for the time being—but often circumstances arise which develop character and change the position of affairs. One mind greatly expands, while the other either stagnates or deteriorates; one moral nature, strengthened by some fiery trial, rises purified; while the other succumbs to some grovelling temptation. It is impossible the tie between the two can remain unstrained, for sooner or later it must be broken. In such cases as these, the lower nature too often reviles the higher for its 'changeableness' and 'caprice,' though probably the change of feeling has been resisted as long as possible, and only acknowledged at last to the conscience with great pain. Well is it if there has been no obligation conferred by the inferior nature on the superior, to be considered a life-long debt incapable of being cancelled.

But there is one sort of 'inferior society' which is perhaps even more 'deteriorating' in its influence than the companionship of low-toned people. If it be true that Books are 'the best of all good company,' the adage can only apply to good books; for it is no whit less true that bad books are the worst of all companions. Many books are very subtle in their evil influence, so subtle, that the mischief they do is long unsuspected. And yet we think there is a test by which we may know the wholesome from the evil in literature. Does the reader feel stronger and wiser—more ready for work and endurance, with a higher ideal of duty and character, and of the possibilities of human life, when he lays down the book which has engaged him? If so, he may be sure that he has enjoyed 'the best of all good company,' and will, moreover, have acquired a distaste for that which is poorer.

The subtle bad book, however, leaves a very different impression. The reader probably rises from it discontented and querulous, inclined to excuse his own faults, as so much more venial than those of the people in whom he has just been interested; with his ideal of duty and human character lowered instead of raised, and with a general sense of disorder in his mind, that proves the unwholesome food it has been receiving. The present writer has assisted at the burning of more than one thoroughly bad book, and is ready to apply the match again whenever it is expedient to do so. We never know into what hands a bad book may some day fall, or what mischief it may occasion; but when we see the pages

yielding to the flames, at least we feel that with regard to that one copy its power is over. Bad books always deserve condign punishment, and there is a consolation in knowing that sooner or later they will find it. Truth alone prevails in the long-run. Truth, that moral truth which through all the ages finds a response in the higher attributes of the human heart, can alone float a book down the stream of time, and render it a delight to succeeding generations.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER XLV.—'CONSTANCE! MAYBE GOD WILL BE GOOD, AND LET ME SEE YOU HAPPY, AS YOU NEVER COULD HAVE BEEN IN THIS WORLD.'

DAYS before Garling's death, Constance and Val had left Cadiz on their homeward route, and Mary had travelled with them in attendance upon her mistress. Constance had written to her aunt Lucretia, telling her of the new hopes and fears which dwelt about her, and entreating a renewal of her old friendship. The old lady came down, in answer to this letter, to meet her at Southampton, and received her very kindly; but she encountered her ancient favourite Val Strange with inexplicable and inflexible enmity. 'Don't tell me, my dear,' she said in answer to her niece's remonstrances; 'he left you alone at the beginning of your sufferings. I know it all. Everybody has talked about it. He was a faithless friend, to begin with, and he's a bad husband; and I will never speak to him again.'

'He is not a bad husband,' Constance answered, weeping. 'We have had cause for trouble, and we have been unhappy, but never, never, through any want of love on either side! And dear aunt, help us to be happy now. We shall have cause to be happy now.'

Aunt Lucretia wept with her, and relented partially, for Constance's sake. But against Val she was implacable, and she treated him with a distant coldness which pained him deeply. The elder Mr Jolly met the little party in town, having constrained himself to leave Paris in honour of the expected event; for which, without anybody precisely knowing why, he seemed to appropriate to himself an amazing credit.

'My dear Valentine,' he said, as Val sat moodily over his wine and a cigar, after dinner, on his first night in England, 'it has always been my practice to endeavour to make the best of everything. We have proverbs on our side: Love laughs at locksmiths, and All's fair in love and war. And apart from the romantic and sentimental aspect which, to eyes more youthful than mine, the case may wear, I console myself with the reflection that the marriage is a *fait accompli*. Your proceeding, I presume I may acknowledge without any danger of offence, and certainly without any intention of being offensive, was—er—a little startling. But all that is over; and you are prepared to encounter the commonplace of life, and I presume to stay at home, become *custos rotulorum*, and discharge the duties of a good landlord. I have always maintained that the one claim a father has to consideration in affairs of this kind is that he is interested in his daughter's

happiness. I am not without the emotions common to paternity; but I have never been inclined to obtrude my anxieties, and I will not obtrude them now.'

Val said 'Yes' and 'No' and 'Of course'—at the right places, for the most part; and Mr Jolly was absolutely satisfied with him, and with himself. When they all left London, he was established in free quarters in Val's house at Brierham; and he felt a pleasurable glow in the fact that this eligible family mansion was henceforth his daughter's home, and that in those days when Paris might seem dull to him, he would find a shelter here. It is perhaps unnecessary to say that had Val been poor instead of wealthy, Mr Jolly's ideas on the moral and sentimental aspect of the elopement might have undergone development in a different direction. Val himself was filled with anxious thoughts; but he too, like Constance, looked for a veritable sacrament of love in the birth of a child. But his emotions were not of that boisterous and thick-skinned quality which can bear to find vent in the presence of strangers; and thus, except in those now rare moments when he and his wife were alone together, he wore rather a morose and preoccupied air. Miss Lucretia set this down to a desire on his part to be away from the place, and charged him in her own heart with a perpetual longing after the fleshpots of a bachelor's Egypt. Not all Constance's faith in her husband's affection, nor Val's own constant presence in the house, could weaken this belief of hers. Women can be amazingly cruel on occasion, and the old maiden lady relented not to Val. He bore everything with patience, even with seeming apathy, strengthened inwardly by new hopes, and chastened by fears new and old.

In the midst of all this, news reached him that Gerard Lumby had returned, and had again taken up his residence at Lumby Hall. Before Constance had recalled him to her side, he had fallen into such a mood that he would not greatly have cared had he been called upon to expiate his falsity to friendship with his life. But now he had a reason for living, and he meant to live. He listened anxiously for tidings of Gerard and his manner of living; and such small items of news as reached him were reassuring. The defeated rival seemed at length to have settled down, accepting his defeat. Val had no wish to remember against him that wild night in the Mediterranean. He knew he had given horrible provocation; and he even looked to his own devotion to Constance as one means of appeasing Gerard's hatred. He laid plans for the future, and resolved, if things went well with him, that he would migrate to another county. He did himself more justice when he admitted that Gerard would find it unpleasant to have him for a constant neighbour; and since it seemed well that one of them should move to a distance, it seemed well that he should be the emigrant. He had robbed Gerard of enough already. He would not rob him of the house in which his ancestors had lived so long, by poisoning the air about it.

Let me say once more that Val Strange was not meant by nature to live disloyally. But fate is just, and his very virtues tore him.

Gerard in Cadiz had asked Hiram one question:

'Is she here?' Mary's unlooked-for presence had dictated this inquiry.

'She is,' Hiram had responded. 'She's goin' to England, and her husband's with her.'—Gerard started, and paled ever so little; but Hiram watched him with glittering eyes which missed nothing.—'They're going home for a special purpose. I reckon if it turns out a son, that when he's grown up, he'd like to feel he'd been born in the ancestral halls. Anyhow,' added Hiram, 'I guess I should, if I was going to be born over again as a British aristocrat.'

Not even Hiram had rightly estimated the purposes which moved Gerard to the reckless and horrible revenge he had once attempted. He was not avenging his own wrongs, but the wrongs done to Constance by her husband's desertion of her. He did not understand, he did not even dream, that the thought of his own sufferings, and their disloyalty to him, had cast the shadow which lay like an impassable barrier between man and wife. To his mind, Val had been doubly a traitor—false to him, and false to the woman he had stolen from him. It was the belief in the second falsity which had stirred him to the contemplation of that crime which it was Hiram's happy fortune to frustrate. It was not likely that Val's return to his old home after so remarkable a disappearance from it, should go untalked of. The general verdict had been unfavourable to him at his going, and it was unfavourable still. Had Miss Lucretia's tongue been less active, it might have been otherwise; for a wealthy, good-looking, good-tempered young fellow, who has the loveliest woman in a county for his wife, is likely to be popular, and to find more serious crimes than a runaway marriage forgiven him. Even the parting at Naples, and Val's extended cruises in the Levant, would have been condoned and forgotten; but it was murmured everywhere that Mrs Strange's aunt knew the naughty secret of their parting—that Val was guilty, and that she was implacable. After the lapse of a year from the date of his tragedy, foolish people felt justified in hinting at these things even in Gerard's presence, and the rumours reached him in a hundred ways.

A slow, bitter, awful fire of wrath burned in the young man's heart. By nature and descent, loyal and honest, but by nature and descent disposed to nurse revenge, his native virtue and his native vice of blood alike spurred him to hate his enemy. He said of himself, and it was true, that he would have roasted at a slow fire, rather than have deceived a friend as Val had deceived him. His own purity of honour made Val's dishonour all the viler. Yet even then, had Val continued true to Constance, and had she seemed happy with him, there was enough of heathen valour in the man to have hidden hatred and heartburning for a lifetime. But now, to his distorted gaze, Revenge stood consecrated by Hate and Scorn. He could leave Garling to the vengeance, or even the mercy of heaven, without an inward struggle. But Garling had not sought to rob him of his love; and Garling had missed his own prize, and had grown old on a sudden, and was near death's door, and had but a tottering reason left him; whereas this supreme criminal had succeeded in his crime, and having stolen his treasure, had thrown it

away. We know how false the popular talk was; but he did not. It found ready credence with him, and there was no baseness, however unexamined, of which he was not ready to believe that Val Strange had been or would be guilty.

But he, like the rest of us, was led by a way he knew not.

As the hoped-for yet dreaded time grew nearer in the house at Brierham, Val and Constance grew nearer to each other in confidence and affection. They looked forward, though with certain tremblings and forebodings, to a happy and united life. The child would lay a hand on each, and would hold them together to all times. But Val knew nothing of the county talk, and his moody troubled face bore no disguise that the dull wits of visitors and servants could be expected to look through.

The weather for many days past had been close and sultry, and had brought with it a feeling of depression, which affected both husband and wife. And now the time fraught with so much of desire and dread came on, and Val waited for news in the room in which Hiram Search first met him. For a time the messengers who found him waiting there, brought reassuring news enough; but in a while he was left altogether alone, staring out at the sultry noonday sky and the shadowless noonday fields. He waited a long time, and then rang the bell and asked for news. The messenger returned with an ominous face and an equivocal message; and after another anxious terrible pause of an hour, which seemed a year in its prolonged suspense, he was confronted by the doctor. 'Well?' he said. That was all. It was recorded against him afterwards, though the stern, almost savage brevity of the question meant Love on the rack.

'I may congratulate you on one side, Mr Strange,' returned the doctor; 'though on the other I am afraid there is scarcely room for hope.' Val looked at him stonily and said nothing. It was all set down against him with the rest, though his very heartstrings ached. 'Mrs Strange has implored me to allow her to see you. I am sure I need not ask you to be self-possessed, though I fear it can make little difference.'

There was a dryness in his throat and a fire in his eyes, as Val followed the doctor through the long corridor and up the stairs. A moment later, Constance reached feeble arms towards him.

'You have always loved me,' she whispered, 'in spite of the shadow that fell between us.'

'Always,' he answered huskily. 'I shall love you till I die.' He buried his piteous face in the pillow beside her, and those were the last words she heard in this world. The lax arm that lay across his neck told him the truth; but he did not move until some one entered and touched him on the shoulder. Then he arose and looked at the face before him for a minute, and walked away without a tear or a kiss or a murmur. It told against him in the common foolish tale; but in his soul lay the unutterable burden of coming hopeless years, and whatever broken gleam of light the world had held for him seemed at that moment to go out—for ever.

The doctor left the house of mourning, and was called to another case. He carried the news

with him; and before it was two hours old, Gerard Lumby heard it. He had shown grief once, and was on his guard now, and his Spartan heart carried him away alone to the rocky slope of Welbeck Head. To die loveless—the woman he had loved. If the man had loved her and been faithful to her, he could have borne to see her happy. As he thought this, and grief and hatred inextinguishable tore his heart, he sat upon a gray boulder, so still that he might have seemed a statue, in spite of the storm within. And behind him a pall as black as Death climbed up the western heaven, and blotted out the sun, and touched the zenith, and spread out and down until it draped the sky from west to east and from north to south. There was no sign of wind; but the vast sheet of cloud crept onward as if by its own volition, throwing forward great ragged feelers of the colour of red-hot copper. By-and-by this hue, as of heated metal, spread over all the doleful under-sky, and the face of the heavens was livid, as though some gigantic fury were held back there by the strong spirit of a god. Then, without further warning, before one drop of rain had fallen, or one sigh of wind had spoken to the ear, a flash of lightning fell, and close upon it came a roar so near, so sudden and so terrible, that he leaped to his feet, and whilst it lasted felt his own passions stricken deaf and dumb and blind. The rain lashed him like a whip, and the wind released, swept out of the western darkness with gusts against which he felt it difficult to stand. The lightning and the thunder seemed one, they came so close together; and the echoes of the first tremendous peal were still buffeting windily from rock to rock, when another came upon them, and smote their mockeries dead with overwhelming sound; and again the ferocious echoing laughter of the hills broke out, and again the thunder slew it, and again it rose, till the clamour seemed scarcely less of earth than heaven. And amidst all this, his passions rose from stupor, and leaped to madness, and for once in a life the forces of nature seemed strained to find voice for a human soul.

As he stood thus, resigned in unmeasured inward tempest to the storm, he saw on a sudden that he was not alone upon the headland; and in the next flash that split the gloom and held the landscape quivering whilst he might have counted three, he knew the figure of the man he hated. Val Strange was there, scarce fifty yards away, flying upwards along the broken path. Not knowing why he followed, Gerard sprang after him. It was as yet no more than evening; but the storm had cast a shadow which anticipated night, and the lightning was needed to show the way. In the deep gloom which followed every flash, he lost the flying figure; but with each succeeding flash it seemed cast out of night again, no nearer and no further than before. Strain as he would, he could not decrease the distance which separated them by a single yard. He never paused in the intensity in which every fibre of soul and body was set upon the chase, to think of a reason for his enemy's presence there. There was no thought within him apart from those the tempest spoke for him of madness and revenge. When he fell, as he did often, he felt no shock or pain. The storm gave the sole

counsel he heeded, and seemed to lift him on its wing, and yet with equal power to guide the other's footsteps.

Tempest-borne, pursuer and pursued fled upward. They were far past the Hollow, which lay below them on the right of their course, and from the first till now they had taken a precipitate road, a mere sheep-track, shunned by the feet of men. The subtle fluid showed the broad bare shoulder of the headland, and they were within three hundred yards of the sheer edge. Here for a second the hunted figure paused, and Gerard seeing this, paused also. In that second, he knew his purpose for the first time, and consciously surveyed it. Though they fell together, he would cast this villain over the precipice. He kept his eyes on the spot where he had last seen his quarry, until the lightning cast him out of the dark again, and then he saw that he was moving slowly onward. Gerard followed slowly, and they kept their distance still. And now the storm began to decrease in violence, and as he reached the summit of the Head, the pursuer saw that all along the western sea-line there was a yellow gleam of light, and that the clouds had broken there in scattered rags of purple, which trailed over a sky of tarnished gold. He saw, too, that this rift of gold was growing larger, and that in a little while the storm would cease almost as suddenly as it had fallen. Here, on the bare scalp of the headland, there was a gruesome twilight cast from the breach in the western clouds, and the lightning showed paler in it than it had done below, against the darkness of the higher skies.

He saw these things as one who did not see them, and all his thought was of the man ahead and how to stalk him. To go on at a rush might be fatal to his purpose; for he knew, from many a trial in boyhood and youth, that Val Strange was fleet of foot than he, and could out-distance and outlast him. So, with a cold deadliness of intent, as absorbing as the heat and passion of pursuit had been, he chose his ground, and crept from boulder to boulder, nearer and nearer. The rain had ceased to fall, and only now and again the lightning hung out its shuddering flame. The thunder rumbled miles and miles behind. The slower pace, the caution of the trail, and the cessation of the tempest, seemed to fit his mood anew, as completely as the wild chase and the tumult within had kept the tumult without in unison. He was within half a score of yards now from his quarry, and he crawled a little forward and coiled himself for a spring, when a wild voice broke on the late-born stillness.

'Good-bye all!' it cried. 'Good-bye to the world I did the devil's work in. Good-bye to the trusting friend I stabbed to the heart. God bless him. O Gerard, Gerard! And oh, my love, my love!' and the wild voice quavered down into sobs and murmured on brokenly. 'And the little baby four hours old. Good-bye. You won't know how your father died. They won't think the cold-hearted villain who played his friend so false, had the heart to die like this; or the heart to break as mine is broken. Constance! maybe God will be good, and let me see you happy, as you never could have been in this world.' The voice pealed out again madly, 'Good-bye—good-bye—good-bye, all!' and a staggering

step scattered the loose pebbles. Not six yards from the edge of the precipice lay a murderous figure coiled for a spring, and when the next staggering step came on, the spring was made. The suicide was caught in a grip of steel, and a voice cried out: 'Not that way, Val! Not that way!' And they were weeping wildly in each other's arms.

GAELIC PROVERBS.

'TELL me the proverbs of a people, and I will tell you what manner of people they be.' These little pointed sayings, in which a single flash of wit strikes fire from the gathered experience of past generations, give us a wonderful insight into the interior life of a nation. Reversing Burns's lines, we seem to be endowed with the gift of seeing our neighbours as they appear to themselves. In proverbs and familiar sayings, we have pictures of household manners and customs drawn by the people themselves, in perfect simplicity and unconsciousness; we catch glimpses of the farm, the chase; or, in more cynical mood, some little failing or weakness is revealed to us with quiet humour. And all this tells us more than whole volumes of travel, about the thoughts and feelings which lead to action, and the habits which are wont to be formed under these influences.

The collection of Gaelic Proverbs edited by Sheriff Nicolson, and published by MacLachlan and Stewart, of Edinburgh, is of singular interest, inasmuch as it opens up an almost unknown field of research, and preserves the memory of a state of things now past, or rapidly passing away. Where written records are few, as is the case among the Highlanders, proverbial lore seems to gain an added value. The book is based upon a collection published in 1785, which has hitherto been the only work of the kind in existence. It was made by the Rev. Donald Macintosh, who describes himself in his will as 'a priest of the old Scots Episcopal Church, and last of the non-jurant clergy of Scotland.' The book before us is carefully edited, with notes and illustrations drawn from varied sources; and the writer has a warm appreciation of the fine points in the Celtic character. The sayings are collated with those of other nations, which adds much to the interest of the subject. We find, as we might expect, a strong family resemblance between the proverbs of all the Celtic nations. Most of the more characteristic sayings are to be found in an Irish dress; and there are also parallels from the Welsh, Manx, and Breton languages. 'The Irishman's wit is on his tongue, but the Gael is wise after the time,' is a true distinction; and it is supplemented by the Manx: 'The Manxman is never wise till the day after the fair.' But what is very curious is, that we meet with many old familiar friends, apparently quite at home in their new surroundings. For instance, the saying, 'Every man knows best where his shoe hurts him,' is said to be as old as Plutarch; and every great European nation—even the Celt with his shoes of hide, and light step on the heather—has adopted the same form in speaking of a secret trouble.

Mr Nicolson is inclined to trace back the

origin of such sayings as have equivalents in Lowland Scotch, to the days before the reign of Malcolm Canmore, when some one or other form of Gaelic was probably the language of the whole of Scotland, with the exception of the Lothians. But then the Lowland Scotch is a direct representative of the old Angles, who held the Lothians during the period referred to, and has a perfect right to the paternity of its own proverbs. Then, again, there are those sayings which have parallels in the proverbs of continental nations. Doubtless, as Mr Nicolson suggests, Scotland had no want of communication with the continent of Europe, and the old French alliance has left distinct marks in this country. Many priests also were foreigners; and some of the young chieftains may have gone to the universities of Holland or Italy for their education. Still, this explanation seems inadequate in many cases; and looking to the large amount of proverbial wisdom which is common to all the nations of Latin or Teutonic origin, one is inclined to wonder if perhaps the original sayings were popular before the great migrations of our race, just as we find a common inheritance of fairy tales whose birthplace may be traced to the far East. To take two or three instances, pretty much at random: 'Well knows the mouse that the cat's not in the house,' is found in eight other languages; 'The blind of an eye is king among the blind,' has seven equivalents; 'Moss grows not on an oft-turned stone,' is found in Greek and Latin and nine other European languages. Under these circumstances, it is difficult to decide to what source we should look for the original root; but if any one could tell us how many of these widespread proverbs are to be found in Sanscrit, or in the modern languages of India, we might have some grounds for forming a theory how they arose.

Again, the experiences of our several lives, though they may differ widely in their surroundings, are curiously alike in essentials; and it may well be that one reason for the similarity of proverbs is, that all mankind have to learn the same lessons, calling the same qualities into play, and that they find the results of their summing-up not so very different after all. Such is the following: 'There will come in a day what won't in an age.' This is common to modern Greek, Latin, Italian, French, and English. It is an entirely abstract proposition; there is no picturesque allusion to catch the fancy; it is evidently drawn in each case from the deep wells of experience. In other cases, we meet with some central truth which seems to express the universal conviction of mankind, but which becomes clothed in strong local colouring, varying according to the varying circumstances of the people who give it expression. The proverb about counting one's chickens is transformed, among a race to whom the hillside was more familiar than the poultry-yard, into the caution, 'Don't skin the deer till you get it.' The Lowlanders went to the Highlands for a comparison, 'It's ill taking the brecks off the wild Highlandman,' which becomes peaceable enough in the Gaelic, 'It's ill taking horns from the hornless cow.'

In these proverbs, we are introduced to a people very much the reverse of the popular idea of the fierce and haughty Highlander of days of yore. There is much of the nobleness and generosity

of sentiment befitting a warlike race; but the people themselves are tillers of the soil, owners of flocks and herds, fishers on the sea. Poor they are, but full of patient cheerfulness, as may be seen in the saying illustrating their belief in the wise balance of things: 'In spring, when the sheep is lean, the shellfish is fat.' The numerous allusions to shellfish show how often the dwellers by the sea-shore were dependent on what they could find there. But in spite of the hardships of their every-day life, they are full of intelligence, with high conceptions of right and duty; they are close observers of nature; and many of their sayings have about them a shrewd and quaint simplicity, which has a flavour all its own.

There is a chivalry of feeling in their ideas of warfare, which is far removed from barbarism. True, there is a grim humour in the following: 'The Lowlander is the shorter from losing his head.' But many proverbs show a true sense of justice and honour, worthy of a knight of old. Here are two Ossianic sayings, both remarkable for their forbearance: 'Fingal never fought a fight without offering terms;' 'Neither seek nor shun the fight.' This is a noble motto for a sword: 'Draw me not without cause, nor return me without honour.' Again: 'Honour is a tender thing;' 'Honour is nobler than gold.' Many a Highland glen is deserted now where brave men used to dwell; but the old pledge, 'The clans of the Gael, shoulder to shoulder,' still wakens a hearty response from Highland regiments wherever strong arms and stout hearts are needed for the honour of Britain.

There are some interesting illustrations of clan-ship. 'To whom can I make my complaint and no Clanranald in Moidart?' originally said of the Clanranald who was killed at the battle of Sheriffmuir, has about it a touching wail of hopelessness. The following gives us a curious glimpse of a state of society long since passed away: 'It is not every day that Macintosh holds a court.' Macintosh of Monyvaird, Chamberlain to the Earl of Perth, held a regality court at Monyvaird; but it is commonly reported that he caused one person to be hanged each court-day, in order to make himself famous and to strike terror into the thieves, which severity occasioned the above saying. All readers of the *Fair Maid of Perth* will remember the cry, 'Another for Hector!' with which the heroic old foster-father devoted one after another of his sons to death for their chief. These words were really spoken at the battle of Inverkeithing (1652), where Hector Roy M'Lean of Duart was killed with hundreds of his clan. The attachment of foster-brothers is most marked: 'Dear is a kinsman, but the pith of the heart is a foster-brother.' Scarcely less strong is the sense of relationship: 'All the water in the sea won't wash out our kinship.' Yet, when we come to the various characteristics of the clans described by each other, they are almost always unfavourable: 'A M'Lean without boast, a M'Donald without cleverness, a Campbell without pride, are ill to find.' Again: 'M'Laine of Loch Buy, the chieftain of thieves.' The M'Gregors, however, are always mentioned with respect: 'Hills and streams and M'Alpines; but when did the M'Arthurs come?' and again: 'There never was a clown of the M'Gregors.' Some districts also come in for a share of the same bad character:

'What the Mull-man sees, he covets; what the Mull-man covets, the Coll-man steals; and what the Coll-man steals, the Treeze-man hides.'

We naturally expect to find a strong flavour of the sea derived from the Hebrides and the adjacent shores of the mainland; and the proverbs which come to us from this source are among the most racy and original of all. 'No wind ever blew that did not fill some sail,' is an improved form of the familiar, 'It's an ill wind that blows nobody good.' Making needless difficulties is happily described as 'Making a great ocean of a narrow strait.' For a man who piques himself on being always wiser than his neighbours, it is said: 'He knows where the whales breed.' For one who seems fated never to be in luck: 'When the herring is in the north, Red Malcolm is in the south.' Here is a brave and cheery utterance, peculiarly suggestive of the narrow seas, where the tide is a power not to be lightly set at naught: 'None ever got tide with him that did not get it against him.' Nor is the wind forgotten: 'I shall go to-morrow, said the king. You shall wait for me, said the wind.' What a world of suggestive tenderness and pathos lies in the following: 'There is hope of the man at sea, but none of the man in the church-yard!' To these may be added the following graphic little story. The small Hebridean islands of Ulva and Gometra are divided by a narrow channel, which is passable at low water. On one occasion, when the minister who had gone over to Gometra to preach—intending afterwards to return to Mull—was in the midst of his sermon, he was summarily interrupted by the beadle with the warning: 'Get on, Master John—the channel is filling!'

We turn with interest to inquire what weather folk-lore may be gathered from this new source, and we find that the testimony of the Gael does not differ greatly from that of the other dwellers in our island. This is very generally found to be true: 'Winter comes not till after New Year, nor spring till after St Patrick's Day' (March 17). The following shows the usual distrust of a too early spring, and is very gracefully expressed: 'For every song the mavis sings in February, she'll lament ere spring be over.' Another saying worth quoting is: 'A month from the first ear to the full ear, and a month from the full ear to the withered [ripened] ear.' The following excellent advice to husbandmen shows a remarkable insight into the true principles of agriculture: 'To feed the land before it get hungry, to give it rest before it grow weary, to weed it well before it get dirty—the marks of a good husbandman.' The proverb about 'far-away birds,' and Campbell's line about the enchanting effects of distance, are both paralleled in the saying: 'Blue are the hills that are far from us.' The Gael has also a proverb instinct with the breath of freedom: 'There is no smoke in the lark's house.'

Here are two curious proverbs: 'It would be something for one man, but it's a small thing for two, as Alexander the Proud said about the world.' And again: 'She is as good at spinning as the Greek woman.' The latter seems to allude to Penelope; and both are interesting (supposing they are not quite modern), as showing that the Highlanders had some knowledge of Greek tales.

This is also evidenced by the frequent occurrence of such names as Hector, Æneas, and Alexander. We have never seen any satisfactory explanation of this.

As specimens of the quiet yet keen humour in which these proverbs abound, take the following: 'The cock was very bountiful with the horse's corn;' 'Tis the less for that, the less for that, as the wren said when he sipped a billful out of the sea.' But even as he smiles, the Gael knows that inevitable Fate lies in wait for him; and the consciousness of this is seldom long absent from him. 'One must go where his grave awaits him,' for 'No man can avoid the spot where birth or death is his lot.' And, 'For whom ill is fated, him it strikes.' But in a nobler mood, we have: 'A man's will is his kingdom;' and, 'A bad man makes his own destiny;' for 'Short-lived is all rule but the rule of God.' And to sum up all, let us quote this beautiful and profound saying: 'Not less in God's sight is the end of the day than the beginning.'

The time will come—and under the influence of universal travel and School Boards it is approaching rapidly—when Gaelic will cease to be a spoken language, and will share the fate of its sisters, the Manx and Cornish. Yet it will always have an interest for antiquaries and philologists; and such collections of its proverbial folk-lore as this before us help to save for the coming generations what would otherwise be probably for ever lost.

THE STORY OF INEZ.

'EASY stages each day up the coast-line of California. Slowly over the steep hills which lay in rank like breakers rolling on the shore; down the other side at a helter-skelter gallop; breakfasting in lonely fishermen's huts, with the sweet surf-music coming to us with the sun through the open door and windows, and dining at rude wayside stations and homelike farmhouses. This was our daily programme; a very pleasant one to carry out.

'Yet the balmy breezes, bringing sometimes spicy perfumes from the pine-clad slopes of the coast-range mountains, and again blowing dreamily from the south-west, failed to call to the cheeks of our sister the bloom that had been there. We idolised our sister, and we do yet, and always shall; and we shall always do everything—in or out of our paths—which will aid in the restoration of her health and happiness.

'The cause, you ask?

'We say little of that among ourselves, and we say less outside; but we clench our fists and tap our revolver-handles meaningly when there seems a resemblance in the faces of those we meet occasionally, to a villain who in designedly blasting the heart's hope of our sister, has made us his lifelong enemies. Our ancestors gave us, among other traits—some good, some bad—a vindictiveness of spirit that is as tenacious as life itself. They could not help it; neither can we. They came over with Cortez, and at the close of their

glorious conquering, settled in the Californian peninsula; where are indeed to this day the original estates in the possession of lineal descendants. Yes! a Spanish American can forgive, though it be against the grain; but he can never forget. In this matter we can neither forgive nor forget the rascally adventurer who has cast a black shadow over our peaceful household.

'In the autumn there came to the hacienda a handsome young English naval officer—on sick leave, so he said—to whom with ready hospitality we offered the shelter of our roof.

'Frolicsome, mirthful, and an accomplished musician, he speedily gained entrance to our simple ways and simple hearts, and was treated as one of ourselves. We did not know then how happy we were; we know now by the contrast. He was soon conspicuous in the vintage festivals, treading the luscious, purple grapes in the great tubs, side by side with the girls of the valley (a privilege they denied my brother José and myself), and always the leader in the gay dances that succeeded. Yet we did not grow jealous—we are only jealous of those we mistrust. We boys of the peacefully happy Sonorada valley still basked in the sweet smiles of the señoritas, though we knew that their sweetest smiles and their sweetest words were reserved for the stranger—our friend.

'None of our companions had gained the love of Inez. They dared not speak to her of that, though a score of them had aching hearts and were sinking into chronic melancholy. They would bring in the skins of the grizzly bear and the 'mountain lion' as proofs of their valour, without exciting in her breast even a temporary admiration for themselves or their achievements. She would only say: "What a pity to kill those poor, harmless beasts!" Then the despairing gallant would mount his waiting mustang and rush madly away. She notably differed from her own flesh and blood. Long years ago, there had been a wreck, and we had saved from it a large collection of English books. As soon as she learned to speak and read in your tongue, she commenced poring over these mysterious attractions. They were 'mysterious' to us, because we could not understand why there could be any better amusement than frolicsome horse-back rides over the vine-clad hills and dales of the country around, mirthful dances at the harvest-feast, and rollicking trips in white-winged yachts.

'Roger Ayrton—that was his name—quickly discovered the intimate acquaintance Inez had with the English language and the authors of his motherland, and we were more than ever mystified at the conspicuous concord there was in their views. We soon learned that she was made happy by Roger's presence, and when he spoke of leaving, we endeavoured to dissuade him; for was it not our only object to contribute to her happiness? He was not behind in showing a lively pleasure in being with her; and their chats were of the merriest sort imaginable, when they sat on the wide veranda fronting the bay, looking out on the brown sails of the fishing-boats. Could he have been thinking of her, or of a lady-love far away,

when he sang blithely after leaving her side one night :

O thou moon that shinest,
Argent clear above,
All night long enlighten,
My sweet lady-love !

Might we not induce him to stay with us in the valley, if her happiness depended on it? We owned plenty of fine land, and if he married Inez, we would give him all he needed; besides, her ample dowry. We had no chance to ascertain this, for there came by a special messenger from San Francisco a summons to rejoin his ship immediately; and with a quiet but seemingly sincere farewell, he departed, promising to get an extension of leave and come back at once. And then the light faded out of her eyes, and there was but a sad smile when we spoke of Roger. Months flew quickly, and no tidings came from him whom we now characterised as a base, heartless villain—the thief of a precious affection. On going to 'Frisco, I found his ship had sailed for the China station, and I had to come back to the ranche with the tale. She said little—"Oh, Pedro!" and then after a while: "Can it be that he was only trifling with me?" There was no light left in her eyes then, and there were no smiles. She seemed to sink under the weight of her trouble; brain-fever set in, and her frail spirit battled long for mere life. When convalescence came, after weeks of anxious watching and nursing, we came here in pursuance of our physician's orders; and this then is our reason for apparently idling our time away here.'

Told in a mixture of Spanish and English, which I liberally translate, and in musically passionate tones, accompanied with the fiery gesticulation peculiar to his race, Pedro's tale impressed us considerably. How fondly he would stroke his heavy moustache at the memory of the bright-eyed valley señoritas, and what a cold, deadly glitter in his eyes at the mention of the lieutenant. Though the departure of their ancestors from sunny Spain dated back three or four centuries, these boys gave unmistakable evidence of the source of the hot blood with which their veins were filled.

'Were I an insurance man,' whispered my companion, who had been critically scanning Pedro's lithe, sinewy limbs—'were I an insurance man, I would ask a premium of at least nine-tenths of the whole amount of insurance in assuring that lieutenant's life against casualties;' and I unhesitatingly acquiesced.

Notwithstanding the marks of deep suffering on the sister's face, there was unmistakable evidence of unsullied beauty, and the trio speedily possessed our confidence and sympathy. We, too, were recuperating in the little seaport town.

Several days after this revelation to us, through Pedro, of the origin of her sickness, we were informed that he was to start for the city—San Francisco—and judging from his grim manner the object of the trip, we finally discovered that the lieutenant's ship was expected to arrive within a day or two from her cruise. There was something ominous in his mission, and we found, almost unconsciously, ourselves fretting about it as Pedro went forth with a set determination impressed on his swarthy visage, notwithstanding his sister's feeble remonstrances.

Jerkily pacing the floor of the deserted mess-room; stooping at times to look through the port-holes, eastward over the watery expanse; uttering impatient words and exhibiting various outward signs of discomposure and anxiety—this is the frame of mind possessing Lieutenant Ayrton as we examine his well-made form and rather intellectual countenance. His brother-officers having finished dinner, have gone on deck, and he has driven out the cabin-boy, who would clear away the debris, so as to get a chance to have a bit of soliloquy. He has been triumphantly successful in his endeavours, and save the appearance around the door's edge, at very long intervals, of the dish-wiping youngster's head, he is not reminded of the existence, by sight, anyway, of any of his fellow-mortals.

'I should have sent my letter to Inez by a special messenger, and not trusted to the dilatory and unsafe mail,' he says.

'What if it has never reached her! Still, it must have. To-morrow we reach 'Frisco, and the very next stage will carry me to Sonorada.'

Again he breaks out: 'Confound it! Why did we not cruise near some port from whence I might have sent information of my whereabouts? Always that odious junk-chasing, with no loot, no prize-money—nothing. One thing I have determined to do; it is this: Inez will marry me, and I'll settle in the valley and live the contented life of a ranchero. I can buy a small ranche, and we will be happy—so happy. After a while we shall travel about. There can be good achieved there in many ways, and it is far better to spend my life doing it than making miserable mathematical calculations and studying the laws of winds and tides.' The sound of the bell beating the hour summons his wandering mind to obvious realities. 'Two bells, sir!' calls out a gruff, hearty voice, adding, 'land in sight!' and Lieutenant Ayrton slowly mounts the staircase and surveys the dim blue outline of the distant shore.

How unconscious he is of the peculiar reception awaiting him; where he anticipates kisses and the warm handshaking of friends, he will find the sadness of a broken heart and the threatening muzzles of revolvers in the grasp of angry men. And now he is walking the upper-deck of the beautiful ship, and he is looking up at the stars, thinking of the pleasant events of the morrow. And he is revelling in the pure beauty of the stars; and can we doubt that he thinks them the counterpart of the light that has shone and will shine in her eyes when, clasping her in his loving arms, he kisses her anew?

A schooner dashing southward over boisterous, white-capped waves; all her available canvas set, and still they are constantly hoisting sail after sail, plainly of improvised and novel patterns, until the masts bend with their burdens. A bright sun overhead, a stiff breeze; still they are not content. Why is it? Why is it also that the skipper is chuckling over several broad gold pieces he has had lately added to his not over-profuse stock—earnests of more to follow? What can be the object in racing so determinedly to the south?

There is no cargo, and there are but three passengers—myself, José, and my 'companion.'

Let me explain. Only this morning, to our amazement, José told us Inez had received a letter from her recreant lover, and we, as their only friends in the village, were invited to be present at the deliberations. The missive had been written in San Francisco, dated 1st October, bore the city and Sonorada post-marks, and was accompanied by a note from the valley postmaster, saying that it had been found in his office that day, buried in some rubbish underneath a counter. We did not read the other letter, but we knew from the changed countenances of brother and sister, that the cloud had lifted, that there surely had been a revelation. All the blame that had been attached to the lieutenant was to be taken back, and an entire exculpation given him. In her face might be read the presence of anxious hope—a hope misty with dreadful apprehensions. Had not her brother Pedro gone to punish the seeming destroyer of her happiness? And might not the revenge be accomplished before the present truth was communicated? We decided speedily the course to pursue, chartered a swift-sailing schooner, and with a favouring breeze were being rapidly carried on our errand.

With the close of the long day we descried the familiar landmarks denoting our nearness to the Golden Gate, and as the last token of the sun's glory reflected from the clouds away out over the sea faded, we made the famous portal—through which have passed the stoutest hearts eager with expectation—entered this time on a merciful message, to prevent, if possible, the spilling of innocent blood. Rounding slowly to the entrance, our keen-eyed captain, after examining the shipping in the harbour, suddenly called us to him, saying: 'The Britisher has arrived!'

Sure enough too; and the huge vessel presented a defiant, somewhat menacing appearance as the schooner glided past to the anchorage. We were gravely apprehensive now; we became still more alarmed and excited when the customs-officer said a boat had just landed with Lieutenant Ayrton and luggage—but thirty minutes since! 'Did the officer know where the lieutenant intended to stop?' 'Yes; they had said the B— Hotel.'

How we rushed through the streets to that hotel; how we collared Pedro as he stood with cocked revolver levelled at the lieutenant, and threw up his arm; how the shot tore harmlessly through the frescoed ceiling; and how happy we four were! The balance of the night has passed into the history of our lives, where it shall always be vividly present. It was a fortunate accomplishment of our design, favoured by luck.

To finish the tale of the suffering which came about through the detention of a mere letter. We sailed merrily northwards under sunny skies the next day, and the happiness on *her* face when folded in her lover's arms, did my old heart good.

The lieutenant, giving up 'rudder-wrestling,' *did* settle down to valley life; and hearing from him some few weeks since, I was rejoiced to find him in possession of two beautiful youngsters and the loving help of a true, womanly heart. He represents the Sonorada district in the legislature, and is doing much to regenerate the valley; his active and forcible

mind acting beneficially on the dozy, indolent neighbouring rancheros; and I hear a whisper in the press that the governorship of the State is proposed in his behalf.

THE CHRISTMAS LETTER MISSION.

AMONGST the numerous excellent charities of which this country has just reason to boast, there is none, probably, whose work is more extensive than that operating under the title of the Christmas Letter Mission, notwithstanding the fact that it is so quietly and unobtrusively carried on that possibly many of the readers of this *Journal* may be unaware of its existence. The primary object of this institution is to afford to each of the patients in the numerous hospitals, infirmaries, and the like, which abound throughout the land the pleasure of receiving on Christmas morning a suitable letter, conveying the message of the season, together with a bright Christmas card. That such a surprise, small though the gift may seem, and the sense of being remembered at this cheerful season, should constitute for the often sad and always suffering patients a greeting which it is well worth some pains and thought to bestow, cannot for a moment be doubted; and as it is extremely desirable that the fact of such work being carried on in our midst should be known as widely as possible, we venture to offer a few remarks upon the subject.

Like many other great and successful undertakings, the Christmas Letter Mission sprang from the very smallest beginnings, the idea itself originating in the sick-chamber of a lady at Brighton. Surrounded by and experiencing the many friendly tokens and ministries which love prompts at such a time, the mind of this kind-hearted lady seems to have wandered to the Homes and Hospitals where fellow-creatures also lay ill and suffering, but without the comfort or solace of these little tokens of affection that she herself enjoyed. When in health, she was accustomed to visit such institutions in her own locality, hence these reflections were probably more strongly forced upon her mind; and it was during a night of wakefulness that the bright idea of a *letter to each* suddenly occurred to her. This was the germ which has since developed into a gigantic Mission, distributing over *three hundred thousand* letters of friendship and good cheer on Christmas morning, not taking into account the numerous missives that are sent to the colonies and to foreign countries.

No time was lost in maturing and carrying out the idea; and—we are told—one wet and stormy night, just eleven years ago, a little company was gathered round the dining-room table of a Brighton clergyman—the late well-known Rev. Edward B. Elliott of St Mark's—to help in the first and experimental trial of the plan, each member being bound to secrecy. Some hundreds of Christmas cards, printed letters, and envelopes, were laid in piles on the table, and the workers, five in number, methodically set themselves to their task: No. 1 folding; No. 2 placing in envelopes; No. 3 inclosing cards; No. 4 sealing; and No. 5 tying up in parcels of twenty. These letters were destined for the

Sussex County and other Hospitals located in the neighbourhood of Brighton; and the distribution took place on the evening of the 23d December 1871, which was the working Christmas eve that year, as the 25th fell on a Monday. The packets of letters were handed over to the head-nurses of the respective wards in the hospitals visited, after the permission of the chaplains had been duly obtained, with directions to leave one on the pillow of each patient, so that it might there be found on awaking on Christmas morning. The nurses, without exception, entered with interest and pleasure into the plan; and great were the surprise and delight, it is recorded, when Christmas day arrived and each patient found waiting on the pillow a letter with the superscription, 'A Christmas Letter for you.'

This first attempt proved highly successful, and spread as it was carried on from year to year. With the increase of its dimensions, however, the Mission naturally began to feel the want of a central organisation; while the secret method of its operations produced this undesirable result, namely, that while numerous hospitals and infirmaries were over-supplied with letters and cards, many others both in town and country remained uncared for. The importance and indeed necessity of a properly regulated system at length, in 1877, so forced themselves upon the minds of the main workers, that it was actually attempted in the Christmas season of that year, and was attended with great success. Since that date, a complete system has been established throughout the country for carrying on the Christmas Letter Mission work, the staff consisting of one chief Central Secretary, resident in London, for the whole country; and a Central Secretary each for Scotland, Ireland, North Wales, South Wales, Australia, and the Continent of Europe; while every county in England and Wales, each London Postal District, and, as a general rule, each of the large towns, has an effective Secretary of its own. Each of these officials has specified duties to perform, so that the whole system is carried on now with clock-work regularity; for, as we are told, it is absolutely necessary that an organisation of this character should be administered with almost military precision. Every Secretary has a roll of regular workers; and from each county, a return, showing the state of the work, has annually to be forwarded to the chief Central Secretary, who is thereby enabled to ascertain at a glance the particulars of every individual distribution in the kingdom. Schedules, printed and ruled for the purpose, so as to show the name of each hospital and infirmary at which letters were distributed, the name and address of the distributor, and the number of patients to whom the letters were delivered, divided into adults, children, nurses, and servants, with a column for such remarks as may appear necessary, are sent to each town where there is a Secretary, to be filled up and returned to the county Secretary, who is thus enabled to compile the return required at headquarters.

Such is the machinery by means of which the three hundred thousand friendly letters and cards of Christmas greeting are now annually distributed; and—although of course on a smaller scale—it is not at all unlike the vast

system required for the decennial numbering of the people.

One of the first duties of each worker in the Christmas Letter Mission is to obtain the full consent of the chaplain or other authorities of the institution visited; and it is this rule—to which every worker is pledged—that forms the backbone of strength in the work. The result has been the warm and generous support of chaplains and 'Boards' throughout the kingdom.

So successful is the work of the Christmas Letter Mission at the present time, that although hospitals and infirmaries were originally alone contemplated as the objects of this charity, urgent requests are now received from all parts for suitable letters not only for other institutions, such as jails, refuges, workhouses, schools, and such like, but also for individual distribution. Not only, too, is the Christmas Letter Mission's work so extensive in this country, but so far distant as in India, large numbers of these letters and cards, which have been forwarded from here, are also issued; while others, translated into Swedish, German, French, and Italian, are distributed in their respective countries.

In thus indicating the main features of this admirable Mission, it is only right to state that the object underlying the work is not mere temporary amusement, nor is the motive solely to create a Christmas surprise. The work was begun with higher motives, and with such it is still carried on; and, as we may therefore suppose, the great *raison d'être* of the Mission is, in the first place, to do an act of kindness; and in the second, to awaken in the recipients some tender thoughts of the past, or some brighter hopes for the future, on a day which is intended to be one of the happiest in the year. The letters themselves, from what we have seen, are written in a bright and cheerful spirit, each being illustrated with an engraving; and many of them are in verse, especially those for children, embodying in the form of a slight but interesting story the truths desired to be inculcated.

If, as regards the children, the distribution of toys at this season could be incorporated with the present work of the Mission, a vast additional amount of happiness would be created amongst thousands of little ones lying sick and ill in the infirmaries and hospitals. No one truly fond of children can fail to know the appreciation in which toys are held by them at all times, but more particularly when recovering from illness. To a poor child on the bed of illness, even one discarded toy of a richer child would afford a delight not to be conceived or realised by any one whose childhood has been left in the long past. With the machinery possessed by the Christmas Letter Mission, what infinite happiness and amusement might be carried into the hearts of such little ones by the collection and distribution of the old and thrown-away toys of the more fortunately circumstanced children! Nor need the adults be forgotten. Old books of light, entertaining, and healthy literature, periodicals, illustrated papers, and indeed any slight publication likely to interest and benefit the reader, could also through this means be distributed, to lighten and relieve the weary hours of sickness. In this latter field, it is fair to mention that much has already been

done in London by Dr Dawson W. Turner; but although the work he has thus accomplished is really wonderful, it is little to what might be performed through the agency of so powerful and extensive an organisation as that of which we are writing.

Before drawing this paper to a close, there is one important point which must certainly not be omitted, and it is contained in the question: 'Is the work of the Christmas Letter Mission appreciated by those for whom it is undertaken?' If the present and past success, the magnitude and extent of the work, are not a sufficient answer, let it then be given straight from the lips of those most concerned. The Reports of the various Secretaries and workers connected with this vast benevolent system are invariably accompanied with remarks attesting the appreciation on the part of the recipients of the letters and Christmas cards distributed; while numbers are supplemented by actual instances and illustrations of these acknowledgments, and from these we cannot do better than select one or two examples. 'We found,' says one Report, 'one woman very ill and poor and helpless, yet her face plainly told of a peace and joy not of this world; and on my inquiring as to her hopes beyond this life, she said: "Well, ma'am, I can't tell you *plain*, but them's my sentiments;" and she handed us a Christmas Letter! "It is them blessed words has done me so much good. Why, when I was all alone in the B— Workhouse Infirmary, feeling as if no one knew or cared for me, I found this letter on my pillow. I started! It might be to tell me my husband had died in the Asylum, poor fellow. But no! There was just this letter and a beautiful card; and I began to read it. And little by little the others woke up, and there *was* such a to-do! "You got a letter, Mrs H—; I wish I had one!" And then one and another found a letter and a card; and they were so pleased; and it seemed a message from heaven—it did. And I thought the one as wrote it must have knowed what it was to feel lonely, and ill, and tired. I do wish the lady as sent them could know how pleased we all were!"

In another case, the old people, not content with sending their thanks through the matron of the infirmary where they were patients, selected from among themselves a scribe, and requested the inclosure of an epistle to the Branch Secretary. The letter, which is a curiosity in itself, ran thus:

IN FERMEY.

DEAR MADDAM i have taken the liberty of righting to you for your crismass presint for wee are 8 of us in our in fermery and wee are all hartley thankfull . . . for wee are all old peepell from 66 up to 95 years of age plase to excuse me for my bad righting. From yours truly
T— G—.

The matron of a city hospital affords the following testimony: 'In my experience, Christmas Day in hospital usually commences with a certain amount of sadness, almost all wishing they were at home with their friends; and their conversation amongst themselves is usually how they enjoyed last Christmas Day, ending in, with rather a sad voice: "But I was well then!" This year was

certainly not so. They were each talking of their cards, and looking bright and happy; and as several of them remarked: "It is so kind of the people outside to think of us!"' The chaplain of one of our largest London hospitals also remarks in the course of a long letter on the subject: 'I am glad to be able to say that all—patients, nurses and servants—thoroughly appreciated them' (the letters and cards).

The testimony of the appreciation of the Christmas letters thus distributed is everywhere the same. It may be of interest to add that in Ireland, the success of the Christmas Letter Mission work is most encouraging; and chaplains, lady-superintendents, and matrons titer with one accord acknowledge the glad surprise given to their patients by the receipt of the Christmas missives, reminding them, as it does, of creature-sympathy. Last season, no fewer than five thousand four hundred and fifty letters were issued in Ireland, and the circulation is expected to be greatly extended this year.

After reading the foregoing, many of our readers may be disposed to take a friendly and active interest in the Christmas Letter Mission. It is almost unnecessary to say that so vast a system cannot be carried on without money, and we understand that funds are now very much needed. Those, therefore, who would help the Mission in this respect should send their subscriptions to Miss Steele Elliott, the Treasurer and General Organiser, 66 Mildmay Park, London, N. Those, however, who desire to engage personally and actively in the good work, are requested to address their communications or inquiries on the subject to Miss Strong, the Central Secretary, 67 Ladbroke Grove, Notting Hill, London, W.

IMPROMPTUS.

THE impromptu is a form of pleasantry in which the wits and humorists of all ages have more or less indulged. The Greeks and Romans were adepts in this species of humour, and they sometimes enlivened their domestic entertainments by contests in impromptu and other verse-making. On these occasions trifling prizes were given to the most skilful, and many notices of these wit-combats have been handed down to us in classical literature. Impromptu verse-making has also formed one of the principal amusements of certain modern literary societies. One of these associations, to which the well-known writer, poet, and Oriental scholar, William Tennant, belonged, existed at one time at Anstruther, in Scotland, under the title of the 'Museum Society.' At its ordinary meetings, rhymes were given to every member present, which he was required to fill up immediately, on the spur of the moment. On one occasion 'pen, scuffle, men, ruffle,' were given. In a few minutes, lines were produced by the whole party, one set being as follows:

One would suppose a silly pen
A shabby weapon in a scuffle;
But yet the pen of critic men,
A very hero's soul would ruffle.

On another occasion the very uncouth rhymes,

'bubble, jig, stubble, whirligig,' were utilised thus :

What is life?—A smoke, a bubble ;
In this gay world, a foolish jig ;
A joyless field of barren stubble ;
And what is man?—A whirligig.

Queen Elizabeth has been credited with an impromptu which, if not the composition of Her Majesty, smacks very much of that bluntness which she is said to have inherited from her father. It is stated that when the Queen was passing through Coventry on one occasion, the Mayor and Corporation persistently stood in the way to present a loyal address, which ran somewhat in this fashion :

We men of Coventree
Are very glad to see
Your gracious Majestie.
Good Lord, how fair ye be !

To which Her Majesty at once replied :

Her gracious Majestie
Is very wroth to see
Ye men of Coventree.
Good Lord, what fools ye be !

Political events have, of course, given rise to innumerable impromptus. Thus, in 1765, one Williams, a bookseller, published the celebrated *North Briton* of Wilkes, and for so doing was condemned to stand in the pillory in Palace Yard for one hour on the first of March. A collection of two hundred pounds was made for Williams on the spot, and one of the spectators wrote on the pillory-scaffold the impromptu :

Martyrs of old for truth thus bravely stood,
Laid down their lives, and shed their dearest blood ;
No scandal then to suffer in her cause,
And nobly stem the rigour of the laws :
Pulpit and desk may equally go down,
A pillory's now more sacred than a [crown].

The notorious election for Westminster of 1784 gave rise to a number of clever impromptus. The return of Charles Fox on this occasion was due in a great measure to the exertions of the beautiful Duchess of Devonshire, who with her sister, Lady Duncannon, visited the humblest of the electors. On one occasion the Duchess is said to have given a butcher a kiss in order to gain his vote, which drew forth the following :

Condemn not, prudes, fair Devon's plan,
In giving Steel a kiss ;
In such a cause, for such a man
She could not do amiss.

This incident was caricatured in innumerable pictures, and one individual wrote :

Arrayed in matchless beauty, Devon's fair
In Fox's favour takes a zealous part ;
But oh ! where'er the pilferer comes, beware,
She supplicates a vote, and steals a heart !

The business of the Senate has naturally given rise in many instances to amusing impromptus. Thus Lord Sandon replying in the House of Commons to a question, announced that forty-six cattle had died in Lincolnshire of drinking water. An ardent teetotaler—a member of the House, distinguished equally for his humour and his

zeal for temperance legislation—promptly penned the following :

When forty-six cattle have perished by water,
To alter our system it's time to begin ;
Let's feed them in future on beer or on porter,
On rum, or on brandy, on whisky or gin.
Like beasts let them drink without stoppage or pause,
Refilling their buckets again and again :
Till at last we are able to say with just cause—
'These beasts are as wise and as worthy as men.'
Then hail to the system promoted by Sandon !
Henceforward our life will more pleasantly glide,
When our flocks and our herds shall all water abandon,
And our cattle lie peacefully drunk at our side.

This species of wit is not, however, confined to the British Senate ; for at a sitting of the American House of Representatives, not many years since, one of the members—Mr Horr—delivered himself of the following impromptu epitaph on Mr S. Cox, another member :

Beneath this slab lies the great Sam Cox,
Who was wise as an owl and brave as an ox :
Think it not strange his turning to dust,
For he swelled and he swelled till he finally bust.
Just where he has gone, or just how he fares,
Nobody knows and nobody cares ;
But wherever he is, be he angel or elf,
Be sure, dear reader, he's puffing himself.

Some very witty impromptus have at times been made by the limbs of the law. Joseph Jekyll, for instance, the greatest legal wit of the reign of George III., bored with the long-winded speech of a prosy serjeant, wrote on a slip of paper, which was in due course passed along the barristers' benches of the court where he sat :

The serjeants are a grateful race,
Their dress and language show it ;
Their purple garments come from Tyre,
Their arguments go to it.

On another occasion, when a well-known counsel was doing his best in cross-examination to get an acknowledgment from an elderly unmarried lady that certain money in dispute had been tendered, Jekyll threw him the couplet :

Garrow, forbear ; that tough old jade
Will never prove a tender maid.

So again, when Lord Chancellor Eldon and Sir Arthur Pigott each stood out in court for his own pronunciation of the word *lien*—Eldon pronouncing it like *lion*, and Pigott like *lean*—Jekyll, alluding to the parsimonious arrangements of the Chancellor's kitchen, perpetrated the following impromptu :

Sir Arthur, Sir Arthur, why, what do you mean,
By saying the Chancellor's *lion* is *lean* ?
D'ye think that his kitchen's so bad as all that,
That nothing within it can ever get fat ?

Sir George Rose, another great lawyer, was noted for the excellence of his witticisms in court and elsewhere. The following double impromptu took place at a dinner-table between Sir George and James Smith, one of the authors of the celebrated *Rejected Addresses*, in allusion to Craven Street, Strand, where Smith resided. Smith wrote :

At the top of my street the attorneys abound,
And down at the bottom the barges are found.
Fly, Honesty, fly, to some safer retreat ;
For there's craft in the river, and craft in the street.

Sir George replied :

Why should Honesty fly to some safer retreat,
From attorneys and barges, od rot 'em?
For the lawyers are just at the top of the street,
And the barges are just at the bottom.

Lord Thomas Erskine also was celebrated in his day for his wit, and was the author of many capital impromptus. An amusing specimen was that made on his hearing that a certain house in Red Lion Square, once occupied by a distinguished counsel, had been taken by an ironsmith :

This house, where once a lawyer dwelt,
Is now a smith's—Alas !
How rapidly the Iron Age
Succeeds the Age of Brass.

The lawyers, however, have not always had the best of the argument, for on a certain occasion an attorney thinking to make a joke at the expense of a journalist, sent him the following lines :

I slept in an editor's bed last night,
When no other chanced to be nigh ;
How I thought, as I tumbled the editor's bed,
How easily editors lie !

The journalist was equal to the occasion, and immediately penning the following lines, sent them to the lawyer :

If the lawyer slept in the editor's bed,
When no lawyer chanced to be nigh ;
And though he has written, and naively said,
How easily editors lie ;
He must then admit, as he lay on that bed
And slept to his heart's desire,
Whate'er he may say of the editor's bed,
'Twas the lawyer himself was the liar.

Our literary celebrities have contributed their full share to this amusing kind of pleasantry, and even the sedate Dr Johnson, in his lighter moments, was the author of a number of these poetical trifles, one of the best being that written to Mrs Thrale on that lady's completing her thirty-fifth year :

Off in danger, yet alive,
We are come to thirty-five ;
Long may better years arrive,
Better years than thirty-five ;
Could philosophers contrive
Life to stop at thirty-five,
Time his hours should never drive
O'er the bounds of thirty-five.
High to soar, and deep to drive,
Nature gives at thirty-five.
Ladies, stock and tend your hive,
Trifle not at thirty-five ;
For, howe'er we boast and strive,
Life declines from thirty-five :
He that ever hopes to thrive,
Must begin by thirty-five ;
And all who wisely wish to wive
Must look on Thrale at thirty-five.

Mr Clarke, in his *Autobiographical Recollections of the Medical Profession*, tells a pleasant anecdote of Cowper in which an impromptu rendering of a verse of *John Gilpin* forms the point of the story. Mr Wilson, a hairdresser, was in the habit of resorting to Cowper's house to shave the poet, who on these occasions was generally silent. One day Wilson was shaving away in silence, when it was broken by the following circumstance. Cowper was that day to dine with Lady Austen at Clifton. Wilson had left home to be punctual

to his engagement, and had told his man to bring Mr Cowper's best wig after him—the wig having been specially dressed for the occasion. When Wilson had finished, Cowper suddenly exclaimed : 'Oh, Mr Wilson, my wig !' Wilson, who was a wit, immediately quoted in answer, from the poet's well-known poem :

I came before your wig was done ;
But if I well forebode,
It certainly will soon be here,
It is upon the road.

'Very well applied, indeed, Mr Wilson,' quoth the poet.

Byron has left us several impromptus, one of the most amusing being written in the travellers' book at Orchomenus, in Greece, in reply to the following lines, written in the book by another traveller :

Fair Albion, smiling, sees her son depart,
To trace the birth and nursery of art :
Noble his object, glorious is his aim ;
He comes to Athens, and he writes his name.

Beneath this verse Byron wrote :

The modest bard, like many a bard unknown,
Rhymes on our names, but wisely hides his own ;
But yet, whoe'er he be, to say no worse,
His name would bring more credit than his verse.

Here is a story of Thackeray and Albert Smith. The latter once wrote in the album of a young lady who was sojourning in Switzerland the following feeble impromptu :

Mont Blanc is the monarch of mountains—
They crowned him long ago ;
But *who* they got to put it on,
Nobody seems to know.

Thackeray, being asked by the same lady to contribute to her collection, examined the contents of her book, and coming across the above lines of Albert Smith's, at once penned the following :

I know that Albert wrote in hurry ;
To criticise I scarce presume ;
But yet methinks that Lindley Murray,
Instead of *who*, had written *whom*.

Theodore Hook, the wittiest man of his day, was a most prolific impromptuist. No matter what the occasion or the subject, Hook could improvise verses—and witty ones too—upon it. On one occasion as Hook and Mathews the actor were rowing up the river, they saw a notice-board on a lawn forbidding any one to land there. Hook at once invented a scheme. He and Mathews landed, with fishing-rods and lines. Hook acted the land-surveyor, Mathews the clerk. They began to measure with the fishing-rods as measuring and levelling staffs, and the fishing-lines as yard and rod measures. Presently the owner appeared, and began to soundly rate the interlopers ; but Hook quietly stated that a canal was to be cut directly across the lawn, and that measurements were necessary for the work. The owner of the lawn ultimately asked them in to talk the matter over ; a good dinner and capital wines were ready ; over which the gentleman tried to persuade the surveyor that another line for the canal might be easily obtained without touching his lawn. Hook at length revealed the hoax, and narrated the

whole transaction in impromptu verse, the narrative winding up with :

And we greatly approve of your fare ;
Your cellar's as prime as your cook ;
And this clerk here is Mathews the player ;
And my name, sir, is—Theodore Hook.

On another occasion, Hook was singing an extempore comic song at the house of a friend, when the servant entered and said : ' Please, sir, here's Mr Winter, the collector of taxes.' Hook immediately sung :

Here comes Mr Winter, collector of taxes ;
I'd advise you to pay him whatever he axes.
Excuses won't do ; he stands no sort of flummery ;
Though Winter's his name, his process is summary.

Many other clever impromptus might be cited, but that which has just been given reminds us that we must not further tax the patience of our readers.

CHLORAL.

THE age we live in is remarkable for the progress that has been made in scientific discovery, and in this progress medical research has benefited equally with other branches of science. Even in the small way of household remedies, we are thankful for an apparent reform. The bitter potions of senna and rhubarb are no longer common, and now we have doses for childhood served up in the shape of elegant and toothsome comfits. In the higher walks of medical reform, scientific research has done much to alleviate human suffering ; increased attention has been paid to the proper action of medicines, and this to a great extent has been due to exact physiological research.

One example of the results which have been derived from physiological research is to be found in the discovery of the hypnotic or soporific properties of chloral by Dr Liebreich of Berlin—a discovery entirely due to a very simple conjunction of chemical and physiological facts, and a series of experiments based thereon. The simplicity of the discovery will be clearly seen when we have explained what chloral is, and some of its relations to other well-known substances. The word chloral is a combination of two words, chlorine and alcohol, formed by combining the first syllable of each. It is prepared by the action of dry chlorine gas upon alcohol ; and the liquid chloral which is the product of the action is distilled into a large flask constructed to receive it. The product thus obtained is not used in medicine ; but when it is mixed with a certain proportion of water, it forms a crystalline compound called hydrate of chloral, and is the article commonly known as ' chloral.' When hydrate of chloral is heated with an alkali, chloroform is produced ; and it was the knowledge of this fact which led Dr Liebreich to suppose that if chloral were introduced into the circulation of animals, the alkaline nature of the blood would cause slow evolution of chloroform from the chloral, and consequently sleep would be produced.

After Dr Liebreich had carefully noted the various effects produced by his new remedy upon the lower animals, he ventured to take a dose himself, which he did at different times, both subcutaneously and in a draught. By both methods he found the result to be the same—a deep dreamless sleep, lasting from six to ten hours, according to the dose taken.

The announcement of Dr Liebreich's discovery was warmly received by the medical profession, who regarded it almost as a fulfilment of the prediction which was made many years ago by Sir James Y. Simpson, that ' a drug would yet be found which would possess all the virtues of opium without its baneful effects.' Such a drug, Liebreich's chloral seemed to be ; and if success were to be judged by the quantity used, Dr Liebreich must have had no cause to complain. It is a remarkable fact that such drugs as chloral invariably become popular outside the medical profession. The reason of this is not far to seek, when we think of the number of persons who suffer from insomnia, and to whom opium possesses too many apparent horrors. One would scarcely grudge the wearied brain anything which will bring it rest, for is not sleep the sovereign balm for all ills ? But, unhappily, the use of medicines that induce sleep is attended with the greatest risk of abuse, for the wearied frame and the conscience-stricken or troubled mind drive their unhappy possessors to larger and larger doses of their potent soother. Such, too, is the case with chloral. There are records of many fatal cases from its use, some of which have been accidental—that is to say, in which an ordinary dose produced death ; but in the great majority of deaths, large and poisonous doses have been taken.

Chloral has a direct action upon the heart and the brain, so that when either of these organs is in an abnormal condition, the dangers to be apprehended from its use are not a few. Its action differs very much from that of opium, for the victims of the latter seldom die from the immediate influence of the drug, but rather from some organic disease brought on by its use. Now, chloral accumulates in the system until such a quantity is present as will stop all organic functions ; but death in these cases generally results from an interference with the heart's action, or from a sort of suspension of the nervous stimuli—the nature of the death thus being not unlike that of chronic alcoholism.

Many chloral-drinkers have been dipsomaniacs at one time or other, and have drifted from the use of alcohol to the chloral bottle, or have moderated their consumption of alcohol by the conjunction of chloral. Although chloral-drinking is not so apparent as dram-drinking, yet it has even a greater power over its victims ; and as its immediate effects are not so degrading as those of alcohol, they imagine that it is not so ruinous as the latter ; but it is the result of an insatiable desire, and as such, it becomes an infatuating and degrading vice. The consumption of the drug has, we are glad to note, greatly decreased during the past few years, for a knowledge of the evils of its indiscriminate use has been acquired, and a proper place in therapeutics has been assigned to it.

We hope we have said enough to show the

evil of the habit of chloral-drinking, and that it is far better to try Nature's own remedies for sleeplessness, than to resort to such dangerous remedies as those we have been considering. Sleep-inducing medicines are for the pain-troubled patient under medical treatment, not for the man or woman who is able to go about his or her daily round of duties.

A BIBLIOGRAPHICAL CURIOSITY.

IN the course of our experience we have seen many curiosities of literature, but none that could rival in uniqueness and originality one which was printed in Paris and entitled 'The new Guide of the Conversation in Portuguese and English,' by Pedro Carolino. An author of an educational work should beyond all others be thoroughly acquainted with his subject, but the wording of the title will no doubt be sufficient to give an idea of the merits of the book. The true aims and pretensions of the work can, however, only be learned from the preface, which runs as follows: 'A choice of familiar dialogues, clean of gallicisms, and despoiled phrases, it was missing yet to studious portuguese and brazilian Youth; and also to persons of other nations, that wish to know the Portuguese language. We sought all we may do, to correct that want, composing and divising the present little work in two parts. The first includes a greatest vocabulary proper names by alphabetical order; and the second forty-three Dialogues adapted to the usual precisions of the life. For that reason we did put, with a scrupulous exactness, a *great variety own expressions* to english and portuguese idioms; without to attach us selves (as make some others) almost at a literal translation; translation what only will be for to accustom the portuguese pupils, or foreign, to *speak very bad* any of the mentioned idioms.

'We were increasing this second edition with a phraseology, in the first part, and some familiar letters, anecdotes, *idiotisms*, proverbs, and to second a coin's index.

'The Works which we were conferring for this labour, fond use us for nothing; but those what were publishing to Portugal, or out, they were almost all composed for some foreign, or for some national little acquainted in the spirit of both languages. It was resulting from that carelessness to rest these Works fill of imperfections, and anomalies of style: in spite of the infinite typographical faults which sometimes invert the sense of the periods. It increase not to contain any of those Works the figured pronunciation of the english words, nor the prosodical accent in the portuguese; indispensable object whom wish to speak the english and portuguese languages correctly.

'We expect then, who the little book (for the care what we wrote him, and for her typographical correction) that may be worth the acceptance of the studious persons, and especially of the Youth, at which we dedicate him particularly.'

Notwithstanding the great care with which the author wrote the work, we are forced to the conclusion that it is not quite free from 'despoiled phrases.' The author candidly states that he has

introduced into his work a great variety of his own expressions, and it may not be out of place to quote a few. Thus, in the English dialogues we find such expressions as: 'This coat go to (fits) you,' 'It is a blunt man,' 'She do not tell me nothing,' 'There is it two years what my father is dead,' 'It must never to laugh of the unhappies.' After this there is hope for all, even the veriest tyros in literature, more especially when they are assured that the work from which the foregoing phrases are extracted, has gone through two editions!

Fact, we are told, is stranger than fiction; and for the future it should always be remembered when reading humorous specimens of pigeon-English, that however exaggerated these may appear, they have been excelled in a seriously written work.

NOVEMBER.

SCARCE one brief sun-ray gilds the sombre gloom
That veils the mountains; the bright summer-blue
Is but a memory; and gray and dun
The cheerless landscape, wrapped in watery mist,
Foretells the advent of grim Winter's reign!

Fast wanes the Autumn! Thick the showering leaves
Whirl brown and russet o'er the wind-swept path
In eddying circles; and the fitful gusts
Bend to their will, with a fierce wrathful wail,
The gaunt black fir-tops; all the heather-lands,
Their purple glories gone, lie sere and bare,
Scarce yielding scanty shelter in their range
To the crouched shivering grouse-troop.

Here and there,
A lingering daisy stars the homestead field
With speck of white; and in the garden-beds,
In bright array of crimson and of gold,
Gleam the chrysanthemums: all else shows drear,
And gray, and colourless.

But soon shall fall,
On all around, the pure and spotless snow,
To shroud the buried beauties Nature wraps
Deep in their Winter sleep, till Spring again,
With her bright train of buds and blossoms fair,
Green opening leaves, and choir of tuneful birds,
Warm sunny days, balm-scented dewy nights,
Shall smiling come, and with her magic touch
Make glad with Life and Beauty all the Earth!

A. H. B.

The Conductors of CHAMBERS'S JOURNAL beg to direct the attention of CONTRIBUTORS to the following notice:

1st. All communications should be addressed to the 'Editor, 339 High Street, Edinburgh.'

2d. To insure return in case of ineligibility, postage-stamps should accompany every manuscript.

3d. MANUSCRIPTS should bear the author's full *Christian* name, surname, and address, legibly written; and should be written on white (not blue) paper, and on one side of the leaf only.

4th. Poetical offerings should invariably be accompanied by a stamped and directed envelope.

Unless Contributors comply with the above rules, the Editor cannot undertake to return ineligible papers.

Printed and Published by W. & R. CHAMBERS, 47 Paternoster Row, LONDON, and 339 High Street, EDINBURGH.

PRICE 1½d.

THE GREAT COMET OF 1882.

BY PROFESSOR PIAZZI SMYTH, ASTRONOMER-ROYAL
FOR SCOTLAND.

JUST as the greatest geniuses are those who appear from out the mass of the people, no one knows how or why—and the greatest poets, say Shakespeare and Burns, come of rustic nurture, rather than of university training—so is it of comets.

Comets indeed are now looked for, and most perseveringly as well as scientifically searched for, all over the heavens every night of the year by most able astronomers in various countries, in the southern as well as the northern hemisphere of the world, in observatories armed with the most powerful telescopes of modern times; and the learned men therein do discover by their patient labours very many comets. Not less perhaps than six or seven every year. And the exact position of these among the stars is telegraphed as soon as found from one of those comet-seeking observatories to another, so that in a few days, spite of clouds in this or that locality, sufficient observations are soon procured to allow of the mathematical computers ascertaining the shape of the 'orbit,' or path round the sun, which each comet is performing, together with the peculiar angular position of such orbit in space, and the exact date of the wanderer therein coming to its point of perihelion, or nearest approach to the sun; and that is usually the end of it all. For nearly every one of *those* comets is faint and small to an almost inconceivable degree; a mere pellet of barely luminous vapour in the largest telescope; about which only a few of the learned of mankind can pretend to feel any interest, and which a very small number even of them have seen with their own eyes.

But when a really great comet appears, with a brilliant head outshining every star, and a lengthy tail stretching half across the sky, alarming and exciting the nations the whole world round, it is almost always a sudden appearance, as unexpected by the learned as by the peasant, and

usually first seen by one of the latter class with the naked eye, and by pure accident, long before the learned men of the observatory equatorials have brought their optic tubes to bear on the stranger.

Thus there are in the heavens under the designation of one and the same short word, comets *and* comets indeed. Some so exceedingly faint, that only the most powerful object-glasses or reflectors will just show a something in the field on a very dark night; others so brilliant, that they may be seen by every one near the sun at noonday. Some so absolutely small, that without being very far off—amongst the planetary spaces—they subtend angles of only a few seconds, or less than the unassisted eye can appreciate; others again so large that for mere length in millions of miles they dwindle even our mighty sun into insignificance, and are seen from the earth under such enormous angles, even sixty and ninety degrees, that they render the telescope comparatively useless, and enable a better idea of the whole to be obtained by the simple unassisted eye.

Now the comet of which we have to speak in this article, the same which the world has been privileged to behold during these few last months, and is still beholding, is one of the latter character: one of the largest among the large comets; one of the brightest among the bright ones; and yet there is something else about it of vastly deeper import and of rarer occurrence than anything connected with mere size or brightness.

It was first seen—so far as the records go at present—on the night of September 7, or the early hours of September 8, at the Cape of Good Hope, by a worthy citizen in his villa half-way up Table Mountain. He had turned out, as is not unusual in that burning climate, for a saunter in his garden before dawn under the light of the stars; and there, over the eastern horizon, was the brilliant and already full-shining stranger. On September 11, it was seen at the Observatory of Rio de Janeiro, a mighty comet, and claimed as an imperial discovery there. And again on

September 17, a very respectable gentleman near London, spending his Sunday forenoon in telescoping the sun and its neighbourhood, stumbled on a comet close to the resplendent orb of day, conspicuous even through a dark-red glass; and he hoped to call it by his own name. But the chronological priorities we have described sternly forbid that, for each of these three supposed discoveries of 'a new comet' refers to one and the same body.

Next begin the observations of those who had been telegraphically warned by one or other of the successive discoverers that such a comet was visible. And here we must place with all honour the observations made at noonday on September 18, both at Lord Crawford's Observatory at Dunecht near Aberdeen, and by M. Thollon, at the grand new French Observatory at Nice. At both those places the observations were chiefly spectroscopic, and agreed well in their story. Now, what that wonderful instrument of modern research, the spectroscope, can say at all, it says instantly; and in this case it at once informed the observers, by a peculiar displacement of certain lines, that the comet had passed the crucial perihelion point of its orbit, and was hastening away from us again, almost as rapidly as it had, so few days before, shot down out of dark, distant space into our sun-illuminated neighbourhood. That important fact ascertained, there was leisure to consider the rest of the spectroscope's revelations: as thus—

It is now extensively known that comets shine partly by reflecting the light of the sun, and partly by their own inherent light, whether that be produced by temperature, combustion, or electrical currents. But nineteen out of every twenty comets yet spectroscoped, have shown for the material of their own proper light, nothing but the faintest, feeblest, coldest, order of shining stuff known; namely, the blue part which may be seen at the base of any little candle-flame, wax-taper, or farthing rushlight; and which shows a mere trace of a hydro-carbon gas in weakest combustion, barely raised above phosphorescence or Will-o'-the-wisp glimmer over marshy ground.

But the present great comet when similarly tested, not only showed salt, or the metalloid 'sodium' lines burning brilliantly, but iron lines doing the same—spectroscopic lines that can only exist where iron is so intensely hot that it rises as a gas, vividly incandescent in a more fervid heat than any of our furnaces can produce. No wonder, therefore, that when to the astronomers in the Royal Observatory, at the Cape of Good Hope on September 17, the comet was for a time projected to their point of view on part of the sun's disc, it was no black body, like that of the inferior planets Venus or Mercury at their transits across the sun, but was just as bright intrinsically as any part of the solar surface itself.

All these particulars are, however, merely optical details, *physical* features, modern outcomes of chemistry rather than astronomy. But if even they show this comet to be something so remarkable amongst comets, what says proper, gravitational, mathematical, astronomy about it,

both its history in the past, and prospects in the future?

The first result obtained in that way, was—that this comet of burning iron, moving at the terrific rate of three hundred and seventy miles per second (compare that with the speed of a cannon-ball moving at the rate of only sixteen hundred feet in the same small portion of time), must, at the perihelion point of its orbit, have grazed the very surface of the sun.

Next that the direction of its motion was retrograde, or contrary to that of all the planets, and to the sun's own rotation; but that the shape of its path, and its position in space coincided remarkably with a similarly abnormally moving comet seen in 1880, and thought to be revolving then in an orbit of thirty-seven years. But that comet again had been identified as being the same that appeared in 1843; though on that occasion it was moving in an orbit of one hundred and seventy-five years period, and was considered to be the same body that had appeared in 1668.

Usually, generally, almost universally, the period of revolution of any species of body, whether planet or comet, around the sun, is something of exceeding fixedness, or of the slowest possible alteration.

There is, indeed, such a thing as ether, or a most attenuated form of gas spread throughout otherwise empty space, and which, theoretically, ought, in course of time, if extended to millions of billions of trillions of years inconceivable, to reduce the velocities and decrease the size of the orbits of every planet and every comet revolving round the sun, until one after the other they fall into that burning mass; if, that is to say, its light and heat should have been able to keep up for any such most extraordinary duration of time. In the case of our earth's revolution, or length of its year, not the smallest portion of any such effect has been discovered by the best astronomical observations from the earliest times; but there is a certain comet, one of the smallest, faintest, lightest of them all, a mere feather in space, whose movements—after twenty revolutions of it round the sun have been observed—suggest the probability of a very small amount of shortening of its orbit. But with this grand comet of 1882, 1880, 1843, 1668, we have a galloping reduction of its period, in whole years, in place of tenths or hundredths of a second, the like of which has never been approached before in all astronomical experience, and which must inevitably bring it back to the sun in a few months only, or some time next year.

Evidently, then, this comet has experienced something much more resisting than mere ether; and the idea first arrived at and published by one of the best American astronomers, Professor Lewis Boss, of the Dudley Observatory, New York (the first savant also to identify this comet with the former appearances in 1880, 1843, and 1668) is, that it must have struck some part of the sun; has gone off wounded, as it were, crippled, weakened in its velocity, altered in its orbit, and doomed to fall a victim to greater force at the next perihelion passage. And what consequences will result from that?

No one can say positively; for such an event as a comet of any kind, but much less one of the greatest of comets, falling into the sun, has

never occurred before in the range of human observation. But the possibility of such an occurrence taking place sooner or later, did not escape the prescient genius of Sir Isaac Newton; and his remarks, as gathered from him in his ripe and perfected old age by his nephew, are still most worthy to be read for advice and instruction for the presently impending occasion. Shortly, we may state, that *some* increase of solar heat must take place, even if it were to depend alone on the conversion of the dynamical energy of the comet's movement, without allowing anything for the combustion of its material, though hydro-carbons, sodium, and iron, brought into sufficiently high temperature are very powerful burners; but we know neither what weight of these or any other matters the comet carries, nor *how* it will fall into the sun.

If the whole nucleus, or governing head, of the comet should in one grand bullet form, followed in a straight line by all the sixty millions of miles long of tail (composed, as now seems probable, of such meteoric stones as form the shooting-stars of November nights), all go into the sun at one place, and at one time, some result therefrom can hardly fail to be visible from our earth, even though it be at the enormous distance of ninety-two millions of miles.

But though the spectroscope has told us so positively that the comet carries iron, sodium, hydro-carbons (coals, if you will), it gives us no right to assume them in any quantity bearing any appreciable proportion to the vast mass of the sun already existing. And when meteoric stones fall from space upon the earth, somewhat in comet fashion, they more frequently than not break-up and separate on striking the upper regions of the earth's atmosphere, first into visible fragments, and then into invisible dust, whose particles fall so slowly, and spread so widely, that it is not known when or where they all finally reach the earth's surface.*

Similarly then we may fairly expect that this errant comet, which is already reported by two or three late observers to show symptoms of separating into two or more parts, will go on breaking-up, widely scattering its materials before it makes its next solar approach; will then be absorbed into the sun, and cease thenceforward to be an independent existence, no longer revolving as now in a distinct orbit of its own around that mighty mass of matter, force, power, light, and heat, concentrated from before all terrestrial time in our grand and beneficent sun.

P.S.—Writing in *Nature* on October 23, Major Herschel, R.E. (youngest son of the late great astronomer, Sir John Herschel), now in the south of England, describes the results of his numerous observations of the comet thus tersely, and rather quaintly:

'As a whole, the comet seems to have changed wonderfully little during the last three weeks since I first saw it. Its change of place, also, is so moderate that, at this rate, there seems no reason why we should not see it for months yet. What if it should not vanish at all!'

These rather crude speculations are indeed now rendered needless by what we have already stated

of the accurate orbit in space which the comet is really moving in. But for those who would like to be eye-observers themselves of the more apparent phenomena of the starry heavens, we may state that through the month of November the comet has been moving further and further away from the sun's place, and therefore rising earlier and earlier every night; or three-and-a-half hours before the sun at the beginning of the month, to seven-and-a-half hours at the end of it. That is so far as its distance from east and west alone is concerned; but then it is at the same time moving southward, and from being five-and-a-half degrees south of the sun's place at the beginning of the month, it will be seven degrees south of it at the end, the sun itself also moving southward at the same time. This will make observations of the comet very sensibly more difficult for all inhabitants of our high northern latitudes; but will not much interfere with the view of our countrymen in India, while it will greatly favour those who in Australia and New Zealand are far away in the southern hemisphere. Their view indeed will be limited by little but the growing faintness of the comet's light, as it recedes further and further from the heating, electrifying, illuminating sun, one hundred and twenty-seven millions of miles distant at the beginning, to one hundred and eighty-one millions of miles distant at the end of November. The comet's distance from the earth is also increasing, but not at so high a rate, by reason of the part of its own orbit in which the earth is moving at this season of the year; so that while the comet was distant from us one hundred and thirty-six millions of miles at the beginning of November, it will have increased its distance only to one hundred and forty millions at the end of the month.

VALENTINE STRANGE

A STORY OF THE PRIMROSE WAY.

CHAPTER XLVI.—'HIRAM,' SHE SAID DEJECTEDLY, 'AREN'T YOU GOING TO KISS ME?'

THAT a girl with five thousand pounds to her fortune, should be a lady's maid any longer, was of course downright ridiculous even in fancy. Even if Constance had lived, Mary's position would have been anomalous, and to seek a new post now was out of the question. So, with her five thousand pounds at the banker's in London, she provided herself with store of raiment, and took lodgings with a highly-respectable old lady at Brierham, and waited with patience for Hiram to come and marry her. But a cheque-book is hardly what Hibernicus calls the height of good company, and she felt as lonely and as unprotected, and almost as exposed to the ills of life, as in her days of poverty.

She waited with patience, and no Hiram came; she waited with impatience, and no Hiram came; she took to tears, and still he stayed away. And so, one day in the close of August, with much trembling and fear, she took a car, and was driven to the gates of Lumby Hall. She waited there, and sent the driver with instructions to ask for Mr Search, and to

* See article on 'Cosmic Dust,' in *Journal*, Nov. 4.

tell him that Miss Martial desired to speak to him. Now, in a little country town like Brierham, 'a'budy kens a'budy,' and everybody's business is everybody else's business. Mary was an heiress and a person of note, and even the local gentlefolks took an interest in her fate, and gossiped about her over their tea-tables. It was almost universally settled that to marry a valet would be the height or depth of folly, though everybody expected that the lately-favoured lover would be pretty urgent in advancing his claims. So, when it was known that she had received no visits, and had not stirred abroad, and had not indeed received so much as a note from anybody but Mr Valentine Strange and her lawyers, it was concluded that the lover was dismissed.

The relation of this history has sometimes made the mention of large sums compulsory, and King Croesus himself could not treat millions with greater *sang-froid* than the present writer. But I am not steeled by this familiarity with vast fortunes against a sense of the manifold values of even so small a fortune as five thousand pounds. 'Imagine, then, how glorious it glowed'—this snug little shining heap of money, in the eyes of certain unattached small gentry of the borough. At an interest of five per cent. that snug little shining heap would yield an unappreciable fraction over four pounds sixteen shillings and a penny-three-farthings per week, for every week of the fifty-two in a year, the principal remaining untouched—a metallic goose which could go on laying its hebdomadal golden egg for ever. The chief butcher of the place—for not alone were the smaller gentry interested—was a rosy-faced, red-whiskered young bachelor who did a great trade, and sometimes rode to hounds, when even the swells of the meet would nod and say: 'How d'ye do, Banister?' Now he looked on that little fortune in the lump, and had visions of plate-glass in the up-stairs windows, and a new slaughter-house. The corn-chandler, who was a bachelor also, turned it over in his mind, and saw a new frontage for his High Street premises. Captain Stagers, who boasted himself a cadet of the house of Windgall—the Earl of Windgall's seat, as all the world knows, is Shouldershott Castle, in the north—Captain Stagers, who had once held a commission in the county militia, and whose title stuck to him, seedy and shaky and disreputable as he was, saw, when he thought of that snug little sum, a perfect vista of barmaids serving drinks to a perfect vista of rehabilitated Captain Staggerses. Mr Quill, the lately-imported Irish solicitor, saw a larger house; and his mother, Mrs Croke, a second time widowed, had a beatific vision of new window curtains and an Axminster carpet.

Little Mary, unwitting of these fancies, sat in the car, drawn a little off the road in the shade, and waited for Hiram Search. The driver, though he was a discreet man, and by not so much as a wink betrayed himself, knew all about it, and had the clearest understanding of the situation. Returning after an absence of ten minutes, he stated that Hiram would follow by-and-by; and hinting in a conversational manner that the day was dry, that in the coming interview it 'ud be awkward to have a fool like him a-lookin' on,' and that there was a public-

house three hundred yards away, he received a gratuitous sixpence, and departed. Mary stood up in the car, and craned her neck to make observation of the carriage-drive, and in a little while saw Hiram, with his long legs striding out like the legs of a pair of compasses. At that spectacle her courage all deserted her, and she descended from the vehicle, and hiding herself behind the body of it, waited with palpitating bosom. Hiram came, looked about him, saw the car, and the fluttering dress behind it, and walked straight to where she stood.

'Now,' he said, 'I take this kind of you—I take it very kind.'

'Hiram!' said little Mary, looking up at him appealingly, with one outstretched hand set towards him.—He took the hand and shook it gravely, repeating that he took it very kind of her.—'Hiram,' she said dejectedly, 'aren't you going to kiss me?' Her lips pouted and trembled a little, like cherries that kiss each other on a shaken branch.

'Cert'nly!' said Hiram, and did it with solemn alacrity.

'Why don't you meet me as you used to?' she asked tremulously.

'Waal, my Pretty,' said Hiram, 'in the words of the immortal bard, Scotland stands not wheer it did.'

'I don't know what you mean,' she answered with an air of assumed disdain. 'You're not true-hearted, Hiram.'

'Mebbe I ain't,' said the accused; 'but I fancy I am.'

'Then,' said she with irresistible logic, 'why didn't you put your arm round my waist?'

'My dear,' said Hiram, serpentine his long arm about her, 'I'd always rather be asked into a man's house than be kicked out of it. I take this very kind of you, and very loyal an' true-hearted, my little dear.' He looked down at her with his queer fallow face beaming. 'You ain't sp'iled by fortune,' he said. 'Are you?'

'Hiram!' cried Mary again, and made an indignant pretence of tearing herself away from him. 'How could you think it of me?'

'I didn't,' said Hiram. 'Look at me. Is this here cheek of mine grown pale with care? Is my beamin' eye grown dim with hidden tears? Is there any sign in my hull anatomy of the gnawin' of the canker-worm? No, my dear. I ain't been fretting, not an atom. I've just been waiting for you to come, and say: "Hiram, your pretty loving little gal ain't changed." And now you come and say it, don't you?'—She said she did; and indeed, as she nestled to him and gazed up at him, it looked as if she meant it.—'That's all right,' pursued Hiram. 'Don't you see now, I couldn't come to you and say: "You took me when you was poor, and you'll have to stick to me now you're wealthy." I couldn't even seem to mean that. I won't say you'd have broke my heart, if you hadn't come. My heart's a tolerable tough old muscle, and it'd take a deal of breakin'. I won't say it wouldn't have ached. I think it would; but there's a margin between achin' and breakin', ain't there?'—Mary supposed so, laughing at his quaintly serious face, and holding his gaunt hand in both hers.—'But now,' resumed Hiram, 'there's no such thing as a clean hank as'll run five minutes without ravelling in this

world, is there? And we've got trouble in front of us.'

'Trouble?' she repeated. 'What should trouble us?'

'Don't you be scared,' said Hiram. 'Nothing much. But you can see I'm bound to the boss for awhile to come, anyhow. Now, it stands to nature you want to get married, and so do I. And it stands to reason that a young lady with a fortune can't have her husband acting in my present capacity. In any other man's service, I should feel the present capacity mean. I own up to that; I should feel it a derogation from an American citizen's privileges and proper feelings. But not with Gerard Lumby, Esquire. No. Well now, you see, I don't want to scratch a sore place, but he's had a great deal of trouble, and I am kind of sorry for him and attached to him. He's got used to me, just as you have, my dear; and if I went away just now, he'd miss me. He's mending. I can't make it out; but from the night Mrs Strange died, he's that changed I hardly know him.'

'How is he changed?' asked Mary, speaking rather because Hiram paused than for any other reason. She could not blame Hiram's unselfish devotion; but you may be sure that she looked forward to the waiting it promised with no great rejoicing.

'He used to be just as hard and cold,' said Hiram, 'as a frozen anvil. He wa'n't like a man after you three went away together. And now he's as sweet and mild with everybody as a roarin' democrat receivin' a British Prince. He's sad sometimes—that mournful, it'd melt the innards of a Bengal tiger only to look at him. But it ain't the same kind o' sadness; and him and Valentine Strange was arm in arm walking up and down this road two mortal hours the day afore yesterday.' He paused after that statement, as if he expected to be told that it was incredible. Mary received it with an astonishment which justified his expectation.

'Arm in arm!' she said. 'Mr Strange and Mr Lumby! Mr Gerard?'

'Arm in arm,' he said. 'And looking as friendly as a pair of rival actors. Only it was plain they meant the friendliness, and the rival actors pretty gen'ally don't.'

At this moment, a step sounded in the lane, and Mary escaping from his arm, peeped round the corner of the moss-grown wall. 'The driver's coming back,' she whispered.

'Kiss me quick, my honey!' said Hiram. 'I shall see you soon. Likely as not, drop in and ask you for a cup of tea this evenin'.'

The driver appeared; and Mary, with a final shake-hands, as if no tenderer farewell had just been taken, entered the car. Hiram, with mighty gravity of demeanour, watched her driven away, walked back along the gravelled drive, entered the house, and marched straight into the presence of his master.

'Well, Search,' said Gerard, 'what is it?'

'Can you spare me this afternoon and evenin'?' Hiram asked.

'Yes,' said Gerard, looking up from a book which lay on the table before him.—'Search,' he said suddenly, and with a little smile, 'I have been neglecting your affairs very sadly. Are you going to Brierham?'

Here, for the first and last time in this narrative, let it be recorded that Hiram blushed. 'I am,' he said, defensively.

'Of course you are. Why haven't you gone before?'

'Well,' said Hiram, 'there was reasons, good reasons.'

'No trouble, I hope?' said Gerard.

'None in the world,' said Hiram.

'When do you think of getting married?' asked Gerard. 'I suppose I shall lose you soon?'

'No; you won't,' said Hiram. 'We ain't in any hurry.'

'Very well,' said Gerard quietly. 'She's living with old Mrs Norton, I think—isn't she, in Brierham High Street?—Ah, I thought so. Will you tell somebody to saddle Roland and bring him round? I shan't want you again to-day.'

'Thank you,' said Hiram, and went away on his errand.

'No train for two hours,' said Gerard to himself with a sad little smile. 'I can do it in an hour easily.'

Ten minutes later, he was at the hall door in attire for the saddle. A groom led Roland round; and the young fellow, mounting, rode away, straight into Brierham town, and dismounting at the hotel, walked across the quiet sunny street and rang at Mrs Norton's bell. It happened at that moment that Mary was in converse with Mrs Norton. Your feminine lover seeks a confidante as a duck seeks the water. This, like other generalisations, may be disputed by singular examples; but Mary was not a very exceptional young woman, and Mrs Norton knew how the land lay; whilst the butcher and the corn-chandler, and the seedy captain and the Irish Quill, and *hoc genus omne*, surveyed it wrongly, and their judgment of its qualities was all awry. At the statement that a gentleman was in the parlour and wished to see her, the old lady bustled down, and was amazed to find Mr Gerard Lumby standing there.

'Mrs Norton,' said Gerard, shaking hands with her, 'how do you do? I am here as a conspirator, and I want you to be another.'

'Lawkamussy, Mr Lumby!' said the old lady, quite flustered.

Gerard explained. 'I want to see two people happy, Mrs Norton. One of them is the young person now residing under your protection, and the other is'—He paused.

'I hope it's the right man, sir,' said the old lady, smiling nervously.

'I think it is,' said Gerard. 'Do you know who the right man is?—Very well. If I am wrong, correct me. I think the right man, who is in a position very much below his worth, wants to put off the marriage because he is attached to his employer, and because he thinks his employer cannot spare him.'

'It's like a dream, your saying so, Mr Lumby,' the old lady cried out. 'She's just been telling me them very words up-stairs.'

'Very well, Mrs Norton,' said Gerard. 'I thought it was so, and I wanted to be sure of it.'

'She's a dear nice girl,' said Mrs Norton doubtfully. 'Do you think, sir, as he's worthy of her?'

'My dear lady,' said Gerard, 'Mr Search is

a pearl among men. The woman who marries him is to be envied, if she has only the sense to know his value. And whatever you may think of his position, he is just as well-to-do as she is. But I forgot. That's a secret. Don't say a word about it till they're married.' So he shook hands, and rode away again, leaving the old lady almost bursting with her secret.

(To be concluded next month.)

COUNTRY PLEASURES.

To outsiders, country-life often seems dull; and it must necessarily be so to some extent, as compared with life in town, unless there is not only a keen and perceptive love of nature, but also a considerable variety of taste. A man must be able to find not only an ever-varying and enduring charm in the sublime grandeur of lake and mountain, but also an attraction sufficiently engrossing to amuse him amid such commonplace scenes as the moist bank of a shady lane, or the tangled luxuriance of a hedgerow or wayside thicket.

A stranger looking down on the brown Lancashire landscape that surrounded our author, Mr Milner, when he began with the year his rambles, which have been charmingly described in his book, entitled, *Country Pleasures* (London: Longmans & Co.), would have pronounced the prospect tame and uninviting in the last degree. But to the initiated eye it was full of interest; each hidden dell among the breezy uplands held a secret treasure-trove. He knew each sequestered wood where the catkins of the hazel were already beginning to swell; each nook where the broad wrinkled leaves of the primrose were already pushing up through the moss to meet the genial breath of the advancing spring. Even in the sombre winter hue of the landscape, there was beauty—the beauty of shifting light and shade; when the sunlight breaking through the heavy clouds, would light up for a moment the brown dales and leafless trees, making of the desolate scene a picture of evanescent but glowing brightness. Then his garden—a green silvan inclosure, with sufficient space in it for wild-flowers to grow in the tangled profusion of their native glades and woods—was a constant source of delight to him. Like all flower-lovers, he knew each several plant—each blossom was an intimate and particular friend. He noted the slightest change that occurred in them, and during the tardy, trying days of spring, hailed each new leaf that uncurred to the cold north wind. Winter went and came again, as is its fashion in our uncertain climate; but in his garden he had, what many garden-loving folks sigh for in vain, a particular and highly-favoured corner—'where we always get out of the sharp wind, where there are a yellow jasmine and a few rose-bushes, and a shapely thorn with a seat under it. Round this is a little Dutch garden, in which the tulips and crocuses will first be seen.'

It was quite an era in his homely calendar when the faint February sunshine began to lend a little warmth to the cold moist air, and the delicate green tips of the snowdrop and crocus could be observed breaking through the half-frozen soil. Next—for the true lover of the country is always more or less a naturalist—he

began to expect, and then to hail with rapture the first notes of the blackbird and thrush, those sweet and gladsome heralds of the spring. Mr Milner first heard their welcome notes at the close of a wet week in February. 'A wet week in February!' you exclaim; 'can anything be more dreary?' Dreary enough, no doubt, to many. But to the observant eye, those dim and rain-suffused skies, with which we are so familiar, have a soft and gracious charm of their own. He has still much to learn in country pleasures who has never observed what a variety and beauty there often is in rainy weather; not only in those sudden showers where the sun sparkles through the gleaming raindrops with a fitful radiance, but even in the slow-falling misty rain, with little or no wind to blow it about, and no shaft of sunlight to illumine the masses of soft gray cloud and vapour. It is, of course, very possible to have too much of such a thing; and it is somewhat difficult always to remember, as we look at the drenched, water-soaked land, that it is to our moist skies that we owe the fresh colouring of our woods, and the vivid green of our meadows and grass-lands. Then there is always the delight of the fine morning or evening after the rain to look forward to, when the heavy skies burst asunder as if with a supreme effort; and the sun shines out warm and bright, and the cold moist earth basks in his smile; and the joyous breezes rustling through the leafless trees, seem already sweet with the scent of flowers. It was on such an evening, glorious and hope-inspiring, when the waning sunset faintly touched with its parting radiance the pointed gables of the ancient house, that Mr Milner heard his first thrush. A gush of melody clear and silvery rose flute-like and sweet into the darkening sky, and he knew that the birds were beginning to mate, and that the first nest—another landmark in the advancing year—might soon be looked for.

First, however, came Shrovetide, dear to the children's hearts, with its great bonfire of faded Christmas holly, and its pancakes tossed by unfamiliar hands. 'There is wisdom,' Mr Milner thinks, 'in breaking the dead monotony of modern existence by observing, especially for the sake of the young, such simple festivals as yet remain in vogue;' and so Shrovetide was observed with all its peculiar honours of hissing pan and savoury cakes.

In the beginning of April came the thristle's nest. This particular bird was a thrush with an evident taste for letters, for she had inwoven with the grass and slender twigs of her nest a scrap of a London newspaper, and had fixed her little dwelling snugly and comfortably beneath the overhanging leaves of some ivy that covered a garden summer-house. 'A day or two later,' says Mr Milner, 'it had been plastered with mud, and it was also lined—as a piece of luxury, I suppose—with the soft fibres of some decaying wood. Yesterday, I found that the first little blue egg had been dropped into the nest, which the prescient bird had finished three days before. And here too was beauty, the little regarded beauty of the bird's egg, beauty of form and of colour, perfect elementary form, and delicately simple colour lavished upon a corner where no eye might ever have seen it, where, probably, by no other eye than my own will it ever be seen.' This bird,

like others, became very familiar with its observer, and allowed him to come close to her nest without showing any signs of fear.

Spring in her full flush and glory was now abroad in the land; the delicate leafage of the beech was in all its first silky freshness; the orchard-trees were in bloom; the cattle in the flowery meadows were deep in grass; the pigeons were sunning themselves on the farmhouse roofs, and the first early swallows were twittering under their eaves.

This beauty, home-like and familiar, Mr Milner was fond of contrasting with the vast moors that sweep desolate and brown around the huge 'buttress' of Kinderscout in Derbyshire. These were easily reached by train; and the very mode of transit, swift and noisy, an apt embodiment of the untiring energy of the nineteenth century, enhanced to the lonely beholder their solitude and immobility. 'Having once,' he says, 'climbed to the tableland of these moors, you are in an isolation of solitude which can only be compared with that of mid-ocean.' Their heathy expanse is a world by itself, set apart and consecrated to solitude, but yet a world full of beauty. The keen bracing air is permeated by the scent of the gorse and wild-thyme; masses of cloud drift along the breezy sky, now casting deep shadows on the sombre sweep of heathland, and the next moment parting asunder to dart a gleam of brilliant wind-blown sunshine on the emerald strips of moss, the clumps of brown and green fern, and the gray weather-beaten crags that rise like landmarks from the deep-toned umber hue of the heath. The moor-birds rise from beside the path with a wild and piercing cry. The glimmer of the sunshine becomes more unfrequent; the hurrying clouds drift up into more compact masses; everything betokens the coming tempest. A few minutes more, and the moorlands, with their shifting lights and shadows, will be wrapped in a cloud of swirling mist and rain.

With summer comes the hay-harvest in the beginning of July, the hottest time of the year; when, if the season be beneficent, we have bountiful outbursts of sunshine, and the scents of the rose-garden mingle with the fragrant breath of the new-mown hay. The most handsome wild-flower of July is the foxglove. Its favourite habitat is the face of a steep ravine, where the bank is too precipitous to afford a footing to the birch and hazel that clothe its lower declivities. There, on the shallow soil, or in clefts of the out-cropping rock, multitudes of foxgloves flourish, their pendent bells of purple waving in the breeze, or reflected in the still pools of the streamlet far below. There is no monotony in this blaze of purple beauty, which blends in admirably with the rich hues of the glen, with the fern and hazels, and the silvery stems of the birch-trees, and the tangle of wild-flowers about their roots, woodruff and wild-mint, and the gay willow-herb, and the humble little yellow tormentil.

Towards the end of July, the birds, whose domestic duties are finished, and whose families are comfortably established in the world, cease to sing. The woods henceforth are comparatively mute, until the robin begins his autumn song; and from his Lancashire garden Mr Milner moved to the coast of Arran, and noted with

some surprise that its northerly shores, which he had supposed to be sterile, produced abundance of flowers. 'At the edge of a wood only a few yards from the water, and where the salt spray itself must often fall, I found,' he says, 'diminutive rose-bushes covered with ripe berries; the wild chrysanthemum, the purple vetch; the woodruff, tiny in size, but sweet as ever; and even the dainty forget-me-not; while the woodbine festoons the trees, climbing to a height of twenty feet.'

But more beautiful even than the flowers are the effects of sea and mountain. The sea, which is always in the foreground of the picture, is full of surprises, of infinite varieties, which often strike the beholder as inconceivably beautiful. Every change of the changeful weather has its own peculiar charm; and the soft gray September skies of Arran often brighten at sunset into stretches of lambent gold, resting on a bank of bright crimson, which passes on the far horizon into dusky purple; and beneath that imperial pall, the heaving expanse of water, and the shallow pools left on the shore by the receding tide, gleam out as if touched with molten gold. The colouring is almost too intense to be steadily looked at. The grass and the shore-plants, and the weather-worn rocks, and the hills with their wild peaks standing out against the sky, all glow with a deep and yet subdued intensity of shade, which brightens the rose-red glimmer of the rock-pool at your feet. Up among the hills at the mouth of Glen Sannox, particularly towards twilight, the atmospheric changes are often very fine. Sheets of mist sweep around the peaks of Goatfell and its sister heights, which, like the sentinels of an enchanted land, loom through the masses of gray vapour, indistinct, vast, and threatening. The gloom of night is beginning to overspread the landscape; but the sun has not yet set; and suddenly, as if by the touch of a magician's wand, the veil of mist is swept aside from the broad brow of Suidhe Fergus; a soft subdued glow of saffron suffuses the darkening landscape, brightening gradually into a full gush of sunlight. The slopes and gullies with which the sides of the hills are seamed are distinctly seen for a moment, brought prominently out by the flood of light. Then the gleam of sunshine fades as quickly as it came, the clouds gather thick and fast over the shifting canvas, the wild west wind rushes down the gorge, hurrying mists efface the glowing picture, and far behind, 'strange sounds rushing down the unseen gullies with an almost human cadence,' bid the adventurous traveller a stormy good-night.

Autumn in the Lancashire garden had its own peculiar pleasures. There were plentiful stores of fruit to be gathered in, and clumps of woodland that rivalled, with their purple and russet-red and gold, the gayest hues of the parterre; and from amid the leafless boughs of a giant elm was heard 'the sweetest, most cheery sound which autumn has to give—the clear whistle of the robin.'

Halloween was kept as Shrovetide had been, by the youngsters of the family, with its own appropriate ceremonies. Chief among these was a great pail of water, which was set in the middle of the kitchen floor and filled with apples—the ducking and splashing for which were a source

of great fun; and if one chooses to moralise,' says our author, 'one may see how success in the slippery chase falls only to the youngster who can bring to the pursuit both cunning and perseverance.'

November and December, with their long dark nights, and days dim with mist and fog, have a natural affinity with folklore, and Mr Milner tells us that the district around him, lonely and isolated, is still a stronghold of ancient superstitions. There are troops of harmless fairies—'little men,' as they are called—whom it is sometimes the height of good fortune to meet. Wonderful legends are told of the weary ploughman suddenly confronted on the upturned furrow by a tiny brown figure, who offered him a draught of ale in a nutshell; which the countryman accepting in simple good faith, found to be an earnest of all possible good things.

A mountainous country suffers less from the fury of the elements than a landscape whose chief beauty consists in its colouring, in the harmonious blending of wood and valley and meadow. The stormy winds of November had swept away the last lingering splendour of the autumn forests, but Mr Milner found the Lake country still pre-eminently beautiful. In support of his admiration of winter among these classical lakes and hills, he quotes an eloquent passage from Wordsworth's 'Description of the Country of the Lakes in the North of England:—'The variety of winter-colouring in the hills is such, and so harmoniously preserved, that it leaves little cause of regret when the splendour of autumn is passed away. The oak coppices upon the sides of the mountain retain russet leaves; the birch stands conspicuous with its silver stem and puce-coloured twigs; the hollies, with green leaves and scarlet berries, have come forth to view from among the deciduous trees, whose summer foliage had concealed them; the ivy is now plentifully apparent upon the stems and boughs of the trees and among the lichen-covered rocks. In place of the uniform summer green of the herbage and fern, many rich colours play into each other over the surface of the mountains—tawny green, olive, and brown, beds of withered fern and gray rocks being harmoniously blended together.' It is, in fact, a perfect paradise of what painters call 'low tones,' no bright colours, but the soft subdued green and gray of mosses and lichens, and the faded browns of grass and ferns in all varieties of shade. Round the door of a comfortable farmhouse, where our author found shelter for a few hours, the colour was deeper and warmer; for the crimson light of a frosty sunset filled the air, and harmonised with the cheerful farmyard sounds; the cocks were crowing, the oxen lowed from the courts, and the glad voices of women and children broke the wintry stillness. Every one was sliding and tumbling and getting up again amid peals of jocund laughter; and far up in a still world of their own, the snows on the higher peaks of the everlasting hills reflected back in a thousand hues of beauty the smile of the sunset. Some blushed rosy red; others caught only a faint pink glow, which quickly faded into spectral blue; while others, again, glistened cold and bright, as if decked out in robes of shining silver.

This charming round of Country Pleasures ends, as is meet, with Christmas and New Year, with plentiful decorations of mistletoe and holly, and plentiful good cheer on the board, and a round of kindly visits to neighbours, rich and poor alike. One of the latter, John the Mower, thus pronounced his eulogium on the happy Christmas-tide: 'Ay, well—ay, to be sure—if we could be ever as we are now, full of good meat and drink—meat and drink.' The robin on the thorn, who has just had his dinner of crumbs from the window-sill, takes perchance the same materialistic view of Christmas as John the Mower; at all events, he also is happy, and undaunted by the cold, trills out upon the frosty air his clear, cheerful song, in which we hear an earnest and promise of the coming spring.

BABOO ENGLISH.

THE following specimens of letters and petitions are taken from a large collection made by a gentleman during a six years' residence in British Burmah. It should be borne in mind that the habit of the Oriental, when he has a request to make, is usually to hand in a written petition in lieu of asking by word-of-mouth. Those of the documents quoted below which are from Chinamen and Burmese, are written by their own hands; while those from natives of India are mostly written by professional petition-writers, who may be seen sitting under an umbrella, at a light trestle table, beneath a tree, near the entrances to the law-courts.

The things that chiefly agitate the Oriental mind are (1) desire to obtain an appointment; (2) desire to obtain increase of pay; (3) desire to obtain leave of absence on account of the death of some relative. It is no uncommon thing for a clerk to request leave of absence half-a-dozen different times to bury the same mother, truthfulness being an unknown quality in many parts of the 'gorgeous East.'

The following mass of incoherence is from a Burmese 'gunner' to the superintendent of a saw-mill. His desire is to obtain a bonus—on the number of squared logs of teak which he is able to turn out—in addition to his pay.

To G. MUIR ESQR. Chief Manager.

The humble petition of Ko Youk respectfully sheweth to represent that; I have loyally, and diligently served under merchantile service in various capacities since 1870 during which I invariably earned the approval, and commendations of all my superiors. That while several persons are now and then promoted gradually increasing in the subordinate; That in 1880 when I was proposed to station at Moulmein the best European Manager serving in the Moulmein district I was selected by the Chief Manager Mr R. S. Jones for the post as Head Clerk at Mr Gregory's Mill and I could act as Manager in any of the mills that are Trading in the Town of Moulmein I understand that my manager is prepared to reconsider the claims of all the subordinate who have not hitherto receive due promotion in the service I therefore pray that my manager may carefully inquired of my approved past service and can foward my Certificate bound

as Manager having being served under your service daily respectfully beg to inform these few request that I am also liable to get some extra money on account of my Square Conversion which has been given by the Former manager's on the Squaring Mill I conclusion having a large family to support with I have to thank your esteem favor and hoping to favor with the above request for which I shall ever thankful to your honors gratitude ; Hoping to be excused at your honors valuable time P.S. Therefore having served under your service many Head Clerks who have not had any a English education in case of necessity I could do any kinds of English account in the Timber Trading line and *being very curious in my consideration of getting extra money in the Old Mill is somewhat like hatching a great many eggs without a Hen* If I dont try hard in conversion of Squares how can you expect to get the Slabs for Scantling &c.—I remain, &c.

The passage we have italicised is particularly lucid. The next specimen is from a Madrassee Christian who has benefited by an English education.

RANGOON, 3rd January 1881.

To J. CONNELL, Esquire,
B. B. T. C. Limited & Co.
Rangoon.

GENTLEMAN—I beg most respectfully to bring these following few lines to your benign consideration Hoping to Satisfy my confused mind.

Sir, I have come from Madras some months ago, and I have tried in many places for a post except this Office I am Sorry proved unsuccessful. Having heard that you are a Liberal Generous and Pitiable gentleman towards poor. I have made up my mind to come and ask your honor for a post under your controlobility in the Firm or in the Mills.

Praying to comply my request for which act of charity and kindness I shall in duty bound shall ever pray—I beg to remain, Gentleman, your most obedient and humble Servant, V. REUBEN JACOB.

By the following amusingly ambiguous epistle, a Burmese clerk states his incapacity for work, and expresses a hope that further sick-leave may be granted him :

SIR—Having the feaver again more than before I wish you will not have the vexation to permit me further.—I Remain Yr obed.

MG CHIT Oo.

The following speak for themselves :

MOULMEIN, 9th April 1881.

SIR—We are exceeding glad in penning you these few lines, suspecting the holidays of the Burmese new year. During this time all the Burmese offices or of—the foreigners ought to be closed. Because there is custom over the whole communication not to do even the least important work. Therefore will you kindly grant us leave for three or four days. We hope that you will grant us leave without any discontent.—We are yours most Obedient servant, &c.

SIR—We the undersigned beg to inform, that on Tomorrow our Burmese Lent beginning Feast

will be fell, so we shall most humbly beg of you will be pleased to allow us an holiday as usual.—We remain, Sir, Your Most Obedient Servants, &c.

HONOURED SIR—I beg most respectfully prays that your honor will be kindly pleased allow me an advance of R30/ being of our Chinese new year, but, I am short of expense for that day.—I beg to remain, Gentleman Sir, Your Most Obedient Servant,
MAY SHAIING.
[Chinese]

RANGOON 6th February 1880.

SIR—I have the honor to inform you that I was sunstruck and Fever on account of that Your servant could not attend to work.—I remain, &c.

The humble and respectful petition of K. B. B—.

Most respectfully sheweth—That your petitioner, an under graduate of the Calcutta University has formerly lived in credit in the world, but through a variety of losses in several law-suits and through the sudden death of some lively young members of the family, is reduced with his family to the lowest state of poverty and destitute of the necessaries of life ; and being desirous to discharge his duty as a sole guardian, he has presumed to address himself to your honor for one of the present vacant place of clerkship in your Office, and for which he can make it appear, he is properly qualified, and will produce certificates of his education, capacity and good moral character, and if so happy as to seem worthy of your notice, he shall, on all occasions observe the strictest fidelity, and make it appear to the world that he has not been unworthy of your favour ; And as in duty bound shall ever pray.

On the 24th of October 1881, the writer promised a Burman, Moungh Khyin, to employ his brother-in-law, Moungh Shway Yee, if he would come round to the office. This is the letter of introduction which Shway Yee brought : the meaning is, that Moungh Khyin will be much obliged if Shway Yee is employed according to promise :

DEAR SIR—Herewith I send you the bearer Moungh Shway Yee, was employed under you in the Office, when you promised me Yesterday in Our Yard. I shall be much oblige and thankful to you.—Yours faithfully, MOUNGH KHYIN.

Boon Paw, a Chinese tally-clerk, being laid up with fever, his brother, Ah Lowe, writes for permission to send him to his father in Moulmein, and wants to know if he is to receive half-pay or none at all while he is ill. This is how he puts it :

SIR—My brother Boon Paw Tally clerk, suffering by fever since about 20 days ago, and he is taking our Docter advise, but sorry still very bad, so begging of you be pleased to allow him to go back Moulmein on Tomorrow by his father to cure there. And also please let me have an order the 15 Days he is in fever in one month of Augst is to be cut all or $\frac{1}{2}$ to be paid.—Yours obediently, &c.

The final specimen we shall here give is an application for work, made by a native of India,

to a merchant of Rangoon, and was thought so comical by the recipient, although he was—like all other residents in Rangoon—daily deluged with strangely worded petitions, that it was published in the *Rangoon Gazette* of February 14, 1879.

'There is life for a keen look.'

LIFE SUPPORTING SIR—The bearer of this begs to bring his most deplorable case before you trusting you to be his parent and guardian. That he is brought to such a low circumstance that he can hardly support himself and his family. Now your humble petitioner begs to say that if there be even a petty post in clerks under kind control please try your utmost to confer the same on him. Sure he is in an unutterable trouble that this life is heavier to him, nay, the shades of death are happier to him than those of life. Let it not be hidden that as in these days he is out of employment it would be your great kindness to confer some good and supportable post on him and as he is a man of large family to please for your blessed name's sake be a father to him and his family. Please lose not this good opportunity out of your all powerful hands of making a room for him under you in clerks. Surely in such a hard circumstances your refusal will be the case of real death and your kind reception the real cause of life for him.

Now let any one go, but please try your utmost to save him, pass by any one, but pass not by him, reject some one, but reject not him, and put asunder some one, but make him adhere close by in any way you can. Please take him in your kind honour's office as soon as possible. Nay, sooner than the twinkling of an eye.

As one has the source of his life in this and another in that way but he alone has none except thee and God alone. O Thou high-ranked man of good humour. For this act of your over running you shall both be blessed and rewarded from heavens.

P.S.—A drowning man will catch at a straw. Pour not water on a drowned mouse. Give and it shall be given unto you. The measure we mete to others shall be meted to us again. A withered purse, a withered face. Sorrow's best antidote is employment, &c.

He begs to remain,
most honoured Sir,
with much gratitude
your most obedient and
foot-kissing servant
18-7-78. ILLAHIE BUKSH.

BOOK GOSSIP.

It may be pointed out as a characteristic of our modern men of science and of their immediate predecessors, that, however they may differ from many of their fellows in matters of intellectual research and speculation, they have led notably good and true and useful lives. Hence the record of such lives has for their successors something more than the interest which attaches to merely great names; there is in addition the healthy stimulus to intellectual and moral achievements which we derive from the contemplation of adverse circumstances patiently overcome, of high ends worthily gained, of life-purposes devotedly followed out. This is indeed the great end of

biography; and biography which, while embracing many things, does not embrace this, had better not be written.

Some of those men of science have had biographers innumerable, others of them are less written about, and consequently less known. To supply this defect, and to render the chief names among Botanists, Zoologists, and Geologists more familiar to the rising generations, Professor P. Martin Duncan, vice-president of the Geological Society, has published a volume of such biographies under the title of *Heroes of Science* (London: Society for Promoting Christian Knowledge). But the book is something more than a mere collection of biographies. In regard to Botany, for instance, chapters are given to the consideration of old fancies and notions about plants, such as are found in the *Metamorphoses* of Ovid, and in the works of the early Greek writers. The author also sketches the lives of the ancient botanists—Aristotle, the first botanist, born 384 B.C., Theophrastus, Pliny, and others. Then, after the long sleep of centuries, we have the revival of science that followed the release of the human mind from the trammels of superstition consequent upon the great religious reformations of the sixteenth century. This period gave us the quaint old English naturalist and traveller, John Ray, and the earliest systematic botanist in France, Joseph de Tournefort. Then by-and-by came Linnaeus, and with him the formation of botany into a science, with his artificial system of classification, and his untiring and heroic energy in the pursuit of plant-knowledge.

In the department of Zoology, Professor Duncan follows a similar method of treating the subject, beginning with the ancients, and descending to modern names, including Buffon, Pennant, Lamarck, and Cuvier, to each of whose contributions to the science of animals reference is here made, with well-written and graphic portrayures of the men themselves, as they appeared in the daily round of their life and labours. Then we have the Geologists—the heroes of a newer science than either of the foregoing. A wonderful science, that has made familiar to us a kind of knowledge which was at one time thought entirely beyond the reach of man's intellectual vision, revealing to us an exact and impressive picture of our earth in its various stages of secular cooling, from the time when it was little more than a molten mass with a newly-formed igneous crust, down to the time when this crust was covered with rocks made from its own waste materials, ground down by ice and tides and rains, and spread out in stratified order at the bottom of seas and the mouths of great rivers, and gradually covered with the earlier forms of vegetable life, till we have the globe as we see it now with all its wealth of animate and inanimate existence. This portion of Professor Duncan's work seems to us to be the most interesting, as dealing perhaps with the heroes of a science in which he may feel a stronger and more genuine interest than in the others. The story of Hutton, the Edinburgh geologist; of William Smith, the father of English geology; and of Murchison and Lyell, its later leading representatives, is well told by our author, and cannot fail to awaken in the minds of readers some stirrings of that noble emulation which led these

workers on from victory to victory. We have not for a long time seen biography at once so healthy in its tone and so instructive and stimulative in its effects.

A SLIGHT SCARE.

In the first of those four entertaining little volumes, *Curiosities of Natural History*, the late Mr Frank Buckland has related, in his pleasant, chatty, discursive style, an anecdote of a gentleman in India who was favoured with the presence of a cobra da capello under the flooring of his bungalow. Snakes very often take up a residence beneath houses in this way, especially in tropical countries, where the buildings are frequently of wood, and usually raised from the damp or insect-teeming earth on piles of some sort; such a situation being almost inaccessible to anything but a 'varmint.' Here they rest in security by day, and by night sally forth on excursions prejudicial to the henroost, to the frogs in the water-tank or bathroom, or to the rats and other small-deer which always affect the neighbourhood of omnivorous man. So habituated do people become to these creatures in serpent-ridden lands, that so close a vicinity to them is often but little regarded, and scarcely any attempt is made to eject the visitor. I once slept in a house up in Guatemala where a huge venomous snake, a *toboba*—or what was believed to be such—was known to have made the under-space among the piles his abode for more than a year, having been frequently seen by lantern-light, though it never made its appearance indoors. Not that people are fonder of such things in this part of the world than in any other; possibly, they are a little lazier; but in any case, familiarity will always breed contempt. Mr Buckland's friend, however, so little appreciated this confidence on the part of the reptile, that he went the length of cutting a hole in his floor, baiting a fish-hook and line with a frog and passing it down. The lure succeeded. That same night he was aroused by a tremendous scuffle and commotion under the boards; and the line being drawn up, brought with it the unlucky cobra, with its neck expanded and 'spectacles' all agog—when, we may be sure, it quickly received the *coup de grâce* from a coolie's bludgeon.

I had been reading this story one hot night at sea as I lay in my bunk, and had fallen asleep. Scarcely a breath of air came in at the open scuttle, and the candle in the swinging stand burned with an unflickering flame, though the good ship *Elbe* was steaming down the coast of Brazil at the rate of thirteen knots an hour; for my cabin was on the 'lee-side,' and the lower edge of the porthole descended pretty nearly to the level of the water as she rolled slowly and rhythmically to and fro on a long swell from the westward. How long I slept, I cannot say; but when I awoke with a start, the candle had burned out, and the cabin was pitch-dark. What had waked me? Was it fancy, bred of the snake-story I had been reading, the impression of which was still vividly upon me, mystified and exaggerated by the sudden transition of ideas, or did I really hear a scuffling and flopping on the floor? Yes, there was no doubt about it! Something was

slapping and writhing about over the bare boards with just such a noise as a hooked snake would make. After a moment's hesitation, I sprang out of bed to strike a light, and had taken a second step with the intention of groping for my matches, when, horror! I put my bare foot on something cold, slimy, and *alive*—wrigglingly and twistingly alive, as it 'squirmed' under my naked sole! I think I have stood on few objects for a shorter space of time than that during which I lingered on that creature; and darting back to bed again, lay there with a beating heart, and bathed in perspiration. Presently, the flopping ceased; but only to break out with renewed vigour after the lapse of a minute, and just as I was cautiously attempting another descent upon my matches, causing me to retreat once more with extreme expedition. It soon stopped again, and was resumed at longer and longer intervals and with less energy. The cobra was evidently growing weaker. At length, it ceased altogether. Whereupon I seized all the garments within reach, and hurled them on the floor in the direction from which the sounds had proceeded, hoping the reptile would seek shelter underneath them and remain quiescent during the night.

Now, of course this was all very foolish. There was no cobra within thousands of miles of me; besides, I am not more afraid of a snake than other people, knowing perfectly well that if I lay still it would not molest me. I think I would, under most circumstances, rather have a cobra than a cockroach near me. Thus I reasoned with my absurd terror, but to very little purpose. If there were no cobras in Brazil, there were other snakes just as venomous—rattlesnakes, jararacas, and bushmasters. Snakes often found their way on board ships in bales of medicinal woods, coir, and other cargo; or dropped into boats as they lay under bushes or along palm-shaded jetties; or escaped from boxes surreptitiously smuggled from the shore. It recurred to my disordered brain—I would have it remembered that I was weak and unwell—with great force, that only a short time before, a living serpent was actually discovered under the capsule of the patent lead on the quarter-deck of the Royal Mail steamship *Douro*, within a hundred miles of where we were, the reptile having obviously climbed up the quarter-line as the steamer lay moored to the wharf at Santos. Furthermore, though I can tolerate anything which I can see and understand, I have the greatest respect for the unknown in darkness.

All very foolish, as I kept reproaching myself; but it was of no use. The silence which succeeded was even worse than the slapping noise, and my fever-heated imagination kept picturing the snake gliding up over my bunk, and made me start as I fancied I felt its forked tongue darting against my hand or cheek; while I repeatedly kneaded my foot, to assure myself of the unreality of the thrills which shot up my leg. At last I gave way, and standing up on the bed, shouted through the ventilator at the top of my voice for the quarter-master. By-and-by I heard a distant 'Ay, ay, sir!' floating down the hatchway from the deck above, and presently saw the welcome gleam of a lantern along the alley-way. I was somewhat ashamed of my trepidation when the light arrived; and proceeded to remove the

pile of coats and trousers, seeking for the 'varmint' with a boldness which was not mine a few moments before. And there, on the floor, which glistened with its beaten-off scales, we found—a *flying-fish*, as big as an ordinary mackerel, which had sailed in at the open port as the ship rolled to leeward, and had danced itself to death on the boards! Its entrance must have been a pure accident, though not a very uncommon one in these latitudes. The fish seems to have little power of directing its flight in the air, and the aperture of the scuttle no doubt came in its straight line of course. I need hardly say I did not mention anything of my late ophidian hypothesis to the quartermaster, but presented him with the subject of it. Probably it was cooked and eaten as soup as he came off watch, for the flying-fish is one of the most delicious of the denizens of ocean.

Flying-fish are certainly preferable to venomous serpents in one's cabin, even were the latter entangled with hooks in their stomachs; but the finny intruder can make himself disagreeable too, at times. I remember an old Frenchman rushing on deck one night with his face and breast streaming with blood, roaring out that the Enemy of mankind was below; when it was found that the 'enemy' on this occasion was a large flying-fish, which had flown against him and scratched him severely with its enormous fin-wings.

THE MONTH.

SCIENCE AND ARTS.

RESPECT for relics of the past, and a desire to preserve those landmarks of time which speak of a period when no books were written and no histories compiled, are feelings which denote an advanced state of civilisation. We have learned Societies which take perhaps more interest in prehistoric man and his cave-dwellings than they do in their fellow-beings of this present time. We have Archæologists who can tell us all about the pile-dwellings the remains of which are found in Swiss lakes and in many other parts of the world; and we have others who will discourse to us concerning the three Ages of man as represented by the Stone, Bronze, and Iron implements which he has left behind him. The interest which centres around the buried cities of the world is naturally of a wider nature, for there are records which give us an insight into the lives of those who peopled such cities. The ruins of Herculaneum and Pompeii have an unusual interest attached to them from their terrible end. But other ruined cities have in them plenty to arouse the curiosity and to interest the attention of the antiquary. Of these places, a foremost position must be given to the ruins of Ephesus, which, from its scriptural associations, must plead recognition from all. But the ruins of Ephesus have not been taken care of; we learn that the city is a mass of ruined columns, fragments of arches, broken sarcophagi, and that it is covered with debris. The Temple of Diana, supposed to have been the most magnificent in the world,

has now little to distinguish it from the rubbish surrounding it, although a piece of marble here and there gives, from its exquisite tracery, an idea of former splendour. The Ephesus Exploration Committee are appealing to the public for funds to carry on their work, and it is to be hoped that they will be instrumental in preserving the ruined city from further dilapidation.

Funds are also sought to aid the Society of Antiquaries in excavating what are considered to be among the most remarkable relics of the Roman occupation of Britain. The famous hot springs of Bath afford plenty of evidence that the Romans appreciated their good qualities, for they took the trouble to build round them a massive wall, cased on the inside with lead. Excavations beneath the pump-room have revealed the existence of an old bath eighty-one feet in length by thirty-eight in width, floored with blocks of masonry, and retaining its old lining of lead. There are indications that these Roman baths occupied a large area, the greater portion of which still remains buried beneath more modern buildings.

Mr Carl Bock, the Swedish traveller, whose explorations in Borneo have been brought before the public in book-form, has recently returned from an adventurous trip into Siam, and has visited many districts where no European has previously penetrated. In spite of the cordial protection offered by the king, and His Majesty's command that Mr Bock should carry the royal standard of Siam, the white-elephant flag, the traveller met with great opposition in various parts of the country. The inhabitants were not impressed with a sight of the white-elephant flag, perhaps because they had no idea of the importance attached to such a national emblem. Unfortunately, they showed their dislike to Mr Bock's progress by destroying a large portion of the natural-history collection which he had accumulated.

A St Louis newspaper furnishes some interesting facts in connection with alligator-catching and killing, occupations which give employment to a large number of persons in the south of the United States. The mode of catching the creature is as follows: The young ones are first secured as they play about the hole where the parent is lying. A noose is then so arranged that immediately the animal emerges from its lurking-place, its head is thrust within it. Another noose is then secured to the tail; and the animal is strapped down to a board, and is towed away behind a boat in which her young ones are placed. The hide of a large alligator is worth between one and two dollars, and can be transformed into splendid leather. Besides this, the alligator is valued for the oil which it affords, which, although of an unpleasant odour, is considered a good remedy for rheumatism.

The Report of the department of Agriculture of Manitoba will remove the impression which, for some unascertained reason, has gained currency—that little or no fruit could be raised there. The list of fruits indigenous to Manitoba and the North-west Territory given in this Report is by no means a scanty one. Plums, grapes, cherries, currants; all kinds of berries,

from raspberries and strawberries to the more humble blackberry, flourish here in profusion. The Report also removes another fallacy—namely, that the crab-apple must be the only representative of its class which can flourish in Manitoba. It is pleaded that the same idea was once urged with regard to other States which are now exporting their thousands of barrels of splendid apples to foreign markets.

We have more than once referred to the systems of drying hay, which, according to many reports, have been so successful, but which, according to the judges at the last show of the Agricultural Society, were not thought worthy of the prize offered for the best method. Another mode of storing food for stock is now arousing the interest of farmers; and it offers, both in cheapness and simplicity, no obstacle to a trial of its merits. That these merits are great, seems unquestionable, from reports which have reached this country from the continent and from the United States. The system in question is known as *Ensilage*, and consists in storing green fodder in a specially constructed air-tight pit called a *Silo*. This pit can be of any convenient size, and the best material for its walls is concrete. The materials with which it is stored may consist of every kind of green food used for cattle, excepting roots. These are usually cut into short lengths by a machine, and are then thrown into the pit. The vegetable mass is then covered with planks, and weighted with barrels of sand until its bulk is reduced about two-thirds. A certain amount of fermentation is naturally set up; but it does not appear to affect the flavour of the stored food, which cattle eat greedily. Even in the wettest weather, the fodder can be so stored without risk of failure, if the operation be properly conducted. The *silo* is opened periodically, when the food is cut away in sections, just as a truss of hay is cut from a stack; but if necessary, the opening can be postponed to an indefinite period, as the fodder keeps as well as if it were sealed down in an air-tight tin can. We cannot meanwhile devote space to enumerate the advantages which are claimed for this new departure in agriculture, but intend recurring to the subject in an early number.

Miss Ormerod's lecture, given at the Royal Agricultural College, Cirencester, on 'The Effects of Weather on Insect Life,' contained some interesting observations relating to hibernation. The lecturer pointed out that this phenomenon was a distinct condition from the mere effect of cold, and assumed a constitutional influence, under which, at a certain season, insects instinctively prepared a shelter for themselves. This shelter was specially selected under leaves or stones; and in some cases they prepared a cell to protect their bodies, while they passed into a motionless state, with functions decreasing in power with increase of cold. Though frozen so hard that they could be broken across like dried sticks, many kinds of caterpillars were not injured by the cold so long as they were protected in the shelters which they had selected or made for themselves. The remedy for getting rid of such pests was for farmers to cultivate their land in the autumn, so as to throw out and expose the creatures to the frost, thaw, and wet which followed. The egg-laying places—rank grasses and weeds—should be destroyed;

and it should also be remembered that liming and the use of chemical manures are important factors in diminishing the number of insect pests.

More than forty years ago, there was a strange craft which appeared upon the waters of the Neva. It was contrived by a Russian Professor named Jacobi, and was worked by electricity. Since that time, we have made great strides in electrical science, and the batteries which Jacobi used, with their zinc plates and corrosive acids, have been supplanted by dynamo-machines turned by steam-power. The modifications of Planté's secondary batteries, which have recently made such a stir in the world, have opened up new employments for electricity, and the latest which has been recorded is once more represented by a battery-driven boat. This electric launch was recently tried on the Thames with satisfactory results. It measures twenty-six feet in length, and draws about two feet of water. It has neither fire, boiler, nor chimney; indeed, it is without any visible means of propulsion. But stowed away under flooring and seats are forty-five boxes, containing secondary batteries, which, before starting on its trial trip, were charged by a dynamo-machine on shore. It was calculated that the power stored was equal to that of four horses, and would last for six hours. From the electrician's point of view, the boat is a great success. But in order to find out whether it can compete with steam, we must learn its cost of construction, particulars of wear and tear, cost of power expended in charging the batteries, &c. Of late years, we have learned what electricity can do in the way of storage, in transmission of power, and in giving us light. To successfully compete with existing systems, it must be equally cheap.

One more recent electrical application is deserving of notice, from its useful and practical character. This is a contrivance for stopping a steam-engine by the mere pressure of a button, which button may be at a point at any distance from the engine itself; or there may be numerous buttons at different points, the pressure on any one of which will stop the engine. We need not enter into the details of the contrivance, beyond saying that an electro-magnet acts instantaneously upon the stop-valve of the engine. Its use in large cotton or woollen mills—to which it has recently been applied by the inventor, Mr Tate—is obvious, when we remember how easily some accident may arise, when it may be necessary to stop the works without a moment's delay. Another projected use for it is on board ship, so that in case of impending collision, the captain can himself turn off the steam, without losing time by signalling in the usual way to the engineer in charge. The apparatus is manufactured by Duncan Brothers, 32 Queen Victoria Street, London.

The phrase 'Recommended by the faculty,' has been long a favourite one with clever advertisers, who know well that the majority of persons look upon doctors as magicians and their drugs as infallible. Indeed, the superstition natural to man may be said to show itself principally in the modern belief in drugs; hence the success of any patent medicine which is sufficiently well advertised. But beyond ordinary drugs, there are a number of well-known remedies for various

complaints, which, under the care of garrulous old nurses and others, have been handed down from generation to generation, and frequently employed; but which are neither recognised nor recommended by the faculty. An instance in point is afforded by a means of dressing wounds which has been successfully practised by Dr Neuberg. Two years ago, a labourer presented himself who had sustained, some days previously, a compound fracture of both bones of the forearm. A comrade at the time of the accident had surrounded the limb with a thick paste of peat-mould. Dr Neuberg, on examining the wound, found that it was healing beautifully and without suppuration. The limb was then better fixed, redressed, and the man made a good recovery. The doctor was then led to investigate the properties of this peat-mould, which doubtless had had so much to do with the patient's rapid recovery. He found it to be, as is well known of it in peaty districts, a powerful antiseptic, and to take up nine times its own weight of water. Its soft nature allows it to be placed in bags in required positions on the body, and it has the further advantage of being cheap. This peat-mould, the virtues of which have thus been transmitted to us by a labouring-man, is likely to prove a most useful agent in dressing wounds.

At the Paris Academy lately, some curious and interesting notes relative to sulphur-fumes as a preventive of malaria were read by M. d'Abbadie. He stated that some elephant-hunters from plateaux with comparatively cool climate can go into the hottest and most deleterious Ethiopian regions without being attacked by fever, and that they attribute their safety to the daily practice of fumigating their naked bodies with sulphur. He also quoted cases where sulphur-mines were free from disease, whilst the inhabitants of villages near at hand were constantly attacked by fever. It has always appeared to us that sulphur as a curative agent has been too much neglected in our own country.

The approach of the burglar season has been as usual ushered in by many suggestions for the protection of nervous householders. Among recent contrivances for confounding the schemes of housebreakers, a lamp has been invented which acts as a kind of danger-signal to the police. It is connected with a battery and wires to any doors or windows which need protection, and so long as such apertures are shut, the lamp burns with a white light; but directly an attempt is made to force an entrance, a red-glass disc falls before the lamp, and tells the passing policeman that there is something wrong. Our own opinion is that a good loud-tongued electric bell would be far more serviceable. A burglar who found that by his act of forcing a window he had set up an alarm which would wake the entire household, would most certainly make good his retreat without delay. The old-fashioned plan of fixing a common bell into the shutter-bar is by no means to be despised.

At the Sanitary Exhibition at Newcastle, the Richardson gold medal for 'an exhibit of pre-eminent merit' has been awarded to Siemens's regenerative gas-burner. This burner, by complete combustion, is said to save fifty per cent.

of gas, while at the same time it does not vitiate the air of the place in which it is used. At the same Exhibition, some very successful smoke-consuming stoves were shown, which have been adopted in some lead-works at Newcastle, solely for the good of the town; for where manufacturers only pay about three shillings per ton for their fuel, there is little need to employ such contrivances solely on the score of economy.

It is a curious slur on our boasted civilisation in this nineteenth century, that old and well-worn superstitions should crop up from time to time, and should receive a vast amount of credence from persons whose minds are not supposed to be unhinged. Ghosts, spiritual manifestations of the Brothers Davenport type, second-sight, and even witchcraft, occasionally show a vitality which is extraordinary. The divining-rod is the last exhumation of this character. Legendary lore as to the efficacy of a twig, balanced between the fingers of certain gifted persons, is common to the traditions of every country. The twig, or divining-rod, is supposed to point out by its movements the exact place of buried treasure, the place to bore for water, the occurrence of mineral lodes, and it will also help in pointing out the whereabouts of a murderer or other felon! A certain Madame Caillavah is said to have this gift of 'working the twig,' as it is vulgarly called; and it is reported that under the auspices of the French government, she is about to try her powers above the pavement of St Denis, in search of buried treasure. If the report be true—and we must assume that it is so from an article in the *Times*, and the curious correspondence which it has called forth—we can only say that the enterprise is not altogether creditable, and we may probably look for an ending to it which will be quite as disastrous if not so amusing as that which happened to Dousterswivel in the *Antiquary*.

The island of Cyprus has the unenviable possession of a description of locust found nowhere else. Its vast numbers raise it to the position of a plague, which, like that of old Egypt, would eat up every green thing in the land, if measures were not taken for its destruction. The government reward of what would be in our currency one halfpenny a pound for locust-eggs, which was trebled as the eggs became scarcer, resulted in the collection of nearly fourteen hundred tons in seven months. The payment of these rewards, together with the expense of constructing traps and screens to intercept the insect army, cost altogether more than one-fifth the total revenue of the island.

Some months ago, we referred to a new method of blasting coal by the heat and expansion caused by wetting cartridges of compressed lime. The system was then merely in its experimental stage; but having now been tried with the greatest success in various collieries all over the country, it may be looked upon as an accepted improvement in coal-working. Its first and most obvious advantage is its absence of flame; but other benefits accrue from its adoption. While the usual mode of blasting with gunpowder or dynamite breaks up the coal into small pieces, the gradual action of the new agent pulls it down in huge blocks. Large coal is, roughly speaking, nearly double the value of small. It is better for the consumer, for the carrier, and particularly for the miner, for

he is paid in many places according to the quantity of large coal which he gets. Ten thousand tons of gunpowder and dynamite are consumed annually in the British collieries. We can now look forward to the time when those dangerous agents will be replaced by the mountain limestone, which can be had in plenty all over the country.

We have lately seen models of the Hallidic Cable Tramway system, by which hilly streets can be mounted as easily as level roads. Highgate Hill, at the foot of which the existing tramways come to a discreet stop, is the first London road upon which the tramway is to be tried; but it has already won favourable opinions and large dividends in San Francisco and Chicago. A travelling wire-rope one inch in diameter, worked by a stationary engine, moves in a groove beneath the roadway. Projecting below the tramcar is a clutch, which, by turning a handle, grips the moving rope, and the car is tugged up hill by the distant engine. The system is worthy of attention, if only for the sake of the poor horses which are urged to drag up hill, burdens that are almost beyond their strength on level ground.

TWO CORBIES.

In a cliff not half a mile from my early northern home, a pair of ravens every summer built their nest. They had been there no one knew how long. The nest was about midway between the top of the cliff and the sea at its base, being placed within a small cave on the face of the precipice, where it was safe from all invaders. The young ones were insatiable; and as their parents liked to see them well fed, it occasionally happened that a hen or duck might be found amissing from the farmyard.

In the same cliff, but nearer the water, and just over the mouth of a cave, a cormorant—or shag, as we call the bird—built her nest on an open shelf, so that we could see the eggs from the top of the cliff. The male raven had seen them too, and resolved to transfer the eggs to his nest. But this did not prove to be so easy as it had looked; for the shag, with her long neck and hooked bill, defended her property to the last. The raven did not like to come to close-quarters with her, but sought to gain the eggs by art and perseverance. He would alight on one end of the shelf, and sidle up to the shag as near as he dared, picking at the outside material of her nest, and thus provoking her to make a dive at him, so as to draw her off the eggs. That gained, he would spring to the other side of the nest to seize an egg. But the shag would wheel round and meet him with open mouth, sometimes ruffling a feather out of him. This went on now and then for several days, till one day the shag got a firm hold of him, and both tumbled over plump into the sea. Unfortunately, the shag lost her hold as they fell into the water, or perhaps she had to let go; and the raven getting on her back, was soon on the wing. The shag by-and-by got up also; but ere she could reach her nest, the raven, drenched as he was, had removed the eggs, not to his nest, but to a short distance, from which he could carry them away at his leisure.

The poor shag had no avenger, and there the matter seemed to terminate. But one night shortly after, a thunder-storm came on from the direction of the sea in front of the cliff. The rain was heavy, and the thunder loud; and next morning the 'corbies' nest with their family had been washed away. I saw the bereaved parents sitting on the top of the cliff, each a picture of desolation, especially the mother-bird.

After a day or two, we began to hear of sheep being destroyed by some strange agency, and then we were told that it was the work of the 'corbies.' This did not seem credible; but more than one person could testify to having seen the birds at the work. One morning, a choice sheep of mine was found destroyed; and I started at once with a gun to shoot the destroyers. But they knew what the weapon meant; and for eight days, early and late, my efforts were unavailing. At last I killed a raven, though whether one of the destructive birds I could not be certain; but from that day, the sheep were safe, and the birds never again seen.

During nine days, these two ravens killed no fewer than thirty strong full-grown sheep. Their mode of action was discovered to be as follows: The mother-bird would fly on to the sheep's face, fixing her claws below the eyes, and seizing the top of the head with her bill, would flap with her wings and scream frightfully. Her mate, ever near, would, when the sheep was so fixed, get on her back and dig a hole through to the kidneys. The sheep, distracted and blinded, would sometimes run over the cliff, sometimes into a ditch, and sometimes fall down exhausted. In no case were the ravens known to leave their victim until life was extinct, snapping the windpipe to that end, when other means failed; and in no case were they known to feed on the sheep's carcass. The loss of their young ones seemed to have excited them to madness, and the sheep seemed to be the only living thing on which they could vent their rage. Had demoniacal possession been a present-day affliction, I should have regarded these ravens as a case in point.

OCCASIONAL NOTES.

PORPOISE LACES.

WE have received, says *The Boot and Shoe Trades Journal*, so many requests for enlightenment on this class of goods, that we believe the following result of independent investigation into the matter will be welcomed by most of our readers. It may perhaps cause surprise to some to learn that there is not, and never has been, such a thing as a real porpoise lace; that is to say, a lace cut from the animal so well known on our coasts as the porpoise. The skin of this creature has been found to be perfectly useless when tanned and dressed; but notwithstanding this, the name has obtained universal currency ever since these goods were first introduced into the English market. It is from the skin of the Beluga, or white whale, caught in the northern seas, that what are commercially known as genuine porpoise laces are cut, and,

so far as we know, they cannot, when properly prepared, be surpassed for wear and strength. The imitations are, however, so various, and manufactured so closely to resemble the 'real' article, that they may well deceive every one but an expert in the trade. The majority of these imitations are, we are told, made from calf-skin—both English and French, although some, especially the cheaper kinds, are cut from buffalo hide, kips, &c.

In order to get a good imitation of the smooth surface of the porpoise, the grain of the calf-skin is carefully removed, or split, during the process of dressing, after which a finish of black with a good surface completes the process, when they are ready to be cut up for 'real' porpoise laces. In order, however, that these deceptions may be detected, our contemporary gives various tests, by observing which the purchaser need not be led astray. The chief of these tests are—(1) The genuine article (Beluga laces) is smooth on both sides; while the imitation is rather rough on the flesh side. By taking a lace between the finger and thumb of each hand, about one inch apart, and 'wrinkling' up the grain side, the grain of the calf or other skin will readily be seen, if the lace is an imitation. (2) The substance of a real lace is usually even from end to end; while the imitations are often lumpy or uneven, and one end is nearly always thicker than the other. (3) The real lace is always cut narrow, so as to reduce the cost; while the imitations are generally cut wide, so as to obtain strength. A wide 'porpoise' lace must always, therefore, be regarded with suspicion. (4) There is usually a difficulty in obtaining the imitation laces in the longest lengths, say fifty-four or sixty inches, because the parts of a calf-skin which may be used for this purpose do not usually run that length. (5) One other infallible test is, that the real lace is much more elastic than the imitation.

On the whole, it is suggested as a safer plan to purchase the laces in the 'russet,' as in that state the chances of deception are reduced to a minimum, very ordinary judgment sufficing to distinguish the real from the imitation before they have had the 'blackening' process applied to them.

THE MOONS OF MARS—A STRIKING COINCIDENCE.

The following likeness between scientific results as stated by a practical astronomer, and a happy guess as thrown out long before by a satirical author, may be regarded as a matter of more than merely literary curiosity. In the work of Mr Proctor, entitled, *Flowers of the Sky*, there occurs the following passage with respect to the planet Mars and its moons: 'Astronomers have long examined the neighbourhood of Mars with very powerful telescopes in the hope of discovering Martian moons. But the hope had so thoroughly been abandoned for many years, that the planet had come to be known as "moonless Mars." The construction, however, of a fine telescope which has been mounted at Washington, with an object-glass twenty-six inches in diameter, caused at least American astronomers to hope that after all a Martian moon or two might be discovered. Taking advantage of the exceptionally favourable opportunity presented during the planet's close approach to our earth in the autumn of 1877,

Professor Asaph Hall, of the Washington Observatory, paid special attention to the search for Martian moons. At last, on August 16, 1877, he detected, close by the planet, a faint point of light, which he was unable to examine further at the time—to see if it behaved as a satellite, or as one of the fixed stars. But on the 18th he saw it again, and determined its nature. He also saw another still fainter point of light closer to the planet; and subsequent observations showed that this object also was a satellite. During the next few weeks, both the moons were observed as closely as possible, in fact, whenever weather permitted; and the result is, that we now know the true nature of their paths. The distance of the outer satellite from Mars' centre is about fourteen thousand three hundred miles; from Mars' surface, about twelve thousand miles. The inner travels at a distance of about five thousand seven hundred and fifty miles from the centre, and about three thousand four hundred and fifty miles from the surface of Mars.'

Now read another extract from a book, namely, Dean Swift's *Voyage to Laputa in Gulliver's Travels*, published a century and a half before this discovery was made, and the similarity between the number of the satellites and their distance in the satirical and the scientific treatises is certainly very striking. 'They [the Lilliputians] have likewise,' says Swift, 'discovered two lesser stars, or satellites, which revolve about Mars, whereof the innermost is distant from the centre of the primary planet exactly three of his diameters, and the outermost five; the former revolves in the space of ten hours, and the latter in twenty-one and a half; so that the squares of their periodical times are very near in the same proportion with the cubes of their distance from the centre of Mars; which evidently shows them to be governed by the same law of gravitation that influences the other heavenly bodies.'

THE DIRGE OF THE LEAVES.

DEAD or dying,
Our funeral song the winds are sighing !
Dying or dead,
The rain-sodden earth is our chilly bed !
When summer days were long,
The warm air quivered and thrilled with song ;
In full green life we waved to the wind,
Now withered and red we are left behind.
All dying or dead,
Our farewell is said,
And we flutter to earth and rot into mould,
Or pave the dark glades with fretwork of gold.
Our death is but change ;
Through paths new and strange,
The force that is in us works on to its goal :
For in us, as in all things, moveth a soul
Which dies not, but lives,
And ceaselessly gives
The life-breath of being to that which was dead,
Till the violet springs where the leaves were shed.

OXFORD REMINISCENCES.

VACATION.

IN St Martin's, term always ends on a Saturday. A few men may get permission to 'go down' on Friday evening; but it is on Saturday that the college is properly said to 'go down.' There is no public gathering of the tutors and students. Each student goes privately to his tutors and to the Dean; makes with them arrangements about the 'reading' to be done in the vacation; says good-bye; and goes off when and how he likes, provided he go on that day. Unless he have particular permission, he cannot remain in college or in Oxford even for one night. His name has been taken off the 'kitchen list; and after that, he can neither have anything from the kitchen or buttery, nor can he dine in 'hall.' He says good-bye to his friends; pays his 'scouts;' tips the porters, the messenger, and the boot-cleaner; and goes off in a cab with sensations of his own.

Usually about a dozen men, each by special permission given, remain 'up' in college till Monday. But it is vacation. There are no chapels. The college bells do not ring. In term, there is an early bell at seven o'clock, another at half-past seven, and the chapel bell at eight. These are henceforth silent till term begin again. After Monday, two or three men may still linger in college, each with his own reason for being there; and they disappear one knows not when.

At the end of the October and summer terms there are 'schools,' that is, university examinations. Men in for 'schools,' of course remain in residence so long as they need. Sometimes one solitary man is thus left, with the college all to himself. But that is not often the case. At the end of the Lent term, there are none but private college examinations; and these are held in the last week of term.

The great university examinations come in the summer term. Men who are 'in' for any of these, sometimes think it better to remain in

residence during the whole of the Easter vacation, to read in unbroken quiet; and for this, permission is readily given by the tutors. Such was my own case.

About a dozen men dined in 'hall' on Sunday; on Monday, about half-a-dozen. On Tuesday, we received a message from the cook that dinner would be laid that evening and throughout the vacation at seven o'clock, as usual—in the lower lecture-room in the Fellows' 'quad.' When we came there, we found ourselves to be four only—all staying up to read. I had not made the acquaintance of any one of the other three before this; they were all 'senior' to myself. But thrown together in this way, we had at once a necessary supposed acquaintance. We four undergraduates, we and the college porter at the lodge, had St Martin's all to ourselves. Kaimes of Aberdeen was the most 'senior' man; he lived in the New Buildings. Graves and Cole both lived in the front quadrangle. I lived in the back quadrangle, where the library is, and under the library at the foot of the chapel tower. If any of the 'dons' were in residence that vacation, I know not; I saw no sight of one.

The quiet of the place became profound. All day long no foot broke the silence except at breakfast and lunch times, when the 'scout' came in, and was gone again. In the city, like change had come. During the first few days, an unmistakable cab might be seen taking some loiterer with his luggage away to the railway station. But the High was deserted. It was a new sensation. In the morning, no bells rang from chapel towers. The city clocks were like police in the deserted days, and were heard now over half the town. I awoke each morning with feelings such as a schoolboy has when he awakes at home on the first mornings of the holidays. The accustomed sounds were absent. It was not as if you were at home in the country, but as if you were in the solitude of a lonely moated grange in the silent mediæval time.

The weather of that spring-time was very pleasant. The days were bright; or they were

clouded only with an even unmoving fleece of cloud; and the air was mild and sweet. St Martin's is by the meadows. Beyond the green expanse of grass are the elms of Christ Church; and beyond the elms are the Christ Church meadows. Through the trees and across the meadows, you can in the sunlight catch the gleam of the river. There were at that time in Christ Church elms many wood-pigeons. There were rooks also about there; and jackdaws in our chapel tower. From the elms, the sweet voices of the doves came across to St Martin's. The quiet and the sweetness of the place had an influence on us. There was a drowsiness over the world. The inhabitants who toiled had departed; and the place was enjoying its Sabbath. Even the scouts, who are quite unsentimental persons, yielded to that power. It was a Sleepy Hollow; and they were its new Rip Van Winkles. They came late in the morning, went about their work leisurely, and were gone again. The morning sun lit up the tower, and crept down the western side of the quadrangle while the other sides lay in cool shadow. My rooms were on the ground-floor, under the library. One window looked out into the quadrangle. Its stone window-sill is worn by the feet of men who have lived there, and for idleness were used to come in and go out by the window. The back windows and the window of my bedroom looked into the chapel close, where there is smooth-shaven grass under shrubs and young trees. Beyond the close is the ivied wall of the college of St Botolph.

The sunlight came in through the window with the footworn sill, and lit up with a morning light the breakfast-table, always laid when I chose to come to it. But it came not so welcome there; for in his room at breakfast, the coffee-drinking student cared more for the brightness of firelight and an artificial cheerfulness. I sat down to my coffee always with a relish for it; and in St Martin's kitchen they know, or at least knew at that time how to make good coffee. We were the lotus-eaters of the cloister. We seemed to be giving

Our minds and spirits wholly
To the influence of mild-minded melancholy:
To muse and dream and live again in memory
With the old faces of our infancy.

At breakfast-time, the college porter came in with the letters, if there were any—though that was not often. He was respectful, monosyllabic. As he came and went on the flags, under the long arched corridors, his steps echoed remotely; and this echoing made the corridors seem longer than they actually were. When he went back, one could not but follow his echoing steps till they died away behind the chapel. When I was breakfasting leisurely, as was usual with me, one sunny morning, I heard steps, and thought it to be the porter's. It proved to be Kaimes, coming through the other corridor at the other end of the library. He came in. He was smoking. With the slight apology that one as briefly waves down, he continued to smoke, and lay down on my sofa. With one leg high in air, and over the knee of the other, he gazed at the ceiling through the little blue smoke-wreath.

'It's a strange place this—in vacation,' he began, after smoking a while in silence.

I assented.

'Do you know,' said he, 'I begin to find it awfully hard to get any reading done.'

'I quite believe you,' was my response.

He was gazing dreamily at the ceiling; and after a time, said in soliloquy: 'Very strange!' So he smoked on, and finished his pipe; and went out and across the quadrangle to his own rooms. Half an hour afterwards I saw him cross my quadrangle in his boating flannels. He called out to me that he was going down the river to Abingdon to-day; he couldn't read.

Each morning I took down my books and read as became me. There was nothing to disturb me. And so the morning passed away. Robert, my scout, came in at one o'clock with my lunch. I put away my books; the morning was over.

In college, the men always have breakfast and lunch in their own rooms. They all dine together in the evening. After lunch, I obeyed my mood. To obey my mood was oftenest to obey my habit, and go off to the upper river. The 'upper river' is that part of the Isis above the city. From St Martin's to the barges on the upper river is a walk of two miles. One hires a boat at the barges. From the barges to Godstow is a row of two miles up the river. On the eastern side is the wide level Port Meadow; on the western side, moist fields shaded by elms, and here and there by the water-courses, by pollard willows; and beyond, the wooded hills of Wytham in Berkshire.

The meadows and banks were already green again; and the trees had a powdering of new foliage. The cuckoo had come. The water had lost its harsh winter colour, and had again the light and gleam of the coming summer.

Godstow Inn, the landing-place of all who ply on the Isis, was deserted. I had the place all my own. I loitered about the landing-place; turned into the idle inn, and tasted the ale in melancholy silence. I wandered across the meadows to Wytham Mill; leaned there on the footbridge day after day, or went round by Wytham village. There were nightingales in the woods of Wytham Hall; but I heard none. The cuckoo I heard always. There was no ill omen for me; for I sought no success in love, and could have no failure. And so, breathing the air of that old-world place, I came back by Godstow Priory, from which the life and glory had departed three centuries gone. I untied my boat, and floated down the river homewards. The west was red; the trees were motionless on the banks; and in the underworld as reflected in the stream the trees also were motionless and the clouds red.

They were indeed halcyon days; not joyous—and yet there was joy; not popular, as the days that come after in the golden summer term; heavenly, for they had for me intimations of a world on the borders of which I became more conscious of living. How quietly alone did I walk home over the smooth meadow to the town. On the meadow, the town boys were already, with insufficient last year's bats, playing irregular cricket. To-day was as yesterday; and to-morrow will become as to-day. Those yesterdays and to-days are all over long ago.

We dined at seven o'clock, in a lecture-room in the dons' quadrangle. Kaimes being the senior man, had an arm-chair at the head of the table.

We had been exiled from 'hall' to dine here—from the hall, with its high open roof of oak, with its wainscot of oak, all round which were the armorial bearings of founders and benefactors, with its portraits of the founder and of the mightiest of the alumni, with its ancient hearth, the dogs of brass, and the mighty embers. We had been exiled from the long oaken tables, from underneath which looked out of the carved oak, heads of mediæval spirits. We had been driven from the lectern at which the junior scholars pronounce the Latin grace—the lectern was a grace in itself. We were in exile, eating our dinner in a lecture-room, at the tutor's writing-table. The lecture-room was felt to be a grievance. In the background was a dreary array of students' examination desks and cane-bottomed chairs, all covered with dust. Through the windows we had an outlook across a little grass plot at blank walls where the kitchens are. But they still sent us the ale in silver pint-pots. We were spared the indignity of drinking college ale from tumblers. Mighty is the ale of St Martin's College in Oxford. Reader, thou hast not quaffed a mightier liquor of malt. It can be drunk from silver pots alone.

We dined leisurely. Kaimes was not a man of much conversation; but Cole always had plenty to say. Graves seldom dined with us. He was seldom seen by any one. So the evening darkened in the low-ceiled lecture-room. How much more touching had it been in the gloom and grandeur of the Gothic hall. But it was the same gloom of evening; it made us quiet, perhaps sad. We rose together, and each one went off to his own rooms. They were shadowy enough—lighted only by the red firelight. The scout set the kettle on the fire, set the tea-things on the table, and withdrew for the night. I made tea, and sipped it in the firelight. There was no sound, no voice, only the college clock telling the quarter-hours. Once or twice the bells of Magdalen rang peals, faintly heard down in our dark solitude. Once or twice 'the merry Christ Church bells' chimed their 'one, two, three, four.' Thus was each evening spent—till the time came that I cared to light my lamp and begin to read.

I usually read on till two or three in the morning. Often I did not hear the clocks strike at all. Sometimes, in a pause, I heard the clocks strike twelve. Then, in a pause again, I could hear them strike the hour of two or of three; at which I went off to bed. There was a ghost in the library, they said. I thought of it. But my heart was too sophisticated perhaps to fear or to hear its mysterious tread. One did not always light one's lamp to read for the 'schools.' *Non scholæ sed vitæ.* But it was not for life either. It was sometimes to read in the poets' sweet pages—to read slowly over again the dear familiar poems.

Thus I followed with the inward eye the images of things one after another, till the moving time stood still, and I was left

Sole sitting by the shores of old romance.

There were moods too, in which one must write something—'prose or worse;' letters that were eventually not sent to the post—letters also that were not meant to be sent. And so one left

them unfinished, left the problems unsolved, hopes unrealised—though one felt little of it then. In the early morning, the sun came in through the window with its footworn sill of stone. The student lay thereby asleep—in dreams. The sun looked on the unfinished works of the man! Gentlest of critics! Where in all the world shall be found another so gentle, and yet so truthfully severe withal?

The last week of the vacation came at length. Then entered the men-mechanical bearing the signs of their profession—carpet-beaters, chimney-sweeps, glaziers, cabinet-makers. The scouts were about in college all day long. Our solitude was invaded. No council of war was held by the four inhabitants, but each one independently evacuated the place. I turned out after breakfast, and wandered to Ifley, or to Shotover, or into 'New' or 'John's' gardens—there to read a novel.

I always came back by the High. There too was a beginning of activity. One saw again unmistakable cabs with the first arrivals—harbingers of the coming term. They were men of other colleges, and unknown to me, yet to whom I was bound by a something that gave me involuntary pleasure. There came the anticipation of meeting one's friends, of experiencing again the pleasure of society, and the pleasure of the activity of the golden summer term.

We went to sleep on Friday night. We had read the last page of that chapter of our lives, and turned over the leaf. The Vacation was ended.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

BY DAVID CHRISTIE MURRAY.

CHAPTER XLVII.—'MISTER,' SAID HIRAM GRAVELY, 'YOU PAID ME LONG AGO. YOU ENLISTED ME WITH THIS HALF-SOVEREIGN.'

IN an hour's time or thereabouts, Mr Search arrived in a frock-coat, tightly buttoned, a slim tall hat, and very accurately fitting boots and gloves. His solemnity and dignity were tremendous. The solemnity remained until he took his leave—the dignity vanished when he crossed the threshold and had once shaken the hostess's hand, and nothing remained of it but that serious cordialness and beautiful sincerity which mark the good American.

In the course of the evening, Mr Search was somehow beguiled into a narration of certain of his experiences of the world and of men and manners. Little Mary sat and worshipped him; and the old lady was filled with wonder and admiration. It appeared that he had been pretty nearly everywhere and seen pretty nearly everything, to the limited experience of his listeners. Mrs Norton confessed him a remarkable man, and was known to say of him afterwards that he spoke English beautifully. It would seem that she regarded it as being a tongue originally foreign to him. Hiram left early, since he had a two miles' walk from the railway station, and reaching the hall, found his employer waiting for him.

'Search,' said Gerard, 'I want to speak to you.' Hiram stood quietly before him; but Gerard arose and began to pace the room with unequal steps. By-and-by he paused, and stood straight before Hiram and looked him in the face. 'I have it on my mind to say something very serious,' he said deliberately. 'It is not easy to do it. Hiram Search—shake hands.' Hiram shook hands, with his gaze fixed on Gerard's. 'You and I know from what you saved me. I can never pay you for it; I shall never want to feel that I have discharged the debt. But will you let me pay you in part?'

They still gripped hands, and looked at each other steadfastly.

'Mister,' said Hiram gravely, 'you paid me long ago. You enlisted me with this half-sovereign, touching it with the thumb and finger of his left hand as it hung from his watch-chain. 'It wa'n't the gift—it was the way of it. I shall take it kindly if you will never speak of that night again.'

'Will you let me try in part to thank you?'

'I'd rather it rested at this,' said Hiram. The grip he gave the hand he held at the last word, told Gerard all he meant.

'That can't be,' said Gerard. 'In the first place, we are not going to part, I hope, but you are out of my service from this hour.'

'No,' said Hiram.

'Yes,' insisted Gerard, with a husky laugh. 'I discharge you. And now, you true friend and honest man, will you do me the very greatest favour I can ask you? Will you go away and get married and be happy, as you deserve to be, and'—with a hurried shamefacedness which made the gift most moving and manly and gracious—'will you take this as a wedding present from a friend?' ('This' was a strip of paper addressed to a great banking-house in London.)

'Mister,' said Hiram coldly, 'this takes the shine off everything.'

'You can't refuse me,' said Gerard. 'You'll take it to please me. From a friend, Search—from a friend. And to a friend—the best I ever had. Good-night.' He shook Hiram hurriedly by the hand again and left him.

Hiram dug the slip of paper sulkily into his waistcoat pocket and stood for a moment immersed in unpleasing emotions. 'I think it's meaner,' he said at last, rousing himself, 'to refuse to take it, than it would have been not to offer it. I wish there was no such thing as money in the hull wide world. Freezes everything, it does.' But he ended by accepting the gift; and when the natural reluctance he had at first felt was over, he experienced a wonderful glow of pride and satisfaction in it. He packed his traps, and left Lumby Hall next day; but before he went, old Mr Lumby sent for him and bade him good-bye and shook hands with him. Hiram's bewilderment at this unexpected proceeding was not allowed to last.

'My son tells me, Mr Search,' the old man said with quavering dignity, 'that you and he have an unusual tie between you, and that you saved him from a great peril, by unusual courage and resolution. My son is very dear to me, Mr Search, and I am grateful to any man who has done him a service.'

Mrs Lumby thanked him also; and Milly gave him a hearty farewell. The women had some guess as to the nature of Hiram's service, though even they were miles away from comprehending the real value of it; but Gerard's father had no suspicion. The head-groom was a great chum of Hiram's, and pretended business in order to have the fun of a drive with him into Brierham. Their way led them by the road a hungry tramp had travelled once upon a time; and when they reached the brow of a certain little hill, Hiram got out and sat upon a certain stone there, and smoked in solemn silence for a time, and then walked on beside the dogcart to a gate where he paused again. He took the half-sovereign in his hand and looked at it, on the spot where it had first come into his possession; and then, with a heart full of quiet thanksgiving, he climbed back into the dogcart and left those scenes behind him.

Nothing less than a marriage by special license would content him; and he and Mary were married by special license accordingly. And when the ceremony was over, by way of wedding-tour what should the quaint creature do but buy a dogcart and a noble horse, and drive with his happy little wife along every foot of the ground he had wandered over on his way to London! He told her the whole story. He showed her the public-house where he had practised the art of chair-caning. He even went inside and sat upon one of the chairs his hands had caned, and drank a glass of ale so seated; and the landlord, not knowing him from Adam, was mightily obsequious to him. And I do not think there was ever a happier wedding-tour than that simple journey afforded. The September lanes were lovely all the way, and the wedded pair had splendid weather. They drove right into London, and Hiram drank a bottle of champagne with that official of the Omnibus Company who had engaged him and discharged him; and dined regally with his wife at the restaurant where he had served as waiter; and paid a pious pilgrimage to the house where he had first met Mary. Then after a month amid the gaieties of the Metropolis, he sold the horse and the dogcart and went down to Brierham; and on the outskirts of the little town he bought a cottage, and there lived in peace and plenty and homely contentment, not spending more than half his income. At this date, he is the father of a boy, whose name is Gerard, and whose godfather is no less a person than the master of Lumby Hall. Hiram himself is an ardent politician, and is counted a safe draw at any political meeting. He fought the last general election with great valour in behalf of a Radical candidate against Mr Valentine Strange, who secured the seat in spite of him. His invective against the policy of Lord Beaconsfield is said to have been remarkably vivid; and many of the leaders of the *Brierham Morning Star* at that stirring period were believed to have been inspired by him.

Good-bye, Hiram! Rugged, gentle, generous, brave, farewell! Ill as I have drawn you, you may stand as a type, which has been limned better many a time by abler hands, of the splendid manhood of the West—a manhood independent, valorous, and kindly; racy of the virtues of freedom; without fear and without reproach.

In following Hiram Search to say good-bye, I have run too fast forward, and have anticipated somewhat. Come back again for but a little while to scenes and people grown familiar.

LOWER PLANT-LIFE.

POTATO AND SALMON DISEASE.

THAT there exists a literal universe of living beings all unknown to the ordinary observer, has long been a fact familiar to those who work with the microscope. Not merely within the compass of a water-drop do they find varied forms of animal and plant life, but even preying upon low animals and plants, the zoologist and botanist discover still lower forms of life. Of late years, considerable advances have been made in our knowledge of these lower organisms, and the fields of lower plant-life are especially being investigated by busy workers, who are year by year contributing additional curious facts to our botanical store. It may form a suitable inquiry, by way of preface to a brief study of these organisms, to ask: 'What is a lower plant?' Popular conceptions of plant-life will hardly assist us here, because the vast range of lower plants lies outside ordinary ken. But we may fortunately find known plants to lead us to the lower deeps of vegetable existence, and to initiate us easily into some of the mysteries of life in its humbler grades.

Botanists are accustomed to divide the plant-world into two great divisions, one being that of the 'Flowering' plants, and the other that of the 'Flowerless' plants. The ordinary flowering plants, which are of higher nature than their flowerless neighbours, are exemplified by the common denizens of our woods, fields, and gardens. The buttercup, lily, wallflower, fuchsia, and pelargonium, are as natural examples of the first group as we could wish to see. The flowerless group is, however, just as familiar to us—at least in its ordinary representatives. Thus the fern, mushroom, moss, and seaweed, never produce the conspicuous flowers seen in common plants, and they illustrate accordingly the flowerless section of the vegetable kingdom. The absence of flowers is further discovered to be associated with a curious life-history. The development of a fern or mushroom, for example, is a very different process from the early growth of a lily or an oak-tree; and as the lower plants at large agree with the fern in the essential details of their development, it may be well to select that familiar plant as an illustration of lower plant-life in a phase intimately related to the subject of this paper. When the back of a fern frond or leaf is examined in the autumn-time, a large number of little brown bodies, called *sori*, are to be noticed. These *sori*, on careful examination by the aid of the microscope, are duly discovered to be each a collection of curious little cases or capsules which may be named 'spore-cases'; the latter, as they exist in a cluster on the back of the frond, being covered by a membrane to which the botanist gives the name of *indusium*. Each spore-case

is similar in structure to its neighbours. It usually consists of an oval, flattened body, around one edge of which runs a very prominent ring, which gives to the whole spore-case somewhat the appearance of a helmet. Inside the spore-case are contained the *spores*. In the early history of the spore-case, it was occupied by a single central cell; but this cell gave origin to others, so that when the case is ripe, it may contain some sixty-four or more spores, which float in a fluid that fills the case. Each spore simply consists of a little case containing a speck of living matter or 'protoplasm.' Under the microscope, no structure or texture is discoverable in the spore; yet, as in the undeveloped egg of the animal, the living matter of the spore contains potentially the substance of a new plant, and is adapted and intended by nature to reproduce, through development, the form of the parent-organism.

When the due season arrives, the spore-cases on the back of the fern-frond are uncovered by the shrivelling of the *indusium* or covering. Then each spore-case, on its own account, is fitted to discharge the spores it contains. The ring already noted as surrounding the case in part, now begins to contract—a result probably due to the drying of the case—and the case itself is thus burst open. The sudden action of bursting, causes the spores to become dispersed or scattered in all directions, and those which fall into damp earth at once commence their new existence. For now, the spores are seen to develop the energies which belong to the 'seeds' of other plants; although, as we shall observe, they differ widely in the results of their germination. When we plant the seed of a pea or bean, for example, the most natural of expectations leads us to hope that a pea or bean will grow up directly therefrom. And in the case of all ordinary plants this expectation is duly realised. Not so in the fern, however; for here, the spore which has found suitable surroundings in the moist earth, gives origin not to a young fern, but to a curious little leaf-like body, known to botanists as a *prothallus*. No trace of the fern is to be seen in the structure of this comparatively simple leaf which has sprung from the spore, and which seems in itself to represent the end of the spore's development.

To complete the cycle of development, and to return naturally to the fern-generation with which we started, requires the further study of the spore and its resulting *prothallus*. It may be meanwhile remarked that, as a rule, the number of spores produced by a single fern is very great. It has thus been calculated that in the male shield-fern (*Aspidium filix mas*), one frond bore ten thousand and sixty-two collections of spore-cases or *sori*, from which no fewer than one hundred millions of ripe spores would be produced. Assuming further, that an ordinary fern-plant would produce ten fronds or leaves, the total number of spores produced by the whole plant would be little short of one thousand millions.

We left the leaf-like *prothallus*, produced from the spore of the fern, springing from the damp earth into which the spore had fallen. The *prothallus* itself is the result of division of the cellular structure of the spore, and it finally

appears before us as a beautiful green leaf, heart-shaped in some fern species, but rounded in others. From its under surface, numerous root-hairs or rootlets arise, and these fix the prothallus in the soil, and likewise absorb nourishment. Now, it is among these root-hairs that certain structures of the highest importance in fern-history begin to be developed. The structures in question correspond in a measure to the *stamens* and *pistil*, or reproductive organs of higher plants. The bodies growing on the fern-prothallus are of two kinds. In one of them are produced numbers of curious little moving bodies, somewhat resembling animalcules; and in the others are produced certain cells, which apparently perform the part of 'seeds.' Thus sooner or later, the contents of the two bodies come together; contact of the little moving bodies of the one set of organs with the little cells of the other takes place. As a result, each cell develops into a little body, which soon begins to show a likeness to a young plant. The whole process which takes place in the prothallus too forcibly suggests the fertilisation of ordinary plants, to escape notice; and just as the young plant arises from the fertilised seed, so the young fern springs from the fertilised cell of the prothallus. Then the young root strikes downwards into the ground, whilst the first leaf of the new fern rises into the air, and the underground stem in its turn becomes developed. The outlines of the fern being thus completed, ordinary growth and multiplication of fronds will convert the young plant into the likeness of the adult, which will produce spore-cases and spores, and thus repeat once again this curious history.

As a rule, each prothallus gives origin to a single fern only, and for a time the prothallus will remain attached to the young fern, as if it was intended by nature to discharge towards the young plant the functions of a nurse; just as the 'seed-leaves' of a higher plant nourish their young. But what is of importance to note in the foregoing history, consists in our plainly recognising the fact that the fern has thus a double development. An 'alternation of generations,' as it is called, is clearly represented in its history. The ordinary fern produces a first 'generation,' consisting of the prothallus and its reproductive organs; and these in turn produce a second 'generation,' consisting of the fern itself. Something similar to this occurs amongst animals, as, for example, amongst the zoophytes, that grow in the likeness of plants, and incrust the oyster-shells. Here, from the fixed zoophyte a jelly-fish-bud is developed. This, like the fern-spore, produces 'eggs' or reproductive elements; and each of these eggs settling down, becomes a zoophyte, just as the cells of the fern-prothallus develop each into a fern-plant.

The history of a fern will be found to assist us in a marked degree in the comprehension of the life-histories of lower plants at large. For nearly all the flowerless plants develop in the fashion of the fern. In a moss, for example, a similar process occurs. As in the fern, the true reproductive bodies grow secondarily either on a thread-like body or on a prothallus. A mushroom, too, has an allied history to the fern. On the 'gills' of the mushroom we find the spores developed, and these give origin to new fungi

either directly or indirectly. The liverworts resemble the ferns in their development; and those well-known flowerless plants the 'horse-tails' or *equisetæ* agree with the ferns in having the young plant produced from a prothallus. In a typical seaweed—such as the common bladder-wrack (*Fucus vesiculosus*) of our coasts—the development resembles that of the fern in the production of a young plant through the union of the reproductive elements; there is, however, no prothallus or first generation. But we discover that amongst the flowerless plants very considerable variations in development may exist; the new and young plant being occasionally developed directly, and in other cases indirectly from the parent.

The habits of lower plant-life form of themselves a highly interesting topic. Many species of lower plants are parasitic, for example; and a very large proportion of the skin-diseases that affect man and animals—ringworm being included—are simply due to the habits of lower plants in selecting the skin-tissues for a habitation. The specific disease in each case is to be viewed simply as the result of the plant-growth. Commercially, the lower plants also become interesting when we reflect that a large number of plant-diseases are caused by the growth of these organisms on neighbour-plants, as well as on animals useful to man. Thus a fungus has more than once threatened the commercial prosperity of France, through causing disease in silkworms; and another fungus is the cause of salmon-disease; whilst potato-disease is also the result of lower plant-growth.

The potato-disease may afford a good illustration of those habits of lower plant-life which result in the development of disease in other plants. The *Peronospora infestans*, as the potato-fungus is named, forms as a delicate bloom on the surface of the potato-leaf. When the diseased leaf is examined by the microscope, the fungus itself is seen rising in the form of minute stalks, which protrude through the natural apertures that exist in the leaf. These stalks are jointed, and ultimately become branched, and they arise from a network of threads which lies deep down in the leaf-tissues, and which forms what has been called the 'fungus-turf' or *mycelium*. The ends of the stalks bear little swellings named *sporangia*, and these correspond in a measure, as in name, with the spore-cases of our fern. These spore-cases often fall off entire from the stalks; and occasionally one of these cases throws out a root, which is the beginning of a new plant, and which, finding its way into a potato-leaf, will produce there the characteristic fungus. But more usually, perhaps, the contents of the spore-case—which consist of living protoplasm—undergo a process of division, and when the case bursts, as in the fern, a multitude of little bodies escape. When these bodies gain access to water, they develop a couple of curious little tails, and by means of these tails they swim about as if they were actual animalcules—hence the name of *zoospores* applied to them by botanists. If now, one of these active spores finds its way into the leaf of a potato, it begins to germinate. A tube or root is thrown out from the spore, and this burrows into the leaf-substance. In due time, therefore, it will produce, by simple increase,

the 'fungus-turf' with its stalks issuing from the potato-leaf. When we know that each stalk of the fungus may produce at least one thousand of these little active spores, the reason why potato-disease evinces such a tendency to spread, is not far to seek. For as there may be millions of stalks, there must be countless billions of spores produced by a single diseased plant. But a most interesting observation was brought to light when it was discovered that in addition to the spores or spore-cases borne on the end of the stalks of the potato-fungus, there exist other spore-cases, lying buried in the leaf among the threads of the 'fungus-turf' from which the stalks spring. These latter are called 'resting-spores;' they exist in a state of quiescence; and only develop and spring into vitality after a certain period of quietude. Their office is that of giving origin to new growths of fungi; and from the knowledge of these 'resting-spores,' one may account for outbreaks of this disease after long periods of freedom from its attack. The presumed 'new' disease is, in fact, merely the result of the waking to activity of the 'resting-spores.'

Equally interesting are the phenomena of lower plant-life which the study of the fungus producing the salmon-disease discloses. This latter plant is a near ally of the potato-fungus, and is named *Saprolegnia ferax*. In its most natural situation, the *Saprolegnia* is found growing on the bodies of dead flies which putrefy in water. Another but quite distinct fungus (*Empusa musca*), it may be here noted, may be seen growing on dead flies, and fastening them by its white stalks to window-panes. Recently, the salmon-disease itself has been studied by Professor Huxley, and the observations of this biologist serve to unite in a singularly interesting fashion the life-history of the *Saprolegnia* and the manner in which it is propagated. Seen growing on the salmon, the *Saprolegnia* seems to exist in patches of diseased skin, which, at first affecting only the scaleless parts of the fish, may ultimately come to appear on scale-covered regions. These diseased patches are each a colony of *Saprolegniae*. The result of the fungus-growth is disastrous to the fish; for, sooner or later, the tissues below ulcerate, and a raw, bleeding surface is thus formed, extending in some cases even to the bones. The fish suffers irritation and pain, and dashes about in the water, rubbing itself against stones, and thus increasing the mischief by laying bare the diseased patches. Then finally, the animal, weakened and ill, succumbs to the disorder. It seeks the banks of the river, gets grounded in the shallows, and finally dies exhausted, a victim to the ravages of a life infinitely lower than its own. Ordinarily, the *Saprolegniae* feed and grow upon dead matter; but it would seem that, as in the case of the salmon-fungus, they may choose the living animal as a habitation. The potato-fungus, on the other hand, invariably infests living plants.

The examination of a diseased patch on the body of a salmon shows that it consists of the same network of threads, which, seen in the potato-leaf, are named the 'fungus-turf;' and at the ends of the filaments or threads of which the 'turf' is composed, globular bodies, similar in nature to those of the potato-fungus, are seen. Inside these spore-cases, the little 'spores' or particles of protoplasm are developed; but it is

a curious fact that in the fungus, as it grows on the salmon at least, the spores have not been observed to be provided with the little eyelash-like filaments or tails seen in the spores of the potato-fungus, and named *cilia*. In the ordinary *Saprolegnia*, growing on the dead fly, on the other hand, multitudes of the little moving 'swarm-spores' with tails are seen. If, however, the spores, liberated from the fungus growing on a salmon, gain access to another fish, they will germinate in its skin, produce the 'fungus-turf,' and in a word, develop the disease. We thus note that salmon-disease is of a highly infectious nature; and we further see that it is 'contagious,' and propagated by direct contact between a healthy fish and the germs of the fungus. From the infected salmon, it is easy to infect a dead fly with *Saprolegnia*. In forty-eight hours after a fly had been gently rubbed over a diseased patch on the salmon, the fly was found to be covered with a literal shroud of the white filaments of the fungus. Thus it is argued, that if the fungus can be transferred from the living salmon to the dead fly, it may, conversely, pass from dead flies to the living salmon. The dead insects may thus, in fact, be the original growers of the fungus; and the fishes may thus be infected from the dead and putrefying insect-population of the waters. It is interesting to note that the salmon-fungus will not flourish in salt water. A visit to the sea will cause the fungus to disappear; although, on the return of the fish to the fresh waters, the disease may again make its appearance. This latter result can hardly with safety be attributed to fresh infection. It is regarded as more probable that the fungus has only been stifled and not killed by the salt water. If we bear in mind that the 'resting-spores' of the potato-fungus may reproduce the disease after long periods of quiescence, we cannot fail to see an analogy between the cases of the plant and the animal. The vitality of the *Saprolegnia*, which has only been checked by the salt water, may spring forth anew on the return of the fish to the rivers.

The causes of the salmon-disease have already been indicated in the statement that upon dead insects the fungi flourish naturally. But the causes of their transference to the living salmon form a topic concerning which we have little or no positive information. Such a fact as the existence of a fungus, usually given to live on dead matter, upon a living animal, may perhaps only be accounted for by supposing either that the habits of the fungus have undergone an extension, or that its range and choice of hosts were wider than has been hitherto supposed. Or we have an alternative supposition at hand in the idea, that the fishes which are attacked present some special peculiarity of constitution which lays them open to the attack of the lower plant. Thus the thoroughly healthy fish may be presumed to escape the attack of the fungus, just as the chances of a perfectly healthy person being attacked with infectious disease are small as compared with those incurred by the debilitated body; whilst, on the other hand, the unhealthy or weakly fish may be presumed to be that which, *ceteribus paribus*, will present a fair field for the fungoid attack. The diffusion of the salmon-disease may

readily enough be accounted for on those principles of exceeding fertility which mark the flowerless plants as a whole. Professor Huxley calculates that a single fly may bear one thousand stalks of fungus, each having a spore-case. Allowing each spore-case to contain twenty spores, and that each case develops fully in twelve hours, we shall thus obtain forty thousand spores in a day of twenty-four hours. In the case of a salmon, as many as two hundred and eighty-eight thousand spore-cases may exist in the diseased patches of its body, this amount giving ten million spores as the product of twenty-four hours' vitality; or enough spores to give one such germ to every cubic foot of water in a mass one hundred feet wide, five feet deep, and four miles in length. And when we lastly reflect that over two thousand diseased salmon have been removed from a small river in one season, the favourable conditions under which the salmon-disease is propagated, are by no means difficult to conceive.

The space at our command will not serve for a further enumeration of other points connected with the habits of the lower plants. But enough has been said to show the vast field of economic as well as scientific interest that finds a focus in the lower ranks of the vegetable world. It may form an argument in favour of the practical utility of science-studies, when we discover that a knowledge of the history of those minute pests is the first condition for successfully attempting their extirpation. No greater boon can well be conceived as being conferred upon our race than the knowledge which tends to limit and check a plague or pest, by showing us clearly and distinctly the nature and habitat of the enemy; and but for the aid of science, we might still be hopelessly fighting many a hidden enemy in the dark.

MARJORIE.

AN OLD VIRGINIAN STORY.

IN TWO CHAPTERS.—CHAP. I.

UPON the night of the 20th of December 1781, the solitary figure of a man was buffeting its way against a blinding snow-storm through the silent deserted streets of Alexandria, that quaint, dead, old-world town, which still slumbers upon the banks of the Potomac, in the pleasant state of Virginia. Passing down Broadway and Maiden Lane until he had left the last houses of the town behind him, he met the full blast of the storm as it swept across the river from the distant Maryland hills. Verily, a man must have had important business indeed to have been out upon such a weird, uncanny night; and the Rev. Nahum Bond, a thin, withered, crop-eared young man, of the true old Independent type, was, as a rule, far too sensible of the comforts of life to be exposing himself unless he had important business in hand. He staggered along for a mile until he arrived at the gates of a gaunt, grim old house which stood some way back from the road, and known to the country round as Braddock's. His knock at the door was answered by a negro, who, carefully opening it but an inch or two, pushed the muzzle of a

huge horse-pistol out and asked who was there. The mention of his name, however, had an immediate influence upon the servant, who threw the door wide open, welcomed him with a broad grin, and led the way across the hall to a long, dark, panelled room, dimly lighted by candles stuck in silver sconces, and where were seated around a table a score of gaunt, grave-faced men, who greeted him with a sort of quiet enthusiasm which sounded like distant thunder.

He who occupied the chair at the head of the table—a big, fine-looking man, who wore his own iron-gray hair—rose as Mr Bond entered, and said: 'Better late than never, Brother Nahum. We waited half an hour for you; but as time is short and business is pressing, we considered it best to proceed at once.'

The young divine muttered something about being detained in the town, and sat himself upon the right hand of the president.

A stranger might have been pardoned for imagining that the object of this meeting was some sort of religious celebration, so stern and grave were the faces of its members, added to the presence of a gentleman in holy orders, and of a huge brass-bound Bible amongst the papers and inkstands which were strewn about the table. But its real character was soon made clear by the big man beside the Bible, who rose and said: 'Now that our number is completed by the arrival of one of our most earnest supporters and hearty co-operators, I think I may recapitulate what we have decided upon, for his benefit. The presence of the redcoat tyrants upon Mount Pleasant has become intolerable; and as hitherto Alexandria has not shown herself to be a distinguished atom of the great glorious mass now known throughout the civilised world as the Free and Independent States of North America, we, as representatives of the town, have resolved that the blow shall be struck. We are men; and as men, it does not become us to listen helplessly any longer to the continual complaints which pour in from all sides of the rapacious acts and insolent bearing of these men who call themselves our superiors. What has been done at Lexington, at Concord, at Wilmington, and at fifty other places, can surely be done at Alexandria. And what we propose to do is this: in five days, the Britishers will be celebrating, with their usual profane riotousness and drunkenness, their Christmas festival; and we propose to take advantage of their being off their guard, to drive them out of the place—into the river, into the woods, no matter where, so long as it be away from Alexandria. I am not a man of blood; but upon an occasion like this, it behoves us to be ready to make any sacrifice. They are not cowards, these Britishers; they will fight, and we must be prepared for it; and I take this to be our solemn duty, as much to ourselves as to every one to whom tyranny and oppression are hateful.'

The grim dark faces which had been gradually lighting up during the course of this impassioned oration, now relaxed altogether as the speaker sat down, and a loud murmur of applause arose, and continued until a tall weather-beaten Potomac pilot rose. 'Good words and true, Brother Hood,' he said; 'and I am sure that we all echo them. For myself, I can guarantee a score of river-side lads who will be a match for any twenty Britishers,

grenades, pikes, and all, although none of 'em have ever fired a gun in their lives except at a canvas-back or a jack-rabbit. And I suggest that we make Brother Hood's house, as being away from the town, our magazine and our place of meeting. My friend and I have overhauled the cellars in which the Britisher Braddock used to keep his wines in '55, and we have calculated that we can stow away there at least five hundred muskets, with pikes, swords, and ammunition in proportion. Now about the men we can raise. The Britishers are a hundred and fifty. We ought at least to have three hundred. 'Cause why? We've discipline and practice against us. As I said just now, I'll write down twenty for my share.'

Then one stern man after another rose—all men of wealth and position in the neighbourhood; and in a very few minutes three hundred good men and true were guaranteed for the cause of liberty.

'So far so good, brethren,' said Jeremiah Hood. 'And we must begin at once; for five days is none too much time in which to make our plans and to insure unanimity of movement amongst three hundred men. Let us each take solemn oath, brother Alexandrians, that we will not rest until every Britisher shall have been expelled from Virginian soil.' He raised the Bible to his lips, and passed it to his neighbour, and so on round the table.

It was rather a striking scene: the dark old room, with its Rembrandtesque effects of light and shade; the grim portraits of old Roundhead Hoods with biblical names and severe faces; the candles in the silver sconces just giving sufficient light to intensify the darkness, and to bring out in strong contrast the shades on the earnest faces of the assembly; all heightened by the low murmur of the gruff deep voices, and the ring of steel as each man, raising the Bible to his lips, drew his sword from its scabbard. The religious ordeal was followed by the more convivial ceremony of passing round a huge black jack brimming with brown October; for the night was bitter, and many members of the league had long distances to go. Then they took up their broad-brimmed hats, buckled their cloaks fast around them, and went out, leaving the parson and the host alone.

'Fill your pipe, Nahum,' said Jeremiah, 'and let us speak of our affairs together.'

A fresh log was piled on the fire, the jack was refilled, the pipes were lit, and the two men drew their chairs to the fire. The contrast between them was striking. On the one hand the burly, square form of the Independent farmer, his broad forehead lined with furrows of determination, inherited doubtless from those stern, conscientious forefathers of his who had preferred the solitude of the American backwoods to persecution and intolerance at home; the beard clipped short; and the sturdy development of the head well set off by the absence of a wig. On the other hand, the tall, thin, ungainly, big-boned figure of the parson, whose garb and bearing proclaimed at once the Independent minister, beloved by satirists and lampoonists. The two men sat puffing their pipes and gazing at the fire in silence for some minutes; then the old farmer said: 'I've been so occupied of late with this project, that I have

had no time to talk of the course of matters between you and my daughter Marjorie. I hope you make as rapid progress in her good graces as she does in her studies?'

The parson writhed uneasily in his chair, and then, after the manner peculiar to his time, replied: 'I would that I could say so, Master Hood. If I advanced as quickly in her opinion as she does in Latin and French, I should be the happiest man in America. I fear she will not need a tutor much longer.'

'Well, then,' said Hood, 'she will be needing a husband. Hey?'

'And I dare give it as my opinion,' quoth the minister, looking askance out of his green eyes at the old farmer, 'that the need will be satisfied sooner than people think—sooner than it could be wished for.'

The farmer took his pipe from his mouth, and wheeling himself round, looked keenly at the young man. 'That is a dark speech, Nahum. What does it mean?' he asked.

Nahum preserved silence.

'You don't mean to say,' continued the old man, 'that she has a—a lover, that I know not of?'

Nahum was still silent.

'Now listen, Master Nahum,' resumed Jeremiah; 'we are both men of the world. I put implicit trust in you; I respect you, I admire you; and I almost look upon you as my son. You have been connected with my family all your life, as was your father before you, and there should not be anything between us. Tell me now: has my Marjorie a lover other than you? I shan't be angry with her, although, of course, I shall be bitterly disappointed; for I have for a long time regarded you as the right man, and it would be a long time before I could reconcile myself to any other. I don't want to thwart the wench's inclination; I don't think that is a father's duty, so long as her lover is a true colonial and a good man.—Well; speak out, man!'

'I fear, I very much fear,' said Mr Nahum, 'that she cares very little for me; in fact, she despises and ridicules me. We have wandered together so pleasantly through the paths that lead to Parnassus, that I flattered myself our journey together would only end with our lives. Ah, Master Hood, it makes my heart ache to think that so good, so doting, so noble a father should be so rewarded! But I fear that she is carrying on a clandestine acquaintance with the very man of all others whom you would least care about her knowing. I have seen them together, I have seen them exchange embraces, I'—

'Who is he?' cried the old man sternly. 'Now, I charge you, Nahum, by all our old friendship, to tell me.'

'Lieutenant Harraden of the King's Regiment,' replied the minister.

The old man started as if struck; his dark face grew absolutely black, and his brow contracted so that his eyebrows formed a bristling black hedge across his face. He slapped his hand on his sword-hilt and said in a voice of thunder: 'She—my daughter, dare to give ear to the love-speeches of a king's officer? to hold converse with one of the instruments of our oppression, the trampers of our crops, the

violators of our hearths, the enemies of our liberty! Rather than she should so far demean herself, I would shoot her!'

'Nay, Master Hood,' said Nahum insinuatingly. 'Remember, she is but a young and thoughtless girl; and who ever knew a girl who did not prefer a red coat to a black one, and empty compliments to words of monition? Do not be too hard on her.'

'What sort of young fellow is this Harraden? I know the name somehow. The Harradens used to be neighbours of our family in Kent.'

'He is just as the rest of the king's officers are,' replied Nahum.

'That means to say, I suppose, that he looks upon any wench as fair game; that he drinks his two bottles of wine at a sitting; that he gambles, blasphemes, and fights; is a fop, a bully, and a roisterer? And such a man thinks himself a fit husband for the daughter of Jeremiah Hood, whose grandfather fought in the cause of liberty at Naseby, and three of whose sons are fighting in the glorious cause of liberty in America!'

Nahum had shot his arrow; so he put on his cloak, and wishing the old farmer a sorrowful good-night, went out.

The old man strode up and down the room in angry cogitation for some moments. Then he called the negro Cicero. 'Let Miss Marjorie speak with me,' he said.

The servant, alarmed at the fierce expression upon his master's face, left the room with alacrity; and presently the door opened, and Marjorie appeared—a fresh-coloured, brown-eyed, brown-haired lass, dressed in the sober style prevalent amongst the daughters of Independent families, but with a dash more of coquetry in the shape of a ribbon or two and skirts above the ankles, than was generally sanctioned amongst these stern God-fearing colonists—a pretty, piquant, graceful girl, such as we love to see in old pictures, and to associate with old red-brick houses, standing in many tinted gardens, with smooth-shaven lawns leading down to quiet rivers.

'Did you want me, father?' asked Marjorie, not without a tremor in her voice, as she saw the frown upon Jeremiah Hood's brow, and noted that his hands were tightly clenched behind him, as was his habit when disturbed in spirit.

'Yes, I did,' replied her father, without moving his head towards her. 'I want a few words with you. Shut the door. I hear that you are carrying on a clandestine acquaintance with one of our enemies, with Lieutenant Harraden of the King's Regiment.'—No answer.—'That you, the daughter of Jeremiah Hood, as well known as any man in Virginia as a champion for the rights of the great American people, have so far demeaned yourself as to receive the addresses of a roistering young fop, who will pretend to love you and then desert you; and above all, who wears the livery of the tyrant.'—Marjorie winced a little, but said nothing.—'He is an enemy,' continued her father; 'and all who have dealings with the enemy are traitors to their country and to the holy universal cause of liberty.'

'Who told you this, father?' asked Marjorie.

'Never mind who told me,' replied the farmer. 'I have it upon the very best authority, from

one whose word I have never yet had occasion to doubt.'

'I know—that sneak Nahum Bond,' murmured the girl.

'What's that? what's that?' asked her father, stopping short in his walk.

'I said Nahum Bond was a sneak, and so he is,' repeated Marjorie, who inherited the family spirit, although, as a rule, she was the most demure and peaceful of girls.

'Never—never let me hear you talk of your respected tutor in that way again,' said the angry old man. 'Sneak indeed! That's a new-fangled English word, and sounds very genteelly on the lips of a colonial lady forsooth! I have the very highest respect for Mr Nahum; I respect him for his honesty, for the love he bears me, for his humility, his steadiness, and his thrift. He is the man I had fixed upon as a fitting husband for you.'

'He, my husband, father!' exclaimed Marjorie, terrified. 'Are you in earnest?'

'Ay,' returned Mr Hood sternly. 'Did you ever know me otherwise?'

'Well,' said Marjorie, 'he may be all you think of him, and I hope he is; but if it were only for his being a—a, what I said just now, father, I couldn't love him.'

'But he loves you, Marjorie,' said the old farmer; 'and I can tell you it is something in these days for a girl to say that she is loved by a man of his character and attainments.'

'Yes, I know he does,' said Marjorie; 'he's always paying me clumsy compliments which I hate, and reading love-poetry, and calling me his Dulcinea and his Saccharissa, and I don't know what else besides. A creeping, writhing, yellow-faced creature!'

'At anyrate,' said Mr Hood, 'it is my command that you cease all acquaintance with this Mr Harraden. Return him all his love-letters, for of course you have been writing to each other, and tell him that you cannot keep up a pretence of love with an enemy of your country.'

'I don't pretend, father,' said Marjorie warmly. 'I love him truly and honestly, and I always will; and as to placing Mr Nahum by the side of him, why!—here the damsel tossed her head in the most supreme contempt. 'Ed—I mean Mr Harraden's family have been in Kent since the Conquest. And nobody knows who Mr Nahum is.'

'I don't care about families,' said the farmer. 'I have only to say that I consider Mr Harraden a very unfit person for you to know; and that if I find any further communication passing between you, I shall send you off to your old aunt's in Connecticut, and there you'll have meeting-house going enough to drive all ideas of love out of your head. That is all I have to say.'

Marjorie courtesied and left the room.

Mr Nahum Bond, when he came the next morning to give Marjorie her usual lessons, was uncommonly affable; whilst the attitude of the young lady towards him was distinctly the reverse. The minister could not fail to notice this, so, when the most uncomfortable two hours were ended, he said: 'Miss Hood, how very cold and distant you are to me to-day. May I ask if I have been guilty of anything to offend you?'

'What's the good of your standing there and

asking me if you have offended me,' replied Marjorie, 'when you know very well that you have? I wouldn't be a sneak, if I were you, Mr Bond.'

'A what, Miss Hood!' exclaimed the minister. 'A sneak? Surely a very improper expression to fall from the lips of a young lady at any time, but especially when addressed to one whose life is wrapped up in her happiness and welfare.'

'Then why should you go and tell my father, knowing his sentiments, about my acquaintance with Mr Harraden?' asked Marjorie.

'Your father put the question plainly to me,' replied Nahum, 'and what else could I do? He has suspected it for a long time.'

'Somebody has made him suspicious, then,' said Marjorie, 'for it would never occur to him naturally. I'm ashamed of you, Mr Bond, and I thought better of you.'

'Then try and think better of me again, Miss Hood,' said the young man, 'for I do love you so dearly, and you know that I would not do anything to hurt your feelings or to make you miserable. Can you not love me?'

'Mr Bond,' said Marjorie, assuming a dignified air as well as she could, whilst under the strongest provocation to laugh at the absurd attitude of her wooer, 'I love Mr Harraden; and I do not, I never can love you! Is that not enough?'

A peculiar look came over Nahum's face, such as Marjorie had never seen there before. 'You say, Miss Hood, that you do not and you never can love me,' he said. 'Must I take this answer as final?'

'Quite final,' replied Marjorie; and with a formal courtesy she left the room.

'Final is it?' muttered Mr Nahum as he quitted the house; 'very well then, miss. Your father and all his crew, and you also, shall pay for this decision.'

THE MARRIAGE OF WARDS OF COURT.

THE general superintendence and protective jurisdiction over the persons and property of infants,* which is vested in the Crown, has for a very long period been delegated to the Court of Chancery; and by the Supreme Court of Judicature Act of 1873, is retained for the Chancery division of the High Court of Justice, which takes the direction of their estate, and appoints guardians for their persons only. The young persons thus protected are called 'Wards of Court,' and are constituted such by any suit which relates to them, or on an order for their maintenance being made upon petition or summons, or when money in which they are interested is paid into Court under the Trustee Relief Act of 1847; but unless infants have property, the Court will not exercise its jurisdiction concerning them.

Now, to enable a Chancery ward, whether male or female, to marry, it is necessary to apply to the Court for permission for him or her to do so; which will only be granted on satisfactory evidence that the alliance is a suitable one, and

that a proper marriage settlement will be made; on which being done, an order is drawn up giving the ward liberty to marry.

Formerly, the Court of Chancery declined to sanction the marriage of an infant ward when, on account of his infancy, it was impossible for him to settle his real property so-as to go along with his title, or to provide for his younger children by the settlement. It is provided, however, by the Infants' Settlement Act for 1855, that every male infant of twenty-one years, and every female infant of seventeen years, may upon, or in contemplation of marriage, with the approval of the Court, make a valid and binding settlement of their real or personal estate on their matrimony.

It is considered a very serious contempt of Court to marry a ward without its consent; and the person who does so, as well as those who contribute and assist at the marriage, are liable to be committed to prison; while, if they are peers or peeresses, a sequestration will be ordered against them; but members of the House of Commons will not be privileged from arrest and imprisonment for this offence.

Among the more noteworthy cases of such contempt of Court are those which have occurred last century and the early part of the present one. Of the more flagrant of these cases, is one in which the son of Lord Tankerville's steward, by the contrivance of a nobleman, married a ward of Chancery in the nobleman's Park; for which grievous contempt they, and a parson in the Fleet Prison, who had been bribed by the nobleman with one hundred guineas to marry them, and also a maid-servant, were all sent to, and kept in jail for a fortnight, except the husband, who was detained there for six weeks. In another instance, a woman in mean circumstances and of bad character was lodged in prison for a long period, for marrying a male ward of Court, who was made drunk at an alehouse, and thus entrapped into the marriage. A very flagrant contempt of Court, under exceedingly aggravating circumstances, was committed by a justice of the peace, and a barrister who was formerly a solicitor, by contriving the marriage of a ward, with a fortune of thirty thousand pounds, to a school-master in Islington. He was for this serious offence not only sent to prison for five weeks, but was struck out of the Commission as justice of the peace, and prohibited from practising at the bar. In the leading case of *Eyre v. Countess of Shaftesbury*, tried in 1710, before Lord Chancellor Macclesfield, and Lords Commissioners Jekyll, Gilbert, and Raymond, a sequestration was issued against the Countess of Gainsborough, and Lady Shaftesbury, for marrying an infant, who was a peer, to Lady Susannah Noel; which, though not to his disparagement, was done without the consent of the Court or his guardian. In another case, that of *Baseley v. Baseley*, it appears that Mrs Baseley—formerly Miss Anne Wade—was on the death

* Any one under twenty-one years of age is, legally speaking, an infant.

of her father in 1806, heiress to real and personal property of large amount. She was made a ward of Chancery at an early age; in her seventeenth year she was taken away by Mr Baseley, a young gentleman of no property, and who had no previous acquaintance with her or her family; but he obtained possession of her by the aid of her governess and servants, and in gross contempt of Court. He and the young lady went to Scotland, and were married at Gretna Green in 1815; and were shortly afterwards again married in the Episcopal church of Edinburgh. After residing for some time in Scotland, petitions were presented to the Lord Chancellor on their behalf; but his Lordship would not listen to any application until the ward was brought within the jurisdiction of his Court. Shortly afterwards, Mr Baseley presented himself in Court, when Lord Eldon committed him to jail, where he was kept until Mrs Baseley attained her age of twenty-one.

It also appears that if a guardian connives at an intended marriage of a ward, or if there only be an apprehension that the infant will be married unsuitably either by the guardian or by his neglect, the Court will send for the infant, and commit him or her to the care of a proper person or relative, in order to prevent such danger.

The Court may also prevent a female ward from receiving letters, messages, &c., as was done in the case of Leoni, a Jewish singer. If it is doubtful whether a marriage with a ward of the weaker sex is valid, an inquiry may be made to ascertain this, and all intercourse will in the meantime be restrained; and if it be found that the marriage is illegal, a valid one will be ordered. For moral reasons, this course may also be adopted with a male ward.

It is likewise considered an aggravated contempt of Court for a person to marry one of its wards much above him or her in rank. In Herbert's case, last century, it was decided to be a very gross contempt when an infant ward, who possessed twelve hundred pounds a year, upon coming to town from Oxford, was drawn into marrying a common servant-maid older than himself, and with no fortune. In another instance, in which an infant of good family, the representative of a very old baronet, was about to be entrapped into a marriage with a common bricklayer's daughter, the Court would not permit it, and stopped the marriage. In a third case also, it was considered very criminal in all parties who contrived the marriage of a ward of Court with eight thousand pounds to the son of Lord Tankerville's steward, as already referred to. It appears, however, from several other cases, that the possession of a large fortune by the other party would be considered to counterbalance any but a very great inequality of rank; though the Court would not probably allow a man of no property whatever, although of equal family, to marry an infant heiress of rank with very large possessions, notwithstanding the consent of the guardians and all other parties concerned.

The commitment of a person to prison for marrying a ward of Court without its permission, is often made not merely to punish such a con-

tempt of its authority, but to compel him to execute a proper settlement; and in those instances in which there are mitigating circumstances, the husband, in offering to make an approved settlement, may obtain his discharge. It is thought that the modern practice is not to enforce the power of committal, when the contempt is not attended by any aggravating circumstances, but to hold it so as to compel the execution of a proper settlement. In a flagrant case, however, the husband will not be discharged on his offering to do so, until the Court should think he has been sufficiently punished; nor if it has ordered that he should, for procuring the marriage, be indicted for a conspiracy.

As to the terms of the settlement, when there has been no moral wrong, the terms are not influenced by the fact of a mere technical contempt having been committed. In most cases, when wards of Court have been married without its permission, the husbands have been men of straw, who married for the sake of the fortune; and the Court has therefore generally refused to give them any interest in the property; but if they are of equal rank and fortune with their wives, and make a corresponding provision for them out of their own property, it does not appear that the same rule would be adopted. In the case of *Bathurst v. Murray*, in 1802, Lord Eldon directed that the husband should have an annuity out of the property during the matrimonial union, as his lordship mentioned that there could not be much expectation of happiness when the husband had nothing, and the wife had the entire power over the property; but this course appears to have been rarely taken. In the case of *Hodgens v. Hodgens*, tried in 1837, on appeal to the House of Lords from the Court of Chancery in Ireland, Lord Cottenham properly said, that 'when men seek to get advantages for themselves by obtaining possession of wards under the jurisdiction of a Court of Equity, and by so doing are guilty of contempt against its jurisdiction, the Court will seldom if ever permit them to profit by their misconduct, or to enjoy any part of the property, to obtain which has probably been the motive of their proceeding.' The Master of the Rolls, Sir John (afterwards Lord) Romilly, decided to the same effect in the case of *Wade v. Hopkinson* in 1855; and Lord-Justices Knight-Bruce and Turner entertained the same view in the case of *Field v. Moore* in the same year. These judgments are also in accordance with the decision of Sir Edward Sugden, afterwards Lord St Leonards, in *re Anne Walker*, a minor, tried in the Chancery Court of Ireland in 1835. It also appears that the property of a female ward of Court will not be entirely settled upon the issue of her first marriage, although she and her guardians may consent to this being done.

From what has been stated, it is clear that our Court of Equity has adopted very strong and wise measures to discourage the marriage of infants under its protection without its permission; and we need scarcely add that those individuals who do so are held as guilty of a grave breach of morality and etiquette, almost beyond forgiveness. Moreover, such condemnable marriages mostly turn out unhappy ones, of which we have several conspicuous examples.

It is pleasing to know, however, that these unauthorised alliances do not often occur, and appear to have considerably diminished during the last half-century.

OUTWITTING THE BRIGANDS.

It was on such a morning as we fog-nurtured islanders seldom witness at home, that I stood upon the deck of the good steamer *Coumoundouros*, watching the nearing shores of the Piræus, which as all the world knows or should know, is the port of the classic city of Athens. The beautiful unclouded sky; the bright outline of the sun-bathed coast; the air laden with the scent of the distant Hymettus; the far eminence with the grand old Acropolis standing out white and bold in the clear atmosphere; and close at hand the mouldering tomb of Themistocles—all combined to arouse such poetic fancies in my mind, that I forgot for the moment the prosaic business upon which I had come. The screaming engine of the busy little railway which carries the traveller from the Piræus to Athens, soon reminded me, however, that I was accredited with a mission from a London Greek firm to their friends in the Attic city; and I was soon whirling over the sacred ground

Where History gives to every road a page!

We passed the monuments of those doughty champions of the War of Independence, Karaïskakis and Miaulis, and many other objects of interest; and after a ride of three or four miles, I found myself at my destination.

After the first few days, I certainly had a very pleasant time of it, the few hours' work each day acting only as a stimulus to my varied pleasures; and having examined the Acropolis, and lunched by the fallen pillar of Jupiter, seated myself in the ruins of the Pnyx—whence Demosthenes declaimed, and Pericles evolved his plans—I looked around like Alexander, for more worlds to conquer. I thereupon consulted my genial but unwashed host, Kyrie Antonio Pericles Papademetracopoulos—who, although Plato was to him a text-book, and the sayings of Socrates as familiar as the story of Tommy and Harry to an English schoolboy, was always as dirty as a sweep—upon the propriety of betaking myself to where

The mountains look on Marathon,
And Marathon looks on the sea.

For one might as well go to Egypt without visiting the Pyramids, or to Rome without entering St Peter's, as to 'do' Greece and leave Marathon unexplored. And when my host tried to dissuade me by assuring me that a Greek gentleman's ear had been sent a fortnight before by the brigands to his obstinate relatives, to hurry the negotiations for his ransom, it so roused my blood, that I vowed I would go if I returned

as close cropped as an English terrier. So away we started—myself and Themistocles the son of my host, a sallow unshaven youth dirtier than his father—mounted upon two high-spirited donkeys, our revolvers well primed, and our commissariat well stocked.

'*Adios Kyrie!*' shouted my long-named host as we cantered off.

'Never fear,' I replied, waving my revolver defiantly, and feeling that I should be greatly disappointed if the rascals did not show themselves.

On we went, enjoying the scenery and holding a hybrid conversation—he in broken English, and I in sadly mutilated Greek—until in the excitement of the ride, and the glorious panorama constantly unfolding itself to our view, I entirely forgot that there were such beings as brigands in existence.

'Now,' said I to Themistocles, after a ride of some hours, during which my appetite had become unpleasantly sharpened, 'let us look about for a spot where we can bivouac in comfort.'

We soon found a delightful place, sheltered all round, save where through a small opening, we obtained a view of a charming landscape. Dismounting, and allowing our animals to refresh themselves on the grass, we soon made havoc of the good things we had brought. I was lying upon my back smoking a cigarette after the meal, gazing dreamily at the blue firmament; and being too lazy to rise, had called upon Themistocles to pass the bottle.

'Has the fellow gone to sleep?' thought I, still indisposed to turn my head. 'Themistocles!'

But Themistocles heard me not; and when I raised myself upon my elbow, I saw him standing, as if struck dumb and motionless with fear, staring upon the opening. Instinctively I leaped up and clutched my revolver; but before I took a step, the cause of Themistocles' fear became apparent; and three shaggy forms behind three blunderbusses aimed direct at me, made me fully aware that I was in presence of those scourges of Greece, the brigands! But oh! what a metamorphosis! Where were the natty green jackets with silver buttons, the plumed hats, and the *tout ensemble* of the brigands of my youth, of the operas and the picture-books? Three ragged, disreputable-looking figures, clad in greasy sheepskins and dirty clothes, unkempt, unshaven, took the place of those tinselled heroes, and with stern gestures and muttered threats, ordered us to follow them. My first thought was resistance; but when I showed the slightest signs, the three bell-mouthed muskets were bent towards me; and I felt that the odds were too many, and determining to await events, grimly submitted to be led down the mountain by our unsavoury guides.

At last, after winding through ravines and hollows, across glens and over mountain-paths innumerable, this most unpleasant journey ended by our guides calling a halt as we gained the summit of an eminence surrounded by trees and tall rocks, forming an extraordinary natural fortress. Beneath our feet, in a deep ravine, with seemingly but one outlet, and excellently sheltered by overhanging foliage, was the camp of the brigands; and here we found the rest of the shaggy ruffians—with the exception of one who

stood sentinel—enjoying their siesta with indolent content.

A shrill whistle soon brought the rascals to their feet; and rushing up to meet us, they displayed a dozen of as unfavourable specimens of the human race as could well be found. Seizing our asses by their bridles, they relieved our captors, and led us down the ravine; and having roughly assisted us to dismount, brought us into the presence of the chief of the band.

'Bravo, lads! excellent, excellent!' he shouted, as his sparkling eyes bent upon us in delight; and after a cursory examination, we were conducted, amid the excited gesticulations of the brigands and without undue ceremony, into a dark cavern within the ravine.

'Shiver my maintops!' exclaimed a voice as I groped my way in; 'they might give us sea-room, the vagabonds, and not land us in this lubberly creek; and now they are shoving more craft in to anchor!'

'Haul in, Jack, old chum!' answered another; 'we must make the best of a bad job, mate.'

To say that my heart leaped to my mouth at hearing such unexpected words, and finding myself in the company of my own countrymen, would no more than describe the cheering sensation that thrilled through me.

'What cheer, mates?' I cried in the darkness. Answering exclamations of astonishment greeted my words; and in a few minutes our stories were told; and I learned that my new-found friends were the Captain and supercargo of a ship then lying in the port of the Piræus, who, seeking a like object, had met with a similar fate to my own.

'And now,' said Captain Jack Jenkins, 'how are we to get out of this scrape? If I had Tim and Joe and Black Tom, each with a cutlass and a barking-iron here, we'd soon make a passage, I'd warrant!'

'That's all very well,' said Will Johnson the supercargo; 'but we haven't. If I'd but the opportunity given me, I'd guarantee'—

Whatever the supercargo was about to say was cut short by the advent of two shock-heads at the little opening of our prison, and two harsh voices calling us—as my guide Themistocles informed us—to partake of a feast; for we learned afterwards that the chief, in commemoration of having made such a good haul, had decided to allow us, his prisoners, to partake of the general festivity. But as a preliminary, we had to undergo an examination as to our capability of paying the anticipated ransoms. First, we were relieved of our watches and rings, the Captain using language rather strong for translation to these pages, to the great amusement of his tormentors, who with similar gesticulations to his, endeavoured to imitate the sound of the Captain's words, which of course only added to his wrath and their hilarity.

'You uncombed, dirty-faced vagabonds!' he shouted, 'if I had a few of you aboard the *Annie Martin*, I'd twist your ugly heads over the yard-arm in the twinkling of a jiffy!'

Of course they only laughed the louder at his impotent rage; and I thought it quite as well that they did not understand the language in which he gave it vent.

The operation of stripping us of our valuables

gave me an opportunity to observe the appearance of my companions. Captain Jenkins was the beau-ideal of an English seaman. In age about thirty-five, of a large and robust build, a face broad, manly, and bearded, and limbs such as would delight a sculptor to copy. His height was nearly six feet; and he had an air of command about him which was doubtless bred of his occupation. The supercargo, Will Johnson, was perhaps ten years younger; nearly as tall as his friend, strong and active; and take us altogether—for I am of no mean stature myself—we were three men who, under any circumstances, would be no disgrace to our country; and if any opportunity should arise for an attempt at an escape, I felt certain that we should give as good an account of ourselves as any scratch three, here or there.

Having satisfied themselves of the value of my late father's watch, which I parted from with some emotion, and of the intrinsic worth of the Captain's gold chronometer, as well as the supercargo's watch and diamond ring, we were interrogated, through Themistocles, as to our means. For myself, the name of the firm I was travelling for acted with a talismanic effect upon them, and I was immediately assessed—notwithstanding my protestations—at three hundred pounds. At this price, too, the Captain's freedom was valued; while the unfortunate supercargo—whose business they persisted in confounding with that of owner of the cargo and ship—was unanimously voted to be worth twice our ransom. Having arranged this matter to their own satisfaction, if not to ours, we were told to sit down and enjoy ourselves with what appetite we could muster.

The smell of the roast lamb and the freshly baked meal-cakes, however, soon aroused pleasanter sensations, and dimmed for a time the memory of our griefs; more especially as, under the apparent certainty of obtaining his booty, the chief condescended to be quite patronising towards us, carving the joints himself for us, and delicately handing on the point of a dagger, our several portions. After we had satisfied our hunger with the more solid viands, we were regaled with dried fruits as dessert; and a large jar of a peculiar sherry-coloured but bad-tasting wine of a resinous flavour—which Themistocles described as the common wine of the country—was brought in and set down in the midst of us. This we told them we could not drink; and the chief very generously ordered us a couple of bottles from his own particular store, doubtless the proceeds of a raid upon some well-to-do householder.

Will Johnson after a time managed to ingratiate himself in the favour of our shaggy host and his friends by his genial happy manner and frank bearing, favouring the company with many remarks, which, translated by Themistocles, evidently pleased them. When, too, by sleight-of-hand—in which he was an adept—he performed some simple tricks, and gave them a music-hall song with a rollicking chorus, and wound up with a hornpipe accompanied by the Captain with a pocket-comb and a piece of paper, the general enthusiasm knew no bounds, and the beetle-browed vagabonds laughed till the tears rolled down their cheeks.

Will now became on such excellent terms with them all, that he proceeded to take some

freedoms with them; and when he snatched the horn from the cup-bearer, and installed himself in that official's place, ladling the wine out of the wide-mouthed jar and handing it round to the company, his triumph was complete.

'For heaven's sake!' said he as he passed us, 'don't take any of this stuff, and don't drink much of your own.'

'Never fear,' said Jenkins, making a wry face; 'one taste is sufficient.'

And so Will went round with the cup, making a comical remark to this one, and a grimace at that, until the chief—evidently fearing from their hilarity that they were taking too much—ordered them to desist from drinking, and return to their several duties.

Meanwhile, we were sent back into our dungeon, with a sentinel stationed at the opening.

'Not a word,' whispered Will, as we settled down in our prison.—'Here's something, Captain,' he continued, 'that belongs to you.'

'Why,' said the Captain in reply, as Will handed him the article mentioned, 'this is a stopper out of my medicine chest.'

'To be sure it is, Jack,' returned Will; 'and I must apologise for the liberty of taking your laudanum phial; but my confounded back-tooth was so painful on board the ship last night, that I got up and took it, and luckily forgot to return it this morning. You must debit me with the bottle and its contents, for I dropped them both into the vagabonds' wine-jar!'

'What!' we all exclaimed in a breath.

'Now, stop your clappers!' continued the supercargo.—'Jack, you know I'm not bad at sleight-of-hand tricks. Well, in the first place, having contrived to secrete the bottle while the blackguards were relieving me of my valuables, and then having attained the position of waiter, what was easier than to wriggle the bottle down my sleeve, whip out the stopper, and drop the lot into their swipes; giving the bottle a crack and stirring the laudanum up, every time I dipped the horn into it!'

'Bravo, Will!' cried the Captain, seizing his hand and giving it a hearty shake. 'If that's the case, we're safe; for the black-faced rascals won't wake up for a dozen hours I'll be bound. There! our guard has dropped off already!'

And sure enough, the drowsy ruffian had planted himself right across the opening and was snoring loudly.

'Now for it!' cried the impetuous Jack Jenkins, rising.

'Hold hard!' said Will. 'Let them get well off.'

So, settling ourselves down for half an hour, we talked the matter over. At the end of this time, we sent the trembling Themistocles to see how things were outside; and after peeping over the prostrate sentinel, he gave us to understand that all were sleeping except three, and they were retiring to the farther end of the ravine, and would in a minute be out of sight.

'Capital!' said Will, with suppressed excitement. 'Now, each take a pistol and a cutlass from the fellows, and follow me.'

One after the other we stepped across the sleeping brigand at the entrance, Will relieving him of his pistol, dirk, and blunderbuss; while the Captain and I stood by ready to give him

his quietus at the slightest sign of his waking. Then the four of us, gliding like ghosts, assisted ourselves to whatever weapons we could most easily lay hands upon; and as Themistocles was not of much use for fighting, we gave him the bag containing our valuables—which we found by the side of the sleeping chief—as well as several spare pistols, to carry. Picking our way without speaking a word, we advanced towards the open end of the ravine, and just as we turned round a jutting piece of rock, we saw the three sentinels, seemingly in earnest conversation.

'Halt!' whispered Will. 'Now for a rush!' and each singling out his man and clutching his rifle by the barrel—for we avoided the noise of shooting—we sprang forward. Almost simultaneously, and before the enemy had time to observe us, we were upon them, and three rifle-stocks descended upon three shock heads with such force, that two of the fellows dropped like stones. The stock of my rifle glanced off the hard head of my antagonist and crashed against the rock. With a stifled cry, he turned; but in an instant my hand was upon his throat, and the sound died in his gullet; while with the strength of desperation, I dashed his head against the wall-like rock; and after a struggle—in which he wounded me with his dagger—he fell from my grasp, apparently lifeless.

'Now,' said the Captain, 'where are the donkeys?—Come, Greeky!' he cried to Themistocles; 'bear a hand;' and looking around, we espied our four animals just as we left them, but with a brigand sitting by them. Here was an unlooked-for rencontre! He was fully a hundred yards off, and to get at him, we should have to cross a small plateau.

'Leave him to me!' cried Jenkins, preparing to rush forward. But under the advice of the supercargo, he stopped. We could have picked him off easily, but dared not for the noise of the rifles.

'Hang it!' impatiently muttered Jenkins, 'we shall be trapped again, after all;' and without further parley, the impetuous fellow started off, running on the tips of his toes, with a drawn cutlass in one hand and a pistol in the other. Just as he was within a few yards of the brigand, the latter turned round, and seeing how matters stood, made for his rifle, which was leaning against a tree a few feet off; but a revolver hurled deftly by Will Johnson—for we had all followed—catching him directly in the face, so effectually stopped his progress, that he fell stunned to the ground.

'You persist in doing all the work,' said Jenkins as we came up to him. 'But quick, lads; off we go!' and in a moment we were on our asses, and under the guidance of our Greek companion, were making with break-neck speed for Athens. Up hill, down dale, on we went for a couple of hours without stopping or meeting a human being; then, just as we were about to cross the summit of a mountain at which we had arrived, a harmless-looking peasant wished us 'good-day,' and was about to pass on.

'Seize him!' cried Themistocles; 'he's a scout.'

So seize him we did, for caution's sake; and as there were no trees near, we tied his hands and legs together, and left him begging for

mercy. But there was no mercy in us, more especially as Themistocles explained that there was such a curious and mysterious connection between the brigands and villagers, that it was by no means unlikely—had we allowed him to go free—he would have hied to the nearest village and roused a swarm of semi-brigands about us.

Having travelled for four hours, and as our asses could scarcely get along for fatigue, we called a halt; and after resting ourselves and watering our animals, we continued our journey until, late at night, we reached Athens, where, round the hospitable board of our host, we soon forgot our troubles.

CURIOUS INSTANCE OF MENTAL PRESCIENCE.

AN article in *Chambers's Journal* (No. 947) on 'Curiosities of Mental Prescience' has brought to my recollection an incident which happened to me upwards of twenty years ago. It produced a great impression on my mind at the time, and shows that there is some mental law in operation that is as yet inexplicable. But I will let the facts speak for themselves.

At the time I have alluded to, I attended a church among the members of which a certain question was then causing a great amount of excitement. Feeling ran very high, and meetings were called time after time to discuss the matter, which touched upon the acts of certain officials. An anti-official party was formed; and I took an active part in its movements. I thought a great injustice was being done, and I did all I could to right matters. Well, a meeting was called one evening in a room not connected with the church, and we malcontents were to be present to discuss the matters in dispute. Our clergyman was exceedingly anxious that party feeling should not run so high as to cause any rupture in the church. That anxiety on his part was put very strongly to me a few hours before the meeting, at which he was not expected to be present, hence I was exceedingly anxious that we should not do anything to give him, personally, any offence. I attended the meeting, having had to hurry from my business to be there in time, and had thus been six or seven hours without food. I mention this, as it may possibly have some bearing on my mental and nervous condition at the time.

The meeting was an exciting one. I spoke in it. I know I had an excruciating headache; and when I sat down, another speaker followed. I listened to him for a minute or two, when, such was the pain in my head, that I rested it on my hand, and my elbow on my knee, and pressed my aching brow. I at once fell into a semi-unconscious state, or a kind of half-dream, call it what you like. I was perfectly unconscious of what was going on around me, though I felt I was in the meeting. In that state I saw, as in a vision, our clergyman walk in, and of course his presence under such circumstances created some little excitement. He told us why he had come, and indeed spoke, as I thought, for about a quarter of an hour, and then bowed himself out. On that, I again as it were came to myself.

Now, to show that I had only been an inap-

preciably small time in that semi-unconscious state, I may mention that I found that the same speaker was on his legs and that I had not lost a single sentence of what he said. Of course, up to that time our minister had not been in. But the marvellous part of the story is, that in a very short time afterwards, and whilst the same speaker was still addressing the meeting, the minister came in just as I had seen him in my 'vision,' and delivered precisely the same speech as I had heard him deliver when I was in the state described, and went out exactly as I had seen him do before!

I don't attempt to offer any explanation of the fact, but give it as a curious instance of mental prescience.

TEL-EL-KEBIR.

SEPTEMBER 13, 1882.

OUR forces were massed in the dead of the night,
Each man carried nought but was needful in fight,
Accoutred and ready, they sought for repose;
Two hours were thus spent, when they silently rose.

No bugle-notes rang on the calm cloudless air;
A whisper was passed for the march to prepare:
In silence they moved o'er the dark trackless sand,
Took their course by the stars, and with compass in hand

Each regiment *felt* for the neighbouring line,
And kept its position without sound or sign.
Thus weird-like the army still held on its way,
But halted awhile for the break of the day.

The order was passed: 'Let no man fire a shot,
Until at the trenches the first line has got;
Then rush with a cheer, and the bayonet wield,
The Islamite horde must then speedily yield.'

Sir Garnet's design was a consummate plan;
His soldiers he knew he could trust to a man;
And thus when the muttered command passed around,
His heroes dashed forward with joy at the sound.

Though met with a shower of bullets like hail,
No obstacle could o'er their ardour prevail;
They leapt o'er the ditches and swarmed up the slope,
Dropped inside the works, with the rebels to cope.

No race of the East but must stagger and reel
When charged hand to hand with the British cold steel.
Few minutes sufficed from the first of the rush
The strength of proud Arabi's legions to crush.

The Highland Brigade bore the brunt of the fray;
Their ranks were more thinned than the rest on that day;
While the cavalry swept o'er the mass in retreat,
And cut down their hundreds the rout to complete.

The Indian contingent went straight on ahead,
Till Tantah's old thoroughfares rang to their tread.
The campaign was won; and ere next sun had set,
In Cairo the victors triumphantly met.

All arms of the service have valiantly fought,
Fresh laurels to history's pages are brought;
Enshrined on our flag a new name shall appear,
Recalling the vict'ry at Tel-el-Kebir.

VOLCANOES.

THE phenomena of volcanoes are among the most imposing and awe-inspiring within the circuit of natural influences. This is due in great part to the sense of utter helplessness that fills the mind of the observer in view of stupendous natural forces which he is powerless to check, and of tremendous agencies of destruction which it is impossible for him either to resist or control. Moreover, the apparent irregularity of the eruptions which take place from time to time in the chief centres of volcanic action, is such as to stimulate his curiosity as powerfully as they excite his fears; and thus the phenomena, and their attendant manifestations of irresistible and destructive energy, have rendered the 'burning mountain' in all ages and among all peoples an object of unceasing wonder and apprehension. In the more poetic ages of the world, when men were disposed to personify those powers in nature that were beyond their comprehension or control, such volcanic outbreaks were attributed to causes in keeping with the modes of thought which then prevailed. The volcanoes in the Mediterranean area were accounted for, in the picturesque mythology of the time, by supposing that the gods were there engaged in conflict or toil; the mountain of Vulcano, or Volcano, in the Lipari Islands, being appropriated as the forge of the Greek Hephestus and his Roman representative Vulcan—and the name thus came to be applied to all similar phenomena. Etna, again, was regarded as formed by the mountains which the vengeful Zeus had heaped over the rebellious Typhon, its periodically recurrent eruptions being ascribed to the tremendous struggles by which the buried giant sought to free himself from the superincumbent mass. But such poetical explanations have long ceased to have weight among mankind, and we now seek for a solution of those wonderful problems of nature in a manner more in keeping with the scientific spirit that is every day removing us farther and farther from the area of mythological influences.

Within the last thirty years, volcanoes have been made the subject of close and scientific observation, and the questions that still remain unsolved are now confined within a comparatively narrow area. The chief contribution which has ever perhaps been made to the scientific elucidation of the subject, is to be found in a volume by Professor Judd, entitled, *Volcanoes: What they are, and What they Teach* (London: Kegan Paul & Co.). This volume will serve as the basis of some observations, in which we shall endeavour to sum up the extent of present knowledge on this interesting subject.

A volcano is generally described as 'a burning mountain, from the summit of which issue smoke and flames.' This definition Mr Judd takes exception to, both as a whole and in its individual propositions. In the first place, the action which takes place at volcanoes is not external 'burning,' or combustion, and bears, indeed, no relation whatever to that well-known process. Nor are volcanoes necessarily 'mountains' at all; essentially, they are just the reverse—namely, holes in the earth's crust, by means of which a communication is kept up between the surface and the interior of our globe. The mountains that generally exist at centres of volcanic activity, are simply the gathered materials thrown out of these holes, and have not therefore to do with the causes, but with the consequences of volcanic action. Neither is this action confined to the 'summits' of mountains, for it as frequently occurs on their sides or at their base; while what is called 'smoke' is in reality steam or watery vapour; and what is described as 'flames' is nothing more than the glowing light of the molten matter in the crater reflected from these vapour clouds.

Such, then, being some of the popular misconceptions of the causes and character of volcanic action, a more accurate conception may be obtained of what volcanoes are, if we have an opportunity of hearing from eye-witnesses how they are made. An interesting example of this operation has been afforded within the modern

historical period. On the Bay of Naples, and about eighteen miles' distance from Mount Vesuvius, is a conical hill four hundred and forty feet in height, and covering an area more than half a mile in diameter. This is called Monte Nuovo, or the 'New Mountain,' and came into existence less than three hundred and fifty years ago, its site having been anciently occupied in part by the Lucrine Lake. This continued till 1538, when the 'New Mountain' was formed; and the facts attending its formation have been conclusively proved. For more than two years previously, the country around was affected by earthquakes, which gradually increased in intensity, and attained their climax in September of the year last mentioned.

'On the 27th and 28th of that month, these earthquake shocks are said to have been felt almost continuously day and night. About eight o'clock in the morning of the 29th, a depression of the ground was noticed on the site of the future hill; and from this depression, water, which was at first cold and afterwards tepid, began to issue. Four hours afterwards the ground was seen to swell up and open, forming a gaping fissure, within which incandescent matter was visible. From this fissure numerous masses of stone, some of them "as large as an ox," with vast quantities of pumice and mud, were thrown up to a great height, and these falling upon the sides of the vent, formed a great mound. This violent ejection of materials continued for two days and nights, and on the third day a very considerable hill was seen to have been built up by the falling fragments; and this hill was climbed by some of the eye-witnesses of the eruption. The next day the ejections were resumed, and many persons who had ventured on the hill were injured, and several killed by the falling stones. The later ejections were, however, of less violence than the earlier ones, and seem to have died out on the seventh or eighth day after the beginning of the outburst. The great mass of this considerable hill would appear, according to the accounts which have been preserved, to have been built up by the materials which were ejected during two days and nights.' This volcano is now quiescent, and the slopes of the hill are covered with thickets of stone-pine.

The circumstances attending the formation of this remarkable hill may be regarded as typical of what has taken place in the case of probably every centre of volcanic action that exists. The presence of internal disturbing agencies is first notified by successive earthquake shocks, which result in the partial disruption of the surface, and the opening out of a fissure, from which, along with heated water or steam, masses of rock, mud, and other debris, are ejected. These materials, as they fall back, gradually accumulate around the opening, until what is called a crater is formed. Within this crater, incandescent matter is visible, which from time to time bursts or boils up with great eruptive force, sending forth immense volumes of heated vapour, and ejecting fresh masses of loose materials, which, as they fall back upon the newly-formed conical hill, and roll down its sides till they reach the angle of rest, gradually add to its height and swell out its bulk. Thus, what had been but a short time before a level valley, or even, as in the case

of Monte Nuovo, a lake, is now an elevated hill, with all the strange and striking characteristics of a 'burning mountain.'

In the early period of a volcano's existence, and under normal atmospheric conditions, the cone round the crater is built up pretty equally on all sides, whereby the opening of the volcano continues to retain its original central position. But there are various agencies by which the shape of the volcanic cone is modified and changed. For instance, in the case of high mountains, such as Vesuvius, the combined weight and pressure of the material that surrounds or falls back into the opening of the crater has a tendency to plug up the opening altogether, in which event the subterranean forces frequently burst out by an opening which they make for themselves in the lower slopes of the hill. When this occurs, the same phenomena happen as before. The debris thrown out falls back round the new-made opening or fissure, and a twin volcano—or 'parasitic cone,' as it is termed—is gradually formed. Again, when the volcano, either during an eruption, or from its geographical position, is exposed to strong winds blowing persistently in one direction, the greater portion of the dust and debris ejected into the air is carried to leeward, and thus the cone is built up with the crater on one side, the summit of the cone so formed being frequently much higher than the crater, and in a sense overlooking it. Of perfect cones, those of Cotopaxi, nineteen thousand six hundred feet in height, and Citlaltepeli, seventeen thousand three hundred and seventy feet, are striking examples; though in each case we may take it that successive periods of eruption alternating with periods of quiescence have frequently changed both the size and the shape of the respective craters.

In describing the origin of Monte Nuovo, we have seen the process by which volcanoes are formed; and in Mr Judd's account of what he saw taking place in the crater of Stromboli, we gain a corresponding knowledge of how volcanoes, after being formed, continue to act. Stromboli is one of the oldest volcanoes in the Mediterranean Sea, and is peculiar in this respect, that for at least two thousand years it has been in a constant and regular, but not in a violent or dangerous state of activity; hence it is possible for observers, without any overwhelming sense of danger, to watch for hours together the series of operations going on within the crater. Our author, in 1874, made a careful examination and sketch of this volcano. The island of which it consists is of rudely circular outline, and the volcano rises in a conical form to the height of three thousand and ninety feet above the level of the Mediterranean. Stromboli is one of those volcanoes in which the crater is not on the summit, but on the side of the mountain some distance below the summit. Viewed at night-time, it presents a very striking and singular spectacle. The mountain, owing to its great elevation, is visible over an area having a radius of more than a hundred miles; and as it bursts out intermittently into a broad flash or glare of light, then sinks down, only in a few minutes to flash out afresh, it has been called 'the Lighthouse of the Mediterranean.'

'If we climb up,' says Mr Judd, 'to this scene of volcanic activity, we shall be able to watch narrowly the operations which are going on there. On the morning of the 24th of April, 1874, I paid a visit to this interesting spot in order to get a near view of what was taking place. On reaching a point upon the side of the Sciarrà from which the crater was in full view before me, I witnessed an outburst which then took place. Before the outburst, numerous light curling wreaths of vapour were seen ascending from fissures on the sides and bottom of the crater. Suddenly, and without the slightest warning, a sound was heard like that produced when a locomotive blows off its steam at a railway station; a great volume of watery vapour was at the same time thrown violently into the atmosphere, and with it there were hurled upwards a number of dark fragments, which rose to the height of four hundred or five hundred feet above the crater, describing curves in their course, and then falling back upon the mountain. Most of these fragments tumbled into the crater with a loud, rattling noise; but some of them fell outside the crater; and a few rolled down the steep slope of the Sciarrà into the sea. Some of these falling fragments were found to be still hot and glowing, and in a semi-molten condition, so that they readily received the impression of a coin thrust into them.'

There is a still higher spot on the upper side of the crater from which the spectator can look down upon the bottom of the crater itself and see what is going on there; and when the wind is blowing from the onlooker towards the crater, he may sit for hours watching the wonderful scene displayed before him. 'The black slaggy bottom of the crater is seen to be traversed by many fissures or cracks, from most of which curling jets of vapour issue quietly, and gradually mingle with and disappear in the atmosphere. But besides these smaller cracks at the bottom of the crater, several larger openings are seen, which vary in number and position at different periods.' These larger apertures may be divided into three classes: (1) Those that emit steam in loud snorting puffs, like a locomotive engine; (2) those from which masses of molten material are seen welling out, and sometimes flowing outside the crater in a lava-stream; and (3) those within the walls of which a viscid or semi-liquid substance is seen slowly heaving up and down. As we watch the seething mass in this third class of apertures, 'the agitation within it is seen to increase gradually, and at last a gigantic bubble is formed, which violently bursts, when a great rush of steam takes place, carrying fragments of the scum-like surface of the liquid high into the atmosphere.'

'If we visit the crater by night,' continues our author, the 'appearances presented are found to be still more striking and suggestive. The smaller cracks and larger openings glow with a ruddy light. The liquid matter is seen to be red or even white hot, while the scum or crust which forms upon it is of a dull red colour. Every time a bubble bursts and the crust is broken up by the escape of steam, a fresh glowing surface of the incandescent material is exposed. If at these moments we look up at the vapour-cloud covering the mountain, we shall at once understand the

cause of the singular appearance presented by Stromboli when viewed from a distance at night; for the great masses of vapour are seen to be lit up with a vivid, ruddy glow, like that produced when an engine-driver opens the door of the furnace and illuminates the stream of vapour issuing from the funnel of his locomotive.' A more vivid picture could scarcely be drawn of the process of volcanic action, or one conveying to the reader's mind a better antidote for the misconceptions that prevail regarding it.

The three essential conditions on which the production of volcanic phenomena seems, in Mr Judd's opinion, to depend, are the following: 'First, the existence of certain apertures or cracks communicating between the interior and the surface of the earth; secondly, the presence of matter in a highly heated condition beneath the surface; and thirdly, the existence of great quantities of water imprisoned in the subterranean regions—which water, escaping as steam, gives rise to all those active phenomena we have been describing.' The questions involved in the second and third of these conditions—namely, how matter in a highly heated condition comes to be found beneath the surface of the earth, and how the additional presence of water there is to be accounted for—have already been treated by us in an article entitled, 'Is the Interior of the Earth Molten or Solid?' (No. 943), and need not therefore be further referred to in this place.

Regarding the first of the above three conditions of volcanic phenomena—cracks or fissures in the earth's crust—Professor Judd, in the work in question, has added largely to the existing knowledge on the subject. He has contributed also not only to our knowledge of the causes and operations of volcanic phenomena, but to what we know of their uses in the economy of the natural world. The materials ejected from volcanoes during an eruption are not, as many may think, a wholly useless collection of debris. On the other hand, much of what is thus thrown out is of considerable commercial value. The volatile substances issuing from volcanic vents are at once deposited when they come into contact with the cool atmosphere; others form new compounds with one another and the constituents of the atmosphere; while others, again, combine with the materials of the surrounding rocks and form fresh chemical compounds with some of their ingredients. The deposits which are thus continually accumulating on the sides and lips of volcanic fissures, consist of sulphates, chlorides, sal-ammoniac, sulphur, &c. At Vulcano, regular chemical works have been established by a Scotch firm in the crater of the volcano, a great number of workmen being engaged in collecting the materials which are deposited around the fissures, and which are renewed by the volcanic action almost as soon as they are removed. This work, as one may readily suppose, is not at all times carried on with safety; for in 1873, a sudden outburst of activity within the crater took place before the workmen could escape, and several of them were severely burned by the explosions.

As the knowledge of natural phenomena and natural products extends, man is day by day widening the area of his operations, and allowing a smaller and smaller proportion of those products to go to waste; yet it may not be without

a feeling of surprise that many will learn, that even the seeming refuse of volcanoes is rich in constituents that are at once valuable and useful.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER XLVIII.—‘LET ME STAY WITH YOU,’
PLEADED MILLY. ‘I SHALL NEVER MARRY.’

MR JOLLY bore his daughter's death with that Spartan fortitude which belongs to the great race of Egotists. I will not say he did not grieve; but he talked too much of his bereavement for my simple fancy, and managed his handkerchief too artistically as he stood beside the grave. There is a sort of man who will mountebank grief at a funeral as he will mountebank joy at a wedding and patriotic indignation at an election meeting; who, if he shed tears, must needs do it with a grace, and dances you an oratorical minuet over the slain in a Roumelian atrocity. Of one sincerity of regret Mr Jolly was guilty. His son-in-law had no filial yearnings towards him, and did not beg him to make his house his home. You meet Mr Jolly in life now and then, as well as in novels, and I cannot conceive of him anywhere as being other than a bore. I fear that sermons are wasted upon him, and that portraiture is a vain art for him. Meeting his reflection in these pages, he may say—I think I hear him—that it is a most unfaithful and uncharacteristic sketch, and not in the least like anybody.

There are few wounds from which the human heart will not recover, if they are inflicted in its youth. And perhaps the best way of curing such wounds is to leave them to their own healing, and to do whatever plain duties lie before you. This was Val Strange's cure, and it succeeded as well as could be hoped. From that wild scene on Welbeck Head, he went back to such work as he could find, and then and there left the Primrose Way for good. He has not yet lived down the beliefs his neighbours entertained about the callousness of his conduct towards his young wife and his hardness at her death. And so true are the world's verdicts and so well worth listening to, that Mr Jolly passes as a model of paternal grief and tender fatherly remembrance of the dead, whilst Val is still spoken of as having exhibited himself as a monster of no feeling. It strikes some people as a curious thing that so dour and hard a man as Mr Gerard Lumby was believed to be should ever have overlooked and forgiven the wrong Val Strange did against him. And seeing that the two men, though they meet but seldom, are singularly attached to each other, these wisacres conclude that Gerard has but a shallow sort of nature after all, and is incapable of any very strong and enduring emotion. But these are mainly people who make a great point of their pretensions to ‘read character.’

Whatever may be thought still of Val's relations with his beautiful wife, there are no mistakes made about his love for his little daughter. He

loves her with a haunting remorseful tenderness, a sad and deep affection; and the common people say that little Constance is the very apple of Squire Strange's eye.

Aunt Lucretia inoculated Reginald only too easily with her own beliefs, and the little man for a long time hated Val with a mingled scorn and loathing which were at times almost too much to bear. But he threw himself on the other hand enthusiastically on Gerard's side, and made a hero of him, and little as he knew, made some near guesses at the sort of storms which had passed through his soul. This intimacy with Gerard cost him dear, and yet gave him a sweet remembrance which I think will last his lifetime. He hung about Lumby Hall a good deal in those days, and a singular change was noticed in him.

‘I never had any feminine society, Mrs Lumby,’ he said on one occasion. ‘That is, I never enjoyed any lengthened period of home-life, don't you know, madam? and I feel the loss—the deprivation deeply. Now, it's a fact recognised even by the ancients, that female associations soften the manners. I can't say I think a lot of the ancients, as a rule, though they do make such a fuss of them at school and at the ‘varsities; but they were certainly right there; don't you think so?’ And so the bald-headed little man fluttered in conversation, in a manner altogether new and noticeable. He was nervous—he was hurried and flurried in his speech—and yet he would talk, and was so remarkably eager to be agreeable and complimentary, that he ran some risk of becoming a nuisance.

During one of Reginald's visits to Lumby Hall, two years after his sister's death, Gerard, unexpectedly entering his bedroom, beheld a sight which shook his sides with mirth. We suffer, and we think we shall never laugh more; but the days and the months go by, and the burden of grief is somehow lightened, and then comes a jest somewhere, and we laugh again as heartily as ever. Only perhaps the laughter leaves us a little sadder than before, and acts as though it were a signal to call the shadow back again. The good little Reginald, when Gerard came unexpectedly upon him, was in his shirt-sleeves, and was hard at work with some gruesome gluey substance out of a bottle, polishing his baldness with both hands, as a French-polisher works at mahogany. And, there on the table before him was spread each individual device of that great fraternity of knowing ones who gift the bald with liquid hair-seed at seven-and-six per bottle; a score of them, and nearly all unstoppered. Taking in the whole situation at a glance, Gerard fell against the door-post and lifted up his voice and screamed and laughed outrageously; and the little man, with his hands still at his head, turned round, and stared at him with a visage so rueful and amazed, that mirth became almost heroic in intensity. He smiled feebly at length, and went on polishing with a look of shame.

‘It's all very well to laugh,’ he said, when Gerard had done laughing, and in a condition of infantine weakness, was wiping his eyes, ‘you curled and golden young Anak. But how would you feel if you were a small cove like me? five feet four, and as bald as a billiard-ball! I don't believe any of 'em are of any use,’ he added

piteously. 'And this one'—indicating the bottle whose contents he had last employed—is so awfully sticky and sweet, that whenever I use it, the flies get at it, and I feel like a catch-'em-alive, O.'

'Don't,' said Gerard, raising a protesting hand. 'I can't stand it.' And suddenly the little man sat down with his hands well out from his garments, and laughed almost as heroically as Gerard.

'You don't go about in that way, do you?' inquired Gerard breathlessly at last.

'No,' said the little man. 'It's a self-imposed sentence of imprisonment to use it. It's very hard, because a fellow can't even lie down, lest he should stick to something; and besides that, I'd sooner be as I am, than bald in spots, as I should be if it made the hair grow, and I had rubbed it off in places. There is a dreary sort of interest,' he added, 'in sitting before a looking-glass and betting with yourself against any special fly making a landing.'

Lord Byron has noted the indubitable fact that laughter leaves us doubly serious, but this was a droll introduction to a love-confidence.

'Why do you inflict these absurdities upon yourself?' asked Gerard.

'Well, it's unpleasant to know that you're singular,' the little man responded. 'You feel ostracised from your kind, don't you know?'

'Rubbish,' said Gerard.

'Well, that's nonsense of course, and was meant for nonsense. But I don't want to look like Methuselah yet, and I get taken for all manner of ages.'

'Jolly,' said Gerard, 'I begin to think you are in love.' He had not the remotest belief that this shaft would hit the gold, or even the white, or he would never have loosed it.

'So I am,' said Reginald.—Gerard sat grave and silent.—'Why shouldn't I be?' asked the little man. 'I'm not Old Parr. And look here, Lumby, you can tell me perhaps whether I have a chance.' He looked guiltily at Gerard, and murmured: 'It's your cousin Milly.'

'I can't tell,' said Gerard. 'Go and speak to her. You have my best wishes.'

'It's horribly absurd, you know,' said the little man. 'Of course, it's awfully absurd. I used to watch Va—— Fellows I knew I used to watch, and I used to laugh at 'em no end. I never thought I should come to this,' he added, indicating the bottles on the dressing-table; 'but when a man's as far gone as I am, he'll do anything to make himself feel a little worthier.' When a man gets to so pronounced a badinage as this concerning himself, it is not easy for anything less than a hippopotamus to feel thinned. Gerard saw that the little man was almost hysterical in his desire to hide himself, and sauntered away, therefore, with an aspect of carelessness, repeating his advice.

In a quarter of an hour Reginald descended with no trace of his late pursuits about him, and seeking Milly, found her in the garden, plunged desperately into the question at his heart—and was rejected. She respected him—she liked him—she offered him a sister's affection. She let him down as gently as she could; and he went away sadly, and threw all the preparations out of window, and grieved. He announced his depar-

ture that evening; and Gerard of course knew the cause of it, and was very sorry for the staunch friend, and the brother of his dead love. Before Reginald went away, however, he spoke to Milly again.

'You're very good and tender-hearted,' he said; 'and when I'm gone, you'll very likely accuse yourself of having made me miserable. Don't do that,' he pleaded stoutly. 'I'm not going to pay myself the poor compliment of saying I don't care. Of course I care; but I don't know who it was, just now, but there was a lady of whom somebody said that to know her was a liberal education. And I shall be a better fellow for it; and I'm very much obliged to you for putting it so kindly.—Good-bye,' he said briskly; but the tears were in his eyes.

Mrs Lumby spoke of his departure, and asked Gerard privately if he could divine what had driven Reginald away. He, thinking his mother innocent of the truth, respected his friend's secret; but it was soon apparent that she knew it, and had but asked her question for an object of her own.

'Why has Milly refused so many offers?' she asked. 'Is there nobody in the world will suit her, or is she in love with somebody already?'—Gerard was silent; but something in his mother's face and voice recalled to his mind the time when Milly had clung to him begging him to abandon his purposed pursuit of his enemy. Whilst he was thinking of this, his mother returned to the charge.—'Can you guess who it may be, Gerard?' There was that curious something in her face and voice again; but he was not of that tribe of dandies who are ready at any mere hint to believe a woman in love with them.

'Why should I guess?' he asked, as lightly as he could, and rising, made as if to leave the room.

His mother arose also and stood before him. 'Can't you guess, Gerard?'

He stood a little awkwardly before her, and would have made any light answer serve to turn the question aside, if he could have found one. But none occurred to him. His mother's reiterated question seemed to point to him, and the remembrance he had in his mind gave him the same indication; but he was loath to accept it. To love and love's delights, his heart was dead. Love is not so poor a thing in all hearts, that a year or two can serve to bury it out of memory.

'Gerard,' she said, seeing him silent, and perhaps mistaking the slight traces of confusion which declared themselves, 'I have known it a long time. She began to care for you when—when your troubles began, dear.'

'If it is so,' he returned, 'you should have kept her secret, mother.'

'Oh,' she cried, a little wounded, 'you are not to think that Milly has spoken to me, or that she guesses that I know. But women see these things.'

'I hope you are mistaken,' answered Gerard; and having kissed her, left the room. He was not a young man from whom caresses came lightly, or often; and the kiss seemed to his mother to set a certain seal of solemnity upon his refusal. A day or two later, she began quietly

to question Milly as to the reason of her manifold refusals of eligible young manhood.

'You don't want me to go away, do you, aunty?' asked the young lady; and the old one entered a warm disclaimer. 'Let me stay with you,' pleaded Milly. 'I shall never marry,' she added.

'Until the right man asks you,' returned the old lady.

'Let us wait till he comes, dear aunt,' said Milly, 'before we say any more about it.' So the question dropped, and was no more reverted to.

YOUNG LIFE IN THE STREETS.

WHEN John Leech drew his 'Portraits of Children of the Mobility,' he considered them as the antipodes of the class represented by the word he was playing upon—the Nobility. The armorial bearings he drew for them are not to be found at the heraldic offices: First Quarter, Azure, a Tile dilapidated or shocking-bad Hat; Second Quarter, between two Clays in saltire Argent, in base, a Pot of Heavy frothed of the second; Third Quarter, Sable, a Bunch-of-Fives proper; Fourth Quarter, Or, a Neddy, Sable, passant, brayant, panniered proper, cabbaged and carroted Gules. The children born to these peculiar armorial honours are not, as the phrase goes, born with a silver spoon in their mouth; it has been aptly said, that if they were, the spoon would be transferred at once to a near relation, to provide something more nourishing to go into the mouth instead. When they are able to run about, they run into the streets, having been carried thither before by other babies; and there, to the casual observer, they seem to remain all the rest of their lives. Some of them play there; but these are the offspring of the higher mobility; others earn in the streets, others live in the streets, and neither the embrace of Charity nor the grasp of the School Boards can clear them thence to shelter. Most of them, alas! get shelter eventually for a series of lengthening periods—in prison. So we class young life in the streets in three simple divisions, under which all town-dwellers see it in their rambles—the children who play there, who work there, who live there.

The children at play make the bright side of the picture. They are worth watching. Their ingenuity, their animal spirits, their sublime power of 'making the best of it,' are all enviable. A dying merchant, looking from his window in old age and sickness, once sighed to give all he had if he might be the ragged boy at the opposite corner squabbling for marbles. Well, he too, in a figurative sense, had had his squabbling and his marbles once, and the boy had yet to come to age and labour or penury; for Fate deals, after all, with an even hand, and it may be that in many cases the blank, work-driven lives of the poor have a prelude of unusual recklessness of high spirit, and power of enjoyment where there is little to be enjoyed. They make the best of it. We have seen a poor child's feathered shuttle-cock, her only toy, go down into an area, and the child, after one melancholy peep

through the railings, was as gay as ever with a crumpled paper doing service instead. A little further on, inside another area railing, a goat was mountaineering, taking the cellar tops for the edges of a precipice; and there seemed to be something akin between the ready mode of 'making the best of it' in the dumb animal and in the uncared-for child. In the same spirit, not having green boughs to swing from, among flickering leaf shadows, they climb a lamp-post furtively to tie the rope, and fly round it with a shorter swing at each turn, till the final twist and collision. Moreover, like a large growth of spider, they spin their ropes across from rail to rail at doorways; so that the inhabitant who comes suddenly home in those romantic neighbourhoods, may have to wait till a living swingful of small nurses and babies in arms descend, and until the web of knots is cleared from the doorway, and the spiders sent to weave a barricade elsewhere.

The strangest oddity of child's street-play we ever found was carried on by a solitary little baby-boy, just able to jump with safety with both feet off the flags. He had a large doll for a partner, nearly as big as himself, held carefully with her toes on the ground; and without music or witnesses, he was slowly and solemnly dancing with the doll. Where had he seen couples dancing, and when, in his experienced babyhood? The question opens up infinite speculations, from the street-organ crowd to the organ-grinder's music in the hall at some home party—as it sometimes happens—or the 'Twopenny Hop!' Somewhere he had seen it, and profited thereby; and the simplicity of himself and his partner outshone the shepherd dances of Arcadia.

Child-life in the streets for the earning of a living, is no child's play. The picture darkens all at once when we come to that part of it, and darkens more and more until the end. Street-trading by children is not now so common as it was before the law made school attendance compulsory for at least some part of the year. In those days, the number of children earning a living by vending various articles in the London streets alone was computed to be far over ten thousand. Some counted them as nearer twenty thousand. One has only to turn to the pages of Mr Mayhew's *London Labour* to find in the accounts given by the children themselves, the extreme hardship of their lives. A little watercress-seller, eight years old, with no childish ways or thoughts, and with wrinkles in her face where the dimples ought to be, may be taken as an example of the sufferings of the very young, not only then, but in countless cases now. She sold watercresses at the rate of four bunches for a penny, making a profit of about fourpence a day. She had a home, and in this degree was in advance of many others of her class. But those who cherish children of eight years in brighter homes can best understand the terrible hardships implied in this poor little trader's account of herself. The watercresses had to be bought at Farringdon Market before six o'clock in the morning; and from six o'clock till ten, she traversed the streets to sell them, before tasting food. What simple eloquence of poverty is in a few of her answers to the questions asked by the compiler of the book! 'It's very cold,'

she replied, 'before winter comes on reg'lar—specially getting up of a morning. I get up in the dark, by the light of the lamp in the court. When the snow is on the ground, there's no "creases." I bears the cold—you must; so I puts my hands under my shawl, though it hurts 'em to take hold of the "creases," especially when we takes 'em to the pump to wash 'em.—No; I never see any children crying—it's no use.'

It would be a great mistake to imagine that young boys and girls are not still in thousands earning their way in the London streets with all the hardening results of street-life. The vast number of newspaper-boys and flower-girls is proof enough that, even before they are past the age of compulsory schooling, they find ways and means to trade in the streets for bread. And taking into account the immense increase of population, the number of young street-sellers cannot be regarded as very notably lowered merely because statistics are wanting. A child's earnings are reckoned to be less than sixpence a day, in return for which poor wages the little traders wander till late at night in the great public school of anything but high influence or good example. The costermongers look upon them as rivals; they say the children, as sellers, 'perverts others living, and ruins theirselves;' and at least one half of the jealous remark is too often sadly true. Large numbers of them have no settled dwelling, or the worst substitute for a home. Many take their meals in the streets, buying a 'penn'orth of pudding' as a sustaining dinner; and the homeless, or those that are afraid to go home with stock unsold, find a refuge in crowded lodging-houses, or hide in stairs or in the markets, or lie in some corner under a dry arch.

The children who live and have their being in the streets are of a still poorer and more numerous class, though some of them are included in the class of street-traders. They buy in the markets, and sell at the corners; but they more frequently live by their wits, dishonestly or honestly, by begging or by 'fiddling'—that is, doing odd jobs, such as holding a horse or carrying a parcel. They are the 'Arabs'—in the deepest sense of the word, the most pitiable of all classes; for they are adrift and alone in the world, eluders of all law, and hardly decreased in number by legislation. Their very faults can hardly be called their own, so untaught are they, and so doomed to misery, unless some agency of protection chances to lay hands upon them individually. Whence they come and whither they go, no one knows; the beginning and end of their existence are alike mysterious, miserable problems; we only see them in childhood—or the substitute for childhood—a ragged shock-headed crew, innumerable and interminable, distinguished from the sheltered poor by the absence of all shyness and by the cunning of self-dependence in a close struggle for daily life.

Jo, in *Bleak House*, forms the typical representative of the whole class, or at least of the hundreds that, in reference to the rest of humanity, are more sinned against than sinning, even in that untaught struggle for existence. Jo is a living portrait; there is not a touch of exaggeration about it; and some there are who hold that the boy crossing-sweeper, with his whole

life and character dashed in by a few touches, is the finest character-drawing the novelist ever did, and as noble preaching for humanity's sake as was ever found in a popular fiction. Jo's ignorance is extreme, but not without glimmerings, that faintly brighten and go out. His mind is a blank; but he has a conscience—God made him, and man neglected him. He is described in half-a-dozen words; we all have seen him—'very muddy, very hoarse, very ragged.' He can say for himself that he never got into trouble—'sept not knowin' nothink and starvation.' He knows that a broom is a broom, and that a lie is bad; and when he is requested to tell the truth, he has a forcible formula: 'Wishermaydie if I don't, sir!' There is one jewel in him, among the mud, the hoarseness and the rags—one diamond. He has a heart; he has gratitude. 'He was wery good to me, he wos!' cries poor Jo against his ragged sleeve, when the man who had said kind words to him, the nameless friendless man, is 'stritched'—dead. That part of the portrait may perhaps be disbelieved, but only for want of knowledge of the poor. If there is no warmth of feeling, no faithfulness, no gratitude, it is because there has been no sympathy. The deaf child that has never heard a sound, will never speak; the heart that has never been spoken to, will never answer the surrounding hardness with human feeling. The children of the streets are often hard, cunning, selfish. But why? They are struggling by their wits for existence; they have never met with kindness, softness, sympathy. No heart has spoken to theirs, and what wonder if they are mute? Yet, in the language of the heart, they could speak by word and deed, if we would but make them hear.

Some of the young 'Arabs,' if not as helplessly ignorant as Jo, have a ludicrous confusion of ideas in place of any knowledge. Mr Mayhew, to whose work we have already referred, catechised one or two of them and received replies, provoking something of mirth as well as pity. One bright youth was questioned about the battle of Waterloo, the Queen, Shakspeare—with surprising results. He 'hadn't heer'd of the battle of Waterloo, nor who it was atween;' but once lived down by Waterloo Road. Had no notion what the Queen had to do; but did not think she could do as much as the Lord Mayor or 'the Lambeth beak.' He associated the Immortal Bard with small illicit pawnbroking, for he 'had heer'd of Shakspeare; but didn't know whether he was alive or dead, and didn't care. A man with something like that name kept a dolly-shop, and did stunning.'

At some part of their career, the schools may do something to teach boys of this class; but often no school ever gets hold of them; and in any case, there is something needed far more than instruction in the three 'Rs.' The training to a Higher Life is what they need—the care for soul and body, the taking in, not the taking up. 'Beggars ought not to be encouraged,' says the Baronet to his little daughter Adeline, who is pitying beggar children beneath the window—some of the Children of the Mobility, drawn by John Leech. 'They have no business there; it is contrary to law; and I am surprised that the policeman does not take them up.'

'Take them up, papa!' says Adeline, the phrase producing an association of ideas in her youthful mind. 'Dr Goodman said in his sermon that we ought to take poor people in.'

The number of these destitute children—the poorest of the poor, having the streets for their dwelling-place, and living no one knows how—is a number counted already in London by tens of thousands, and yearly increasing, despite the many generous and noble efforts to shelter and save. As the writer of *London Poor* has summed up their case: 'What little information they receive is obtained from the worst class—from cheats, vagabonds, and rogues; what little amusement they indulge in springs from sources the most poisonous—the most fatal to happiness and welfare; what little they know of a home is necessarily associated with much that is vile and base.' How they live at all is a marvel. The refuse of the markets makes a large item in their daily fare. About eight o'clock on summer mornings, when the wholesale trade is nearly over in the rough-paved space round Covent Garden Market, crowds of these destitute children may be seen there, scrambling for the battered plums and other decayed fruit cast away as useless—one might almost say, as poisonous. And any Saturday, those who buy costly flowers and fruit in the bright vista of the market's bloom-laden central arcade, may see a vision of London poverty, if they will step outside, and make their way to the open, where the emptied baskets make flanking barricades. There are little children pinched in face and thinly clad, grave-faced women, groups of ragged boys, gathering the cabbage leaves and all the vegetable refuse from the street; every scrap, broken and half rotten, they turn over and judge slowly, with hungry eyes and anxious hands, and no heed for passers-by. The children carry off heaps of green stump and leaf, stuffed into bits of sacking, or looped up in the front of a skirt; and we have seen a whole grave congress of business-like young things, and pale-faced women, and hungry lads, assembled round a space strewn with the stall-sweepings of orange peels, sorting and picking up to carry away the bits of peel on which some pulp was left. So near the gay stream in the central arcade, so near the departing carriages, the sight suggests the old saying, that one half of the world does not know how the other half lives.

If we knew everything, even in the one small world of London, it would be heart-breaking knowledge. As George Eliot says, speaking only of the pathos of trivial incidents, if we had a keen sense of daily life, it would be like hearing the grass grow and the squirrel's heart beat, and we should die of that roar which lies on the other side of silence. But of what should we die, or rather how could we live, if we realised the life of the poorest, who rise daily to the same sunlight, and especially the life of the children of misery? When one sees some chance glimpse of it, the helpless remonstrance is, What can I do? But there are two ways of saying that word. What can I do! never did anything. What can I do? is reflective, energetic, hopeful, brave, ready for any chance, and counting no chance small. It means work, and does it. Nor

can the work ever be counted little, if it be the stretching of a loving hand, even for a moment, to aid in lifting young life from the mire.

MARJORIE.

AN OLD VIRGINIAN STORY.

IN TWO CHAPTERS.—CHAP. II.

LIEUTENANT EDWARD HARRADEN of His Majesty's 50th Regiment of Foot—a fine young fellow, with far more of the hearty Squire about him than of the typical officer of the day, was waiting that afternoon at a very familiar spot, situated just about half-way between the town and the barracks on Mount Pleasant. Of course he was waiting for Marjorie; and as punctuality is as rigid a virtue in love as in war, he had not to wait long before he espied a light active form, furs and ribbons flying, making the best of its way towards him through the deep snow, and in a few seconds was pressing his own honest face against the dimples and blushes of Marjorie's.

'O Edward!' cried the breathless girl; 'such fun before dinner! You know my tutor—Old Candlestick, as you call him—well, now, what do you think he's been and done?'

'Can't think, my darling,' replied the young officer.

'Well, what should you think was the most unlikely thing in the world that he would do?'

'Well,' said the young Englishman, after a pause, for, being a ponderous man, he was a ponderous thinker, 'I should think the most unlikely thing he could do would be to make love to you.'

'O you clever man!' exclaimed Marjorie; 'that's just what he has been doing. The impudence! I could have boxed his ears, as he stood there like a great fish. And you should have seen his face when I told him what I thought of him! Because, you know, he's been and sneaked to my father about our acquaintance; and you know that just as a red rag maddens a bull, so does a red uniform madden my poor old father. And you may imagine, Edward, what a talking-to I got last night! If I'd been a thief, I could not have got worse.'

'Well, never mind, my pet,' said the officer; 'he'll get over it. All the good folks about here look upon us as fiends. Give a dog a bad name, you know, and the rest of it. We hear plenty of it, and we've heard more than usual lately.'

'But, my love, what are we to do?' urged Marjorie plaintively.

'Why, my dear,' replied her swain, 'although I'm an Englishman, I can't help seeing that this horrid war will soon be over. Your people must be free sooner or later; and although I bear the king's commission, I don't see why they shouldn't be; and I can't think it right that two peoples of the same blood and language should be cutting each other's throats, as we have for the last seven years been doing. And then all your evil feelings will disappear; and I will go to your father, and tell him that I love you, and that I want you for my wife. And if he refuses, why—why, we'll run

away; and if he says all right, why, then it's all right.

'What a clever old dear you are!' said Marjorie, looking up in the young fellow's handsome face with proud admiration.

'How I wish, Marjorie,' he said, 'that your father wasn't such a prejudiced, strait-laced old fellow. We're going to keep Christmas in such style up at the Mount; but it'll be funny without any girls; but if he'd only let you come, all the other people would follow his example, for he's rather a big man, isn't he?'

'No; I'm afraid you won't get much Virginian beauty up there,' said Marjorie. 'You should hear how the women all talk against your people, just as much for fashion, I believe, as from genuine principle. But I *should* like to come.'

And so they sauntered on, chatting the too fast hours of daylight away, until the Lieutenant was reminded that his was the night-guard; and they went back to the Half-way Tree, as they called their trysting-place, and with one fond kiss, they parted.

After nightfall, the preparations for the *coup de main* were carried on quietly but actively in Alexandria, and no one was more active or energetic than the stalwart old farmer of Braddock's. He hastily swallowed his tea, much to the surprise of Marjorie, who was accustomed to see him linger over that meal as an important epoch of the day, and was out into the town and about the farms, enlisting recruits, holding consultations with his brother-conspirators, buying up all the muskets and pikes and swords and ammunition he could lay his hands upon, stirring up the lazy, cheering the few who were despondent, doing, in fact, the work of two men, despite his load of sixty years.

As might be imagined, Marjorie was much alarmed at the strange state of affairs at home—at the strings of carts and gangs of men laden with arms and mysterious packages which continued to pass in and out of the garden from dusk until after midnight, all in silence, and looking almost spectral in the dim lantern light.

'What does all this mean, Cicero?' she asked of the old negro.

'I dunno, Missy, I's sure; nebber see sich goin's on, nebber! Gemmans been runnin' up an' down stairs, an' in an' out jes like de flies in de molasses pot.'

She then asked one of the workers.

'Why, bless your heart, Miss,' replied the man, 'we're a-goin' to do away with the Britishers, that's what we're a-goin' to do;' and accompanied his answer with winks and head-shakings which spoke volumes.

'Do away with the Britishers!' repeated Marjorie to herself. 'That means fighting, and murder—and perhaps Edward, or father'—and a terrible cloud of thoughts came over her mind. 'Oh, how happy we could all be,' she thought, 'if people had no such things as prejudices!'

Meanwhile, her father was returning from the house of one of the confederates, which stood a little beyond the other side of the town, on the road to Mount Pleasant, and was not a little surprised to meet the Rev. Nahum Bond, who was evidently in a great hurry. Had it not been pitch-dark, he would have noticed, too, that the minister was equally surprised and rather

confused at seeing him; but the young man was quick at recovery, and said: 'Just whom I wanted to see, Master Hood. I am sorry to say anything that may offend you, but I feel it my duty to warn you against your daughter.'

'Lord! man,' exclaimed the old farmer, 'what has the wench been doing now? Laughing at her tutor?'

'Nay, nay, Master Hood,' replied Nahum; 'it is no light matter. I speak not of what she has done, but of what she may do. She knows perfectly well what our project is; she loves one of the men against whom we are to work; she met him this afternoon. Put two and two together. Good-night!' And he was lost in the darkness.

For a moment the old man stood bewildered. Then he smote his brow and muttered: 'What a fool I have been not to send her away! Of course I see what the parson means—that she will betray us—and yet I dare not think that she would do so. Her love for the red coat may be strong, but it would be strange if her love for her father and her country were not stronger. However, I will see her.' And he strode on homewards.

Marjorie met him at the door with a frightened face. 'O father, I am so glad you have come,' she cried, throwing her arms around his neck; 'I am so frightened. Tell me what all this means—these guns and swords and bullets, and all this quiet and secrecy.'

Her father gently removed her arms from his neck, and held her out at arms-length, looking keenly into her deep brown eyes, in each of which a tear glistened. 'And you mean to say, Marjorie, that you know nothing about it?'

'Nothing, father, but what Abram Stoke told me just now about doing away with the Britishers,' answered Marjorie.

'And you did not tell Mr Harraden about it, when you met him this afternoon?'

'I did not know it, father—indeed, I did not; and if I had, I do not think that—that—'

'No, no, no!' exclaimed her father, kissing her; 'I don't believe you would.'

'But tell me, dear father,' she said, 'is there to be fighting and shooting and murder? Oh, I am so terrified! Suppose you were to be killed, and suppose—suppose he—you know I can't help loving him, and so would you, if you knew how good and kind and true he is.'

'Tut, tut, lass! never fear,' replied the old man; 'these are not things for girls to be talking about. It's time for you to be in bed.—Good-night, my love; I have much writing to do.'

Marjorie went sadly enough up to her room, and in truth hers was not an enviable position. A dread was on her that something terrible was about to happen, something in which the two men she loved beyond all others in the world were concerned, and she could do nothing to prevent it. At one time, she determined that she would warn her lover of the danger; but the image of her stern, patriotic father, and of his wrath at what he would assuredly term betrayal, came before her. Then she resolved to throw herself at her father's feet and to implore him to abandon his design. Her thoughts were interrupted by a knock at the door; and in answer to her 'Come in,' the woolly head and

ebony countenance of Cicero appeared: 'Please, Missy, massa want you. He's in a debil of a rage.'

Marjorie went down, and found her father striding up and down the little room he styled his study.

'Marjorie,' he said, in a voice which was scarcely coherent for passion, 'if I was to shoot you on the spot, it would not be more than you deserve.' These were terrible words for a father to address to his child, and still more terrible when they came from a father who loved his child so dearly as Jeremiah Hood loved Marjorie.

'What—what do you mean, father?' asked the terrified girl.

'What do I mean, girl? You know very well what I mean. Read that!' and he threw on the table towards her a small scrap of paper.

She read: '*You are betrayed. Be warned in time.*'

She could not recognise the writing, nor was there any signature to this laconic epistle. Turning it over, she saw in smaller letters: '*The penalty for concealing arms or for harbouring revolt is immediate death and confiscation of estate.*'

'But, father,' said Marjorie, 'I have had nothing to do with this. Surely you do not think that I have betrayed you?'

'Not a word more,' said her father, raising his hand; 'I know that you have betrayed us. You will keep your room until I find means to send you to Connecticut.'

'But, dear father, hear me, I beg of you. Hear your daughter, your Marjorie, whom you say you love,' cried the girl in piteous tones.

'Silence!' said Hood in a stern voice. 'Did I not love you as I do, you would ere now have been lying where you now stand. Obey me, and go.'

Poor Marjorie left the room crying bitterly; and her father went out to tell the news to the confederates.

Next evening, Alexandria lay sound asleep in her mantle of snow as the clock struck midnight. It was the 24th of December 1781. A few lights from the ships by the quay-side, and from the *Royal George* and *City* hotels, were the only indications of a town visible from the British huts upon Mount Pleasant. In these 'good old days,' folk kept reasonable hours, and except upon such special occasions as a birthday night or a subscription ball, as a rule retired to rest about the same hour that their modern posterity are at dinner. But upon Mount Pleasant there was activity, and moving about of lanterns, and buckling on of knapsacks, and buttoning up of gaiters; and ere the twelfth solemn note had died away, a hundred men were drawn up in motionless array upon the little parade-ground. At a few minutes past the hour, the word was given; the company faced to the right and commenced to tramp through the thick snow towards the sleeping, unobscured town beneath them. At their head marched the Colonel, and by his side a tall figure muffled in a long cloak. They did not march by the direct route to Alexandria; but in order to avoid passing through the town, chose a back-path, which in the course of half an hour brought them at the gate of Braddock's.

Here the guide—he of the cloak—would have left them; but the Colonel held him fast by the collar. 'Nay, my good fellow,' he said; 'not so fast. Perhaps you are playing us false.—Lieutenant Harraden, take a sergeant and two file and enter the house.'

The Lieutenant saluted; and with his men went up to the door, while the remainder of the company 'stood easy' in the garden, bayonets fixed and muskets ready. In obedience to his knock, Cicero opened the door in his usual cautious manner; but a kick from the foot of the sergeant hurried his movements, for it sent the door flying open, and poor Cicero all but sprawling on the polished oak floor. The Lieutenant—whose feelings may be imagined at making such an entry into the shrine of his goddess—walked in, and requested the rueful Cicero to show him into his master's room.

'Massa hab go to bed dis tree hours,' said the scared negro.

'Very sorry,' said Harraden; 'but I must see him.'

As a rule, it was as much as Cicero's place was worth to disturb his master during even his afternoon nap; but the vision of the redcoats in the garden urged him to sink all reluctance in the matter; and in a few minutes a heavy step was heard descending the staircase, and Mr Hood appeared, clad in night-shirt, greatcoat, and slippers.

'Very sorry to disturb you at this time of night, Mr Hood,' said the Lieutenant politely; 'but I am acting under orders, and I must ask you to show me the way to your cellars.'

'Who are you, sir?' asked the old man scornfully.

'I am Lieutenant Harraden of His Britannic Majesty's Fiftieth Regiment of Foot.'

'Hm! Harraden. Fiftieth Regiment. Kent name and Kent regiment. I'm ashamed of you, sir; but as I see you have force at your back, I suppose I must obey.'

He led the way down to the cellars. The men searched high and low, sounded floor and walls with the butt-ends of their muskets; but not an arm of any kind could they find.

The Lieutenant reported matters to the Colonel. That officer, who was smoking a pipe in Jeremiah Hood's study, fumed and raged. 'Call in that rascally spy,' he said.

The sergeant went out and returned with Nahum Bond, almost dropping with shame and terror. The old farmer's feelings may be imagined when he beheld his ideal man, the destined husband for Marjorie, before him; but he could find no vent for his disgust in words; he simply sat down and groaned.

'Didn't you say that there were arms and ammunition stored here, and that an attack upon our position was to be made to-morrow night?' roared the Colonel; and without waiting for whatever answer the trembling traitor could have given, continued: 'Of course you did.—Sergeant, do your duty.'

Nahum was dragged out; and before the old farmer could interfere, the stillness of the outside world was broken by the discharge of half-a-dozen muskets. There was one cry, and Nahum Bond had paid the penalty of his double perfidy with his life.

'You will remain here, Lieutenant Harraden,' said the Colonel, 'until we receive marching orders.'

He went out. The rattle of unfixing bayonets was heard, and in a few minutes the garden was empty, save for one stiff rigid figure, with eyes wide staring up into the starlit heavens.

The old farmer seemed to have fallen into a stupor, but the departure of the troops awakened him. He rose and approached Harraden. 'You are the gentleman I believe, sir,' he said, 'with whom my daughter is acquainted.'

'I have that inexpressible honour,' said the young officer. 'And in return for the service I have rendered you to-night, I have to beg that you will bestow on me her hand.'

'Service, sir! What service?' exclaimed the astonished old man.

'Did you get a note, warning you that you were betrayed?' said the Lieutenant.

'I did, sir. And what then?' replied the old gentleman.

'I wrote that, sir,' said Harraden. 'And I wrote it at the expense of my honour as a British officer, out of my great love for your daughter. It has given you time to get your cellar cleared of the arms stored there. We shall leave Alexandria in a few days, so that there will be no need for you to meditate a continuance of your design. Had I not warned you, the consequences—well, you know what the consequences would have been. Moreover, Mr Hood, remember that I exposed that double-dealing traitor who lies outside in the snow. I'm obliged to blow my own trumpet a bit, because I know how strong your prejudices are against my country. Yet after all, Mr Hood, there is something even thicker than the mere fact of being Englishmen, between us. You surely can't forget that the Hood and Harraden estates have lain alongside each other in old Kent for centuries.'

The simple heartiness of this appeal touched the old man's heart. 'I'm an old fool,' he said, rising, 'to be meddling in these sort of affairs at my time of life. I am quite sensible of the services you have rendered me; and if you ask me as a reward that'—

At this moment the door was pushed timidly open and Marjorie's terrified face appeared. She had heard the sounds of angry voices and the report of the firearms, and had been quaking in fear upon the landing above; but when she saw her father and her sweetheart with their hands joined in the middle of the room, she uttered a joyful cry and sprang towards them. 'Oh, I have been so afraid!' she said; 'I heard such angry talking and the sound of shooting, and I was sure that one of you had shot the other.'

'Nay, lass,' said her father. 'Mr Harraden has saved us all from ruin and disgrace, and that double-faced villain Nahum Bond has been shown in his true colours. He was, I find, what you called him—a sneak, and something worse. Now, then,' he said, nodding his head towards the British officer, 'sweetheart together as much as you like.'

Mount Pleasant was evacuated by the British in the course of the week; and everybody knows that a treaty of peace was signed in less than a year after these events between Great Britain and the United States of America. Edward

Harraden retired from the army, returned to Alexandria, married Marjorie, and was soon one of the most popular men in Virginia. Many and many a pipe did he and the old farmer smoke over the International Question; but upon Christmas nights, when the curtains were snugly drawn and the logs crackled cheerily upon the hearth, they mutually sank all differences of opinion, told the story of Nahum Bond's treachery over again, and agreed that circumstances had after all turned out for the best. And when at length the old man died, Edward transported his wife and two pretty children over the Atlantic, and finally settled down on the ancestral estate in Kent.

NOTES ON CONTINENTAL TRAVEL.

IN TWO PARTS.—PART I.

AMONG many reminiscences of bygone times, not the least happy are those of such a journey between Geneva and Paris, albeit the route was in itself as barren and uninteresting as might be. It was a sharp, biting, comfortless-looking October morning when we left Geneva, and looked our last at its busy streets, pretty villas, intensely blue lake, and the numerous washing-boats, where the stout matrons and maidens of the place did so mercilessly belabour the linen surrendered to their blows. We were amply provided with books, work, travelling-chessboards, and all the remedies against ennui that could be stowed away in the pockets of a most comfortable travelling-carriage—*une grosse berline*, as they called it at the hotels, where its capacious dimensions and powers of accommodation excited great approval. With these resources, we might have made ourselves happy, notwithstanding the raw chilly weather and the anticipation of a long journey; but there was the custom-house, that bugbear of tourists with the lightest consciences. Until that ordeal was passed—and we were not to reach the frontier till pretty late in the day—book or work failed to interest. Like the sword of Damocles, it disturbed our peace while it hung over us.

Dire were the tidings of this formidable *douane* that circulated round the *table-d'hôte* of the hotel the evening before we started.

'The strictest in all Europe,' said a grave-looking gentleman in black at the top of the board.

'You may well say that,' exclaimed a little fiery Frenchman, with a gray head, and small black eyes very inflamed and red about the lids, which glittered like live coals when he spoke. 'I crossed the frontier last year with my wife, a delicate, timid little woman. Well, Monsieur, those custom-house women, they carried her off into an inner room; they searched her, ripped up the very hems of her gown, to discover lace or jewellery in them; stripped off her clothes, the fiends, and would not let her maid near her. They thought to shut me out too, saying a man had no business in their *appartements*; but I forced in the door, *allez!* and found my poor *petite* half dead with fear in the hands of these two female ogres. We soon had the place to ourselves. When I am once put into a passion, I am pretty well in earnest, I can tell you; and so the *douaniers* found out.'

'Bah!' said a young man who sat next us, and who seemed vexed at the dismayed attention with which the tirade of his fiery-eyed compatriot was listened to—'bah! What signifies what he says! *Soyez tranquilles, mesdames*; no one will treat you with disrespect. English travellers and with your own carriage—very different from diligence passengers like him, forsooth!'

Notwithstanding this and other reassuring speeches, we felt somewhat disturbed when, descending into a rocky valley, the postillions turned round in their saddles, pointed forward with their whips, and announced 'Les Rousses.'

There was no town or village to mark the frontier. A shabby little inn stood on the roadside, about the door of which were grouped the *douaniers*, awaiting their prey. They were all on the alert as we drove up; and the carriage had scarcely stopped when the *chef* had the door open, the steps flung down, and his arm offered in the most gallant manner to help us out. Nothing could be more unlike the ideal of a gruff, surly custom-house officer than this individual. He was a small man, with a smiling countenance, and a carefully waxed moustache. With the greatest politeness, he requested the keys, begged to know whether we had anything to *déclarer*, entreated *ces dames* to be under no sort of uneasiness about their *toilettes*, as nothing would be tossed or spoilt—they might rely upon him for that—and ended by showing us into the house, where he trusted we would dine comfortably and rest for an hour, leaving everything to him. In short, if this very amiable personage had not been a custom-house *chef*, and if, while he was uttering his courteous speeches, and so gracefully doing the honours of Les Rousses, we had not beheld the work of spoliation rapidly going on upon our poor carriage—pockets ransacked, books examined; imperials, boxes, and bonnet-cases untrapped, and borne off between blue-frocked, red-capped men, under an escort of *douaniers*, to the great barn-like building where they were to undergo inspection—in short, but for all this, we should have been enchanted with our polite friend.

On entering the frontier inn, we found ourselves in the kitchen, where they were fussing about preparing dinner. A large fire blazed in the open chimney, looking very pleasant on that chill October afternoon; a contrast to the small room inside where the table was laid—so bare and comfortless it looked, with its dreary white walls, white ceiling, white cloth, white plates and dishes, white napkins. The very floor was painted white, without an atom of rug or carpet. After a few minutes, we quitted its cold exclusiveness for the more genial atmosphere of the kitchen outside. Here was a fat elderly gentleman seated by the fire, who politely drew back his chair, and of course—for he was a Frenchman—began to talk.

'Ah ça, Mesdames, you have just arrived, and the *douaniers* are as busy as bees. I too have come to-day from Geneva, a long journey. Such a searching as they gave me, *ma foi!* I don't feel the better for it. They kneaded me as if I were a lump of dough; watches and trinkets, you see, are so small and so easily smuggled; and these men are desperately suspicious. More than that, they prodded me with long pins they have for the purpose, to see whether I had anything concealed in the lining of my clothes. Many

a brooch and set of studs has crossed the frontier in that way before now, *allez!* The *douaniers* are up to every trick by this time, however. They have the ladies searched too, Mesdames. Has your turn come yet? A woman does that.—Ah, here she comes while of her we speak.'

A forbidding-looking woman did make her appearance, at that moment. 'Perhaps,' we thought with a shiver, 'the very same who so rudely maltreated the poor little Frenchwoman.' She proved, however, to have no more fell intent than to stir the sauce for the cutlets. But we had had enough of the fire and the conversation of our garrulous friend, and so beat a retreat into the cold white room.

With the dessert, our graceful *douanier* made his *entrée* cap in hand. He laid the keys on the table, and presented a paper with a list of things on which duty was to be paid, assuring us that the various small articles and nicknacks about which we were so anxious had all been safely restored to their places. This we afterwards discovered to be the case; not one was lost.

After leaving Les Rousses, the road increased in wildness. Evening was closing in as we slowly toiled up one of the rugged passes of the Jura Mountains; and when we reached the top and stopped to breathe the six horses which had dragged us up, the scene all around was savage and picturesque. Here four of our horses were withdrawn, and with two only we started for the descent of the mountain pass, a wall of perpendicular rock rising on our right, and on our left a precipice. It was growing dusk, and we were tired and half asleep, so that, notwithstanding the jolting and the increased pace, we were not aware that there was anything wrong. Soon, however, we were roused from our torpor. 'They are all lost!' shouted a couple of men who came running after us, and whose appalled looks spoke more than their words.

We were indeed in a fearful predicament. The road, at all times steep and difficult, was now especially dangerous, from being utterly out of repair. It was about to be abandoned for a new one, to be opened in a few days, so that probably we were the last travellers over this condemned pass. It very nearly proved the scene of our last journey over any road rough or smooth; for now we were every moment getting closer to the yawning precipice. Our drag-chains had snapped; and the carriage, too heavy for a single pair of horses to keep straight, was running towards the edge, dragging them with it. In a few minutes more it would have been over, and dashed to pieces! Just then, the men whose cries had roused us up, succeeded in overtaking us. They seized the wheels, pulled the postillion, stupefied by terror, off the horses, and made him give his assistance; tore open the carriage-door; and at last, by the united efforts of all parties, biped and quadruped, the ponderous vehicle was dragged back from the brink.

After this providential escape, we dared not trust again to one pair of horses, though we were told more were never put on in descending this pass. Had the road been in its usual repair, and the carriage less heavy, there would have been no risk or difficulty. A messenger was despatched to the foot of the mountain for two more steeds; and we proceeded on our journey

and reached our sleeping-place, Saint Laurent, without any other adventure.

How delightful, in those bygone times, was the arrival at a comfortable inn after long journeys such as I am describing; when the chilly autumnal evening having set in, we arrived weary and half asleep, cold and hungry, at our destination. How cheerful the bright wood-fire, piled high, and crackling in the open chimney; how grateful the warmth to numbed feet and fingers! And then the appetising nondescript repast, half-supper, half-dinner. In the centre of the table rose the inevitable pair of tall white *cafetières*, flanked by clustering cups; one of them filled with rich country milk just 'off the boil'; the other with coffee, hot, strong, and fragrant—such as is seldom tasted out of France—reviving and delicious to tired travellers. The savoury roasted partridges, and smoking dish of *pommes de terre frites*; the tempting *côtelettes* and apricot omelet; the fresh eggs, delicate rolls, pats of butter, and golden honey, all discussed with an abundant seasoning of Spartan sauce. The incidents of the day are talked over. Pretty 'bits' on the road—villages, peasants, sunsets, and moonshine, all look better and brighter, reviewed now by the light of the merry blaze, and called to mind over the well-spread table.

But in spite of refreshing coffee, reviving warmth, and roadside recollections, fatigue and sleepiness will make themselves felt. And then how luxurious to stretch the weary limbs in beds so proverbially excellent as the French; where even in the humblest village inn, the woollen mattresses are so well constructed and clean, undergoing as they do, annually or bi-annually, a thorough unripping and re-making; where the sheets and pillow-covers, often trimmed with coarse lace, are the whitest of the white and the finest of the fine; and where the only drawback was the prospect of having to get up and leave that snug nest at six o'clock the next morning.

The close of another day's travelling brought us to Montbard, a considerable village, or rather small town. We were fortunate in having it as our place of rest for Sunday; for besides being very prettily situated and possessing some local interest, its little rural inn, *Point du Jour*, was snugness itself. A French family of some importance, from the Faubourg St-Germain, were staying at the inn, having come to Montbard to visit their estates. The rencontre with them cost us a maid; for the charms of our abigail, who was a pretty young Londoner, made such fierce havoc in the heart of their chasseur, that he found her out afterwards in Paris, and presented himself, resplendent in a green and gold livery, and headgear surmounted by a wondrous plume of feathers. A six months' courtship was the consequence. How it was carried on, we never could imagine; for he knew no English; and her few French phrases appertained not to Cupid's vocabulary, but to vulgar necessities of life, such as 'hot water,' 'more towels,' and so forth. However, he managed to make her understand that he had saved money enough to set up a confectioner's shop in the Rue St-Honoré, and to persuade her to become his wife and preside over it.

Our Sunday at Montbard was most enjoyable—

one of those bright genial days of autumn, when the glowing tints and rich colouring of the season are gilded and lit up by warm sunshine, and all nature looks smiling and glad. We loitered away an hour after breakfast in the garden belonging to the inn. It was a pleasant sunny place on the side of a hill fronting the south, and contained an abundant supply of vegetables, flowers, and fruit-trees, with great patches of those sweet herbs which the French use so largely in their cuisine.

In the course of the day we sallied forth to explore the town and to visit an interesting château in the neighbourhood. How different all looked from an English village on the Sabbath day! The church was open, it was true, and the people in holiday attire, but on all sides the usual week-day business of life was going on. The village forge was in active operation, a crowd gathered round it; and some very exciting piece of gossip seemed to be on the tapis. The blacksmith, a fine young fellow, whose snow-white Sunday shirt-sleeves contrasted strongly with a smuttied face and coal-black hair and eyes, stopped in his work, eagerly gesticulating. His animated figure looked doubly on the *qui vive* beside the quiet, patient, dozing old horse standing motionless on three legs—the fourth in the hand of the blacksmith.

The château to which we were bound was the family mansion of a no less celebrated personage than Buffon. The proprietrix was the widow of his son. The latter had been guillotined in the French Revolution, and here his bereaved wife was in the habit of spending several months of the year in seclusion. She was now at her *hôtel* in Paris, and the house was shut up. It looked like most French châteaux, dull and formal. On a terrace in front was ranged a long straight row of orange-trees in boxes, not yet removed to their winter-quarters. A few blossoms remained on them, poor shrivellings, but still retaining their delicious perfume.

Apart from all the charms of association, the grounds of the Buffon Château were pleasant to ramble through. There were winding walks in the wood, thickly strewn with a deep rich carpet of red leaves, elastic to the tread, and emitting a delightful fragrance. One of these walks led to a temple or summer-house built on a height, with a background of tall trees. The old man who accompanied us paused reverentially before the building, and said: 'This was the great Buffon's favourite resort. He used to bring up his books and papers to this retired place, and it was here he studied and composed his works.' From this gray-headed old follower of the family, who had the charge of the château during Madame Buffon's absence, we expected to hear some particulars concerning the great naturalist beyond those to be found in his biographies. But he was silent and uncommunicative. The fate of his late master seemed to have deeply touched the old man, and to have substituted a melancholy respectful air, in the stead of the usual garrulity of his age and nation. He told us that his father, grandfather, and great-grandfather had been in the service of the house of Buffon. We called to mind the anecdote of the author and his attendant recorded in the *Memoirs*, but failed to elicit any more about it from this, the descendant no doubt of the servitor in question.

Buffon, his biographers tell us, had an aversion to early rising amounting almost to constitutional infirmity. He resolved to conquer it, and formed a thousand good resolutions, broken as often as they were made. The valet who attended him was strictly enjoined to rouse him in the morning, and not to desist until he had thoroughly awakened and induced him to rise. All failed, however. To his mortification and chagrin, the naturalist found himself day after day waking to self-reproach, and the sense of time lost and opportunities of study gone by. He bitterly accused his servant of neglecting his orders by allowing him to sleep.

'But Monsieur,' replied the man, 'you are so angry with me when I call you! You abuse and drive me away; you command—threaten! It pains me. I get ashamed to persevere, and dare to torment you no longer.'

'Have I not told you a thousand times,' exclaimed Buffon, 'not to mind my anger—not to listen to my threats? Have I not ordered you to rouse me, shake me, pull me out of bed?—Stay,' added the philosopher, as a new idea occurred to him; 'every morning that you have me up at the desired hour, I shall reward you with a *douceur*. Ten minutes beyond that, and not a sou do you touch!'

This argument was all-prevailing. From that day forth the valet gained money; the master, time; and posterity, instruction. 'Most probably,' we thought, as we explored the deserted summer-house, 'this temple was the place where the hours wrested from sleep were spent; and the father of our taciturn old guide was probably the servant whose morning task was at the same time so painful and so profitable.'

'LUCK.'

AN article formerly appeared in the pages of this *Journal* (No. 867) with the above heading; and the following additional instances of persons who, alone and unassisted by friends or capital, have yet succeeded in building up substantial and independent fortunes—one of them being a relative of the writer's, and the other persons well known to his family—may interest some of its numerous readers.

A——L—— was the third son of a gentleman who ruined himself some seventy years ago by numerous speculations. As the latter had a large family, it became a difficult matter to start his younger children in life. A——, however, received a thoroughly good education at the Edinburgh High School, and at the age of sixteen was sent by his father to London, where he arrived with only a sovereign in his pocket, and the knowledge that it would be in vain ever to apply to his father for further help. The lad's great desire was to become a lawyer. But how could he ever obtain his articles? However, he managed to get employment at a well-known firm of solicitors as a copying clerk; and eked out his small salary by copying legal documents out of hours. In this way he managed in time to make upwards of two pounds a week; and that sum realised,

he persuaded his cousin Mary, an orphan without any fortune, to whom he had been engaged before leaving the North, to become his wife. They were little more than boy and girl; but there was no one at hand to protest against such a seemingly imprudent alliance.

She shared her boy-husband's labours, assisted in the copying of legal papers, and was in all ways a helpmeet to him. At last there came some conveyancing work to the office with a number of old deeds to be looked through, and one of these, in its antique spelling, was undecipherable alike to the heads of the legal house and all their clerks. A——L—— heard the discussion about this deed in the office, and at length modestly requested to be allowed to take this obscure one home with him to his lodgings. The request was granted, for the senior partner had long marked the ability, as well as steadiness, of his young copying clerk. A—— did unravel the mysteries of the deed; and his employer was so pleased with him, that he at once presented him with a gift of thirty pounds, telling him he ought to be artied; and that could he but manage the sum needed, he should be very pleased to take him into the office as an artied clerk.

This was a difficult matter to accomplish; but at that time there was in London a cousin's cousin, whose mother's family were also Scotch and north-country, who subsequently became one of the two founders of the Peninsular and Oriental Steam Company, and represented a large seaport in parliament; and he consented to lend A——L—— the five hundred pounds needed in those days for his articles.

It was a time of stern economy to the young married pair, and all they had to live upon was the copying he and she could do out of office-hours; and she would often exclaim in after and affluent days: 'Oh, A——, it *was* a struggle; you kept me very short, and worked me very hard.' And he would supplement her remark by adding that had he his life over again, he did not think that he could do all the work he did then.

He paid his kinsman honestly, interest as well as principal; and by the time he was forty-five, he had such a legal business of his own, that he could afford to keep a fishing-lodge in Scotland, and lived in a country-place within daily access of London, where he kept his keepers, and enjoyed his sport at times with the county gentlemen around. He was well known in the Hampshire streams, for fly-fishing was his great delight, and his anecdotes and keen remarks made his company much sought after. In his latter years he prided himself greatly upon the quality of the wine in his cellar; but he kept some of the frugal habits of his youth throughout his life, and left a large fortune.

J——G—— was apprenticed to a saddler in a suburb of London. He proved himself steady, trustworthy, and industrious, and in time became foreman of the shop; and when his master died, he in due course of time married the widow, and owned with her the snug little business. One day he was sent for to see to the repairs

of some leather straps connected with some machinery. His quick intelligence and keen eye at once perceived a much better way of working it. This discovery was the beginning of his fortune. He invented some machinery for making crape, and in time he realised a fortune of twenty thousand a year. It is told of him when dwelling in a large park, and seeking to live a country gentleman's life, that he would sit at the open drawing-room window gun in hand, while the keepers drove the deer across for him to get a shot! He and his wife kept their simple quiet personal ways in the midst of all their splendour, and were so unassuming and generously kind and hospitable, that they escaped the vulgarity often ascribed to the 'newly rich.'

J— B— was a respectable citizen of London, who in a venture lost his all, and retired to the country to live quietly on a little independence belonging to his wife. He did not like this state of things; but there seemed no opening for the commencement of any business. He had some knowledge of chemistry, and a taste for making experiments with it, and thought he would begin the tanning of leather by some process of his own, and see if any money could be acquired in that way. He exhausted all his small capital, and there was no sale for his hides. An old City friend, an alderman, who possessed a country seat near the place where J— B— had set up his tanpits, heard how the leather hung on hand, and asked: 'Why not make your leather into shoes? Few persons care to buy, or know what to do with hides. Every one must wear shoes.'

The difficulty was the want of capital; but J— B—, nothing daunted, with his two sons, lads just come home from school, and the assistance of a village cobbler, set to work. The lads soon outstripped their instructor, adding intelligence to diligence, and the result was that their shoes sold faster than they could make them; and in time as their business increased they not only sold thousands of pairs throughout England, but the demand for them in Australia became very great. J— B— died a wealthy man; and his two sons carried on the business, and in time, having realised huge fortunes, sold out and retired. Unfortunately, they had no resources of amusement, or occupation in themselves, and the loss of an object to take up their time and give them an interest in the affairs of life, at length so pressed upon them, that they, at the end of a short period of this enforced idleness, repurchased at an enormous cost the factory but lately sold; and at the present time they employ at least a thousand pair of hands in the making of boots and shoes.

These instances of success in business might be multiplied to a great extent. They may be by some put down to 'luck;' but they show undoubtedly industry, perseverance, a readiness to use any opening that presents itself, and other qualities, without which no mere 'luck' would in the long-run serve any purpose. We frequently come across instances of remarkable vagaries of fortune; but in most cases there is no doubt that the secret of success may be found in the old and true axiom, 'Heaven helps those who help themselves.'

THE WELL OF ST KEYNE.

THE amusing legend of the Well of St Keyne, as told in verse by Southey, has obtained a widespread celebrity. The comical anecdote which we are about to relate—and which we are assured actually happened about thirty years ago—may be called a supplement to Southey's ballad, and may be taken as an instance of the wonderful readiness of woman's wit, when she happens to have a special point of self-interest in view, and which she is pre-determined to carry at all risks.

We will, for the better understanding of the story which follows, briefly state the chief points of the legend, just premising that the famous Well is situated in the parish of St Keyne, about three or four miles from the town of Liskeard, in Cornwall.

Southey's ballad opens with the following verse:

A Well there is in the West countrie,
And a clearer one never was seen;
And there's not a wife in the West countrie
But has heard of the Well of St Keyne.

A traveller, thirsty and hot, arrives one summer's day at the Well, and takes a deep draught of the cool refreshing water; and whilst he is resting, a peasant comes up to fill his pail, and earnestly regarding the stranger, at once bluntly asks him the following, apparently unaccountable questions: 'Is he a married man? Because, if so, the draught he has just imbibed is surely the happiest he has ever drunk in his life. Or has he a wife? And if so, has she ever been in Cornwall?' Adding, with much energy, this positive but curious assertion:

For if she has, I'll wager my life
She has drunk of the Well of St Keyne.

The traveller, naturally surprised and puzzled at the odd questions, replies that he has been married many years, but that his wife has certainly never been in those parts; and then desires to know what constitutes the special benefit said to be conferred upon him by drinking the water. The peasant then tells him the legend in the following pretty verses:

'St Keyne,' the Cornishman said in reply,
'Oft drank of this crystal Well,
And before the angel summoned her,
She laid on its waters a spell:

'If the husband at this gifted Well
Shall drink before the wife,
A happy man henceforth is he,
For he shall be master for life.

'But if the wife shall drink it first—
Lord help the husband then!—
And the traveller stooped to the Well of St Keyne,
And drank deep of its waters again!

The last two lines exhibit an amount of prudence and forethought highly to be commended on the part of the astute and cautious traveller, who, it will be observed, although he had already drunk copiously of the crystal spring, resolves to place himself entirely on the safe side, and make doubly sure, by drinking 'deep of its waters again!'

The traveller then playfully rallies the peasant, by supposing—as a mere matter of course—that he had taken care to get a drink of the water

in good time after his marriage; but was rather surprised to find that

The other replied as the stranger spoke,
And sheepishly shook his head:

'I hastened as soon as the wedding was o'er,
And I left my poor bride in the porch;
But, alas! good sir, she'd been wiser than I,
For she took a bottle to church!'

Here, then, was a specimen of sagacious forethought and ready wit, quite worthy of that dainty sex

Whom man was born to please.

But although this exhibits a brilliant idea as brilliantly and cleverly carried out by the quick-witted bride, we are inclined to think that the circumstance about to be related is quite equal to it, if not superior in some points.

The story goes that, about thirty years ago, a worthy couple having determined to enter the holy estate, and each having the usual desire to obtain the 'whip-hand' of the other for the rest of their natural lives, secretly resolved—of course unknown to the other—to follow in the footsteps of Southey's clever heroine, and, like her, each to 'take a bottle to church.'

The happy day arrived, and the wedding service was duly said, and the benediction duly pronounced. 'Now,' thought the cunning bridegroom, 'now's my time;' and was about to pull out his little bottle of magic water and drink it there and then; but being a man of some religious feeling, he thought it would be hardly decent to be seen drinking out of a bottle in church; and besides this, the friends present might think that his heart had at last failed him at the thought of the magnitude of the deed he had just committed, and that he had to fortify himself with a little 'Dutch courage;' and therefore he very properly waited till the wedding party reached the vestry, when he instantly swallowed the contents of his flask, and triumphantly exhibiting the upturned bottle to his loving bride, exclaimed with a broad grin: 'First drink, lass, first drink; now I be maister!' But what was the surprise of himself and the assembled company at seeing the fair bride quietly and demurely produce from the bosom of her dress a little bottle, with a long straw inserted through the cork, which she immediately inverted, to show that the bottle was perfectly empty, and said, with a knowing, self-satisfied smile: 'Nay, nay, Robin; first drink, first drink. It's I be maister, not thee!'

The king's well-known exclamation to Hamlet—

But see, amazement on thy mother sits,

would well have applied to the whole company assembled in the vestry at that moment. If the bride had really emptied her bottle, how and when did she do it? for nobody saw her, or had the smallest conception of her movements. Every one seemed to look for an explanation; and after a few moments of awkward silence, the bride, evidently not a little pleased with her own ready wit, proceeded to inform the company that, taking advantage of the huge poke-bonnets and full veils worn at that day, she, whilst kneeling at the end of the service, with her head bowed forward, contrived, by the help of the long straw, to drink the contents of the bottle without removing it from its hiding-place in the bosom of her dress,

or attracting the smallest notice from any one. This feat she had managed to accomplish immediately on the close of the benediction; thereby getting first drink after the marriage service had been actually finished; and thus securing—according to this most fanciful legend—that position of authority so eagerly sought for by the ladies when they have entered on the married estate.

CHRISTINE.

I SLEPT:

Long ere the sun had dropped into the West,
Long ere the birds proposed their evening rest;
Still glowed the sun in its uncoloured fire,
Still quivered heaven with the lark's desire:

And while I slept I woke
As in a conscious dream;
Methought I heard the stroke
Of rowing on the stream,

Whereon I lay rocked in an osier bed,
Kissed by the winds, on summer fragrance fed.
One only rower came,
Guiding a winged barge;

How noble was his frame,
His earnest eyes how large!

He gently steered his barge to where I lay;
He fondly touched my lips, and looked away
On the fast-dying day,
And wept.

His flowing hair, of deeply-clustering gold,
Was wet with evening dew; his brow was old
With eager thought; his eyes were globes of light,
That pierced with joy the universal night.

He lowly bent and spake
Soft whispers in my ear:
Strange that his breath should wake
A sense of longing fear!

'I love thee; wake; embrace me, fair Christine.'

I came from far to know, to woo, to win.

I love thee; wake; arise
From out thy golden sleep;
I will anoint thine eyes

With salve; but cease thy sleep.

He kissed my heavy eyes and wooed me till the sun
Rolled to the sea; till love's fond sand had run.

He turned him to the sea:

'Farewell, Christine, to thee.'

I woke

With his last word,
And cried through tears and with uplifted hands:
'Come back, beloved; why to distant lands
Row thy lone way? Oh! come and breathe again
Thy perfumed words, spoke this time not in vain.'

'Come back!' but the wide vales

Return my yearning cry:

'Come back!' but far he sails;

He heeds not my sad cry.

'Oh! come again, great stranger; why depart?
Come back to heal my pierced, anguished heart.'

I saw his airy skiff

Sail up beyond the sea,

Far o'er a cloudy cliff

That overhung the sea.

And never may return the rapture of my dream?

And never may I hear or know of him?

'Come, oh! come to me.—

Oh! hush, envenomed sea.'

'Farewell, Christine, to thee.'

Would God I had awoke

Before my heart was broke.

CASTLE GARDEN.

ONE of the most memorable objects that arrest the attention of the European wanderer landing at New York, is the famous *dépôt* at Castle Garden. To this all emigrants must go, unless they are cabin passengers. Some do not like it, and complain that a republican government should imitate the bureaucratic inquisitiveness of the Old World. English people, whose pride is great though their fortunes are small, are often indignant at being placed in a semi-pauper category, upon reaching the land of freedom and equality. At first sight, it does look as though rich and poor were treated with painful distinctness; for cabin passengers are landed at the wharf of the Company's steamers, stewards and porters busily aiding the transport of their baggage; and officers bid them farewell with lifted caps and courteous phrases. Only when the last of these preferential persons has departed, does the steamer turn her head to the *dépôt* where steerage passengers debark. There, like a herd, are they deposited upon the shore of the promised land, not free to go where they list, but detained to answer the queries of the Emigration Commissioners, and to be advised and directed by the officials of the bureau. No wonder many are impatient of the formalities of Castle Garden; but few complain when they come to know how much the institution is of advantage to the new-comer, and how indispensable it is to his welfare.

Castle Garden *dépôt* was established in 1858, when government Commissioners were appointed to take surveillance of those landing at New York. The portentous influx of Irish people which followed the famine years of 1847-8 compelled attention. Thousands of poor ignorant creatures were shot like rubbish upon the quays of New York, to live, to die, to succeed, or to perish. The arrival of so much misery and helplessness was not reassuring to the Americans. Rude, semi-savage, hunger-bitten hordes did not promise increase of material and intellectual wealth for the United States; on the contrary, threatened

to deteriorate its society. So, nothing was done to make the situation pleasurable, in order that the inflow of ignorant poverty might be checked. The consequence was that the degeneracy, which famine created in Ireland, was intensified by the sufferings endured in New York and its neighbourhood. Desperadoes of both sexes were engendered by the squalor, vice, and helplessness abounding. Thousands who might have risen in the scale of being in the Western wilds, sank into the condition of brute beasts in the slums of the city. They preyed upon those coming from Ireland and other European countries; and after despoiling them of their all, reduced some to desperadoes like themselves, and others to maddening poverty. In this way, a criminal class of a most alarming kind was created and fostered; a class which pillaged and demoralised at will.

At the same time, the conduct of those engaged in transporting emigrants from Europe to the United States was anything but humane, and often highly culpable. Ship-owners were eager to make the utmost out of the poor beings in the steerage; officers and sailors were often debased and heartless ruffians who victimised those at their mercy. Emigrant ships were at the pleasure of the winds; for steam was only applied to mail-packets. Often the voyage occupied a month. Sanitary and moral concerns were little considered; and the physical and ethical natures of those driven by stress of circumstances from their fatherland were not a little injured by their Atlantic experiences. Immorality and disease frequently consummated the ruin began by misfortune at home. Thus it followed that the new blood pouring into America was in constant process of pollution; and a race of evil-doers was being manufactured that boded ill for present and future generations.

The tone of the lower orders of New York was profoundly affected by the demoralisation that went on for years. Nowhere in the world are there more dangerous ruffians than those now haunting the 'shady' quarters of that city. They

are capable of any crime within the scope of trained wickedness; and their invention and audacity place them in the front rank of the malefactors of the age. Beside the ruffianly marauders, there are still more baleful enemies of society, who attack it through every avenue of trade and commerce. These people employ all the resources of civilisation to destroy civilisation. Sharpened by their age and surroundings to a point of acuteness that Europe knows not—educated, refined, and lustful of costly pleasures, they carry on a war with the law-abiding that knows no truce, that is softened by no consideration for sex or suffering. In short, the predatory spirit invades the domain of administration to an extent that has made New York a by-word in the Old World and the New.

Of course it would be absurd to attribute all the moral delinquencies of New York to the deceptions and plunderings inflicted upon emigrants thirty years ago. America had scoundrels high and low long before the period referred to; but the iniquities perpetrated during the decade of 1848–58 did infinite mischief. No doubt, too, many emigrants were prone to evil in their fatherland; and some were self-deported criminals; but, withal, evil can be developed, and was developed, until the Emigration Commissioners began their noble work at Castle Garden.

In 1858, the American government recognised the important truth that it stood *in loco parentis* to the alien children swelling its family. Unless they were set to useful and reproductive employments, they would devour society parasitically. In these endless multitudes coming from the East, lay an incalculable potentiality of wealth, if energies were rightly directed. If not, the immigrants were practically an army of invaders, capable of untold misdoing. Westward lay unpeopled lands; on the quays and streets of New York, the people; join them together, and the United States would become a splendid phenomenon among the nations of the earth. And so it came about that the bureau termed Castle Garden was established to protect immigrants from sharpers in New York and along the route they proposed to travel after leaving that city. They were furnished with reliable information as to means of transport, and the probabilities of employment in every state of the Union. Officials speaking every language and dialect of Europe were upon the staff of the Commissioners, in order that all strangers might be definitely instructed in the matters it behoved them to know. Facilities were given to employers for communicating with the immigrants, by which large numbers found occupation a few hours after landing. Particular care was taken of young and unprotected females. In short, all that officialism could do for poor strangers seeking a home in a distant foreign land was done. By degrees, the great services of the bureau came to be amply recognised throughout the United

States; and much of the prosperity, thrift, and moral advance of later years is distinctly traceable to the good work done at Castle Garden.

Necessarily, a large and increasing revenue was required for this labour of economical philanthropy. It was raised by charging the Companies one dollar per head upon the emigrants landed by the various ships and steamers. Many protests were made by the Companies against what they deemed an unwarrantable tax; but for years the protests were unheeded. Nor was that the only grievance the ship-owners complained of. In England, the government had made immense demands on behalf of the emigrants quitting its shores. The ill-treatment, the frauds, the crimes inflicted upon steerage passengers, had roused parliament to come to their protection, and the Board of Trade took a rigorous oversight of the traffic. Although much remains to be done, the voyage of to-day is a pleasure-trip compared with the horrors of past days. The food supplied is abundant, and fairly well cooked; and though multitudes are confined in a small space, the steerage is infinitely more comfortable than it was fifty years ago. Now-a-days too, the voyage is reduced to a maximum of ten days, with swifter passages of eight days and even fewer.

The action of the British and American governments on behalf of emigrants has been to the advantage of ship-owners. By compelling them to treat their passengers well, and to save them from the harpies of New York, the trade has attained its present astounding proportions. An Atlantic voyage was formerly a frightful ordeal; it is now a pleasant holiday trip; and thousands of steerage passengers come from New York to Europe, where only dozens came in former times. The immense fleets employed in the trade, and the handsome incomes they earn, prove how remunerative the passenger traffic has become.

The capitation charge upon emigrants has been reduced by the authorities to fifty cents; for at length the supreme legislature of the United States admitted that the charge imposed at Castle Garden was illegal. After much disputation as to how the expense of the bureau was to be maintained, it seemed probable that it would be closed. In fact, the Emigration Commissioners had announced that Castle Garden would receive no more emigrants, and that each steam Company must discharge their steerage passengers upon their own wharfs. The cablegram reporting this produced something like consternation in England; and loud demands were made by the newspapers that some arrangements should be come to, to save a repetition of the scenes of the previous generation.

By an extension and amendment of the United States Immigration Act, which came into force on the 1st of November, the government has taken control of all its intending citizens from the port of embarkation. Each steerage passenger must have a cubical space of one hundred feet allotted to him or her between decks on steamers; and one hundred and ten cubic feet on sailing-vessels. The roof of the deck must be six feet from the floor. A fine of fifty dollars will be imposed for any breach of these regulations; and

besides, the captain may be imprisoned for six months.

Each berth must be two feet wide and six feet long, and also divided from other berths. Two relatives or friends may occupy berths without divisions; but strangers must be kept apart. This space is greater than that hitherto allowed by many European Companies, and will prevent the overcrowding which has been so loudly complained of.

There must be two ventilators for each fifty passengers, one introducing fresh, and the other removing the vitiated air from the berths. Three meals of good food must be supplied each day; and each passenger allowed four quarts of water.

The ship's company are forbidden to enter the emigrants' quarters under the penalty of one hundred dollars. Copies of this regulation are to be hung up in the steerage in the principal languages of Europe.

No 'runners' are permitted to board the vessel on arrival.

The fifty cents duty levied upon immigrants is to defray the cost of regulating the traffic, for caring for the new-comers, for relieving the distressed among them, and for the general purposes of the Act.

The collectors of customs are charged with its administration; and these will doubtless do their duty.

Many scenes has the quaintly-ugly building on the Castle Garden witnessed before it became an immigrants' dépôt. In it Lafayette was welcomed on his return to America in 1824 by the notables of the city. It was afterwards converted into a concert-hall, where Jenny Lind enchanted New-Yorkers with her nightingale notes. Upon its stage, too, Grisi, Mario, and other operatic grandees, played and sang. Its rumbling recesses have quaked at the thunder of Jullien's *monstre* orchestra. But none of its bygone scenes were so thrilling as many of those daily occurring now. The realities of life are far more wonderful than the most finished imaginings of romancers; and the visitor to Castle Garden can in an hour have any amount of proof.

Let us try to depict a few of the tableaux that now present themselves.

In a corner is seen a group that looks like the remnant of an operatic chorus, that has phantasmally returned to the abandoned theatre. Women with bright blue bodices and gleaming white linen, whose headgear blazes like a red fire, are speaking in hurried recitative to a knot of men, in long gray cloaks, slouched hats, and bandage-wrapped legs rising from sandalled feet. Their hair is long, moustaches carelessly curled, eyes glittering darkly, cheeks sallow and dirty. From time to time, one of the men bursts into the recitative with torrential speech, waving his cloak like a Roman senator, shrugging his pliant body with the most extravagant vermicular contortions. Then all join in a cadenced *finale*, gesticulate grandly, and at length subside into expectancy and silence. These people are lazzaroni from Naples, seeking in the New World something better than the hereditary beggarmdom of the Old. Soon a Castle Garden official comes up to them, and explains in their own *patois* what they must do and how they

must do. Railway tickets are given them; and they move off rejoicing, emitting a whirlwind of dulcet vowels.

As they pass from view, a strange little party of sandy-bearded, tangle-haired men, incredibly costumed and marvellously unclean, appear. With them are women, beautiful, dragged and unkempt though they be; and children looking like large-eyed cherubim, taken from an old Polish picture-gallery. They are all profoundly subdued; their eyes meet one wistfully, deprecatingly. Their speech is brief and low-spoken, in what tongue few can tell. It sounds strange to an English ear. These poor souls seem like human fossils drawn from the depths of Time, strangely incongruous in the bustling, alert, unheeding world of Castle Garden. While multitudes around them are waiting impatiently to get *en route*, they are meekly passive, contentedly ignored. Hundreds go, still they remain unperturbed. But their turn comes. A man approaches, speaks to the eldest of the group, who begins, in a humble, deprecating way, to tell his story. These people are Russian Jews, who have endured much, before persecution and despoilment forced them to fly for their lives. Hated, contemned, mocked, they have travelled the best part of half the world's diameter to this American land, seeking an abiding-place, and permission to labour and to live. They have not come with a company of their fellows, but are an isolated party, paying their own charges. By-and-by, they disappear with a guide.

Among a noisy crowd of poor Irish, is a family of six that arrest attention from their silence and appearance. Though of the same nationality as those about them, they keep apart. A patriarch of fourscore is seated upon a box. His face is wan and weary, and it hurts one like a wound to note its expression. It tells of a man torn up from the foundations of a life grown rigid, and hurled, as by an earthquake, from the ancestral hearth into the mad clangour of intolerable scenes. He has evidently suffered much on board ship; but mental anguish and a yearning for repose afflict him more than physical pain. Beside him is a woman of middle age, evidently his daughter, for her features are his own. She is well dressed and even lady-like. Anxiety is in her restless eye, her quivering lip, and her unconscious stare. She hears not the chatter going on around; her thoughts are far away. A strong, stern-looking young man stands near her, taking notes of the scene with impatient disdain. He is the eldest son of the widowed mother, the prop and pioneer of his family, ruined by agrarian anarchy. Two young girls, his sisters, and a little boy of ten or eleven, are behind him, jaded with waiting, and too sorrowful to speak. The old man was a small Squire in the south of Ireland; he has been between the hammer and the anvil; for his sympathies have been with the poor, but as a landlord he has had to defend himself against the foes of property. His daughter's husband has been killed; and with a few score pounds, the family has fled to find a temporary home in America, until better times return.

In a quiet corner, a gentle, rosy matron is talking to a young Swedish peasant girl in her own language, and offering her good terms as a domestic servant. Not far away from them is

a bustling, loud-spoken, dogmatical lady, grandly attired. She is engaging a poorly clad Irish girl to serve in her mansion near Central Park. A few years ago, this fine lady herself sat in Castle Garden waiting to be hired. She was poorer than the girl beside her. She has lived a romance since then. In the ship which brought her from Ireland was a groom, who made her acquaintance. He had a talent for betting, and New York furnished a field equal to his genius. He rose high and quickly; and after a time, gave up horses for stocks and shares, and became one of the great operators of the New York Exchange. His wife, this magnificently appointed lady, rose with him, and is now one of the 'powers' of the city. Who can say what the destiny of the girl she is hiring may be, when she is launched into the eventful life of the New World? She may marry a Silver King, a railway Colossus, a territorial Goliath, a dictator of the Corn or Cattle worlds; and as the wife of a powerful statesman, may mingle with the potentates of the Old World. She may become the mother of a President, whose fame shall thunder through history. Who can say what potentialities of intellectual and material command lie enwrapped in this poor girl, accepting service at fifteen dollars per month?

Castle Garden has been an enchanted vestibule to myriads, who have reached it in poverty, sorrow, and doubt, but who have thence started upon a path that led to wealth and power infinitely beyond their dreams. Indeed, it is chiefly those starting from the immigrants' depôt that attain the grandest successes the country affords. Those who reach America in a luxurious cabin berth, and who step ashore in a gentlemanly way at the private wharf of the steam-ship owner, do not often make a permanently brilliant figure in society. The voyage to them has been a floating picnic; exquisite food, exhilarating drinks, jovial companionship, have made the whimsical, testy Atlantic not only endurable, but enjoyable. Pampered and self-satisfied, the fortune-seeker greets his adopted land, assured that such a thoroughly deserving fellow has only to ask in order to have. Luck may be his, but also bad luck. In a few months, our deserving sybarite may be working in a composite gang of negroes, Dutchmen, Irish peasants, and whisky-made madmen, upon the track of a far-West railway.

The stern discipline of the steerage, the *entrée* furnished by Castle Garden, the iron compulsions of poverty, are real preparatives for fortune in a country where work is all in all. Alas! for the man who is superfine and disdainful of small beginnings; Castle Garden promises little delight to him. To the willing and the cheerful, and particularly to the adaptive, it opens out a prospect more promising, perhaps, than any other point of debarkation in the world. As systematic settlement progresses in America, the advantages of the bureau are enlarged; and a time may come when all who are received at Castle Garden will find situations through its instrumentality. As it is, the hazards and anxieties of emigration have been immensely reduced since the Commissioners began their humane work; and the extraordinary exodus from Europe which has marked the past two years, is in no small degree owing to the

part that Castle Garden has played in the protection and economical distribution of the millions that have been cared for during the past twenty-five years of its existence.

VALENTINE STRANGE.

A STORY OF THE PRIMROSE WAY.

CHAPTER XLIX.—VAL STRANGE MEETS HIS OLD FRIEND AND ENEMY AT TIMES, AND AFTER ALL THERE IS ON EACH SIDE A SOFTENED AND TENDER ESTEEM.

You remember in the famous wooing of Duncan Gray, the sly Scottish brevity of humour with which the narrator sets forth the final causes which brought the young people together. Gerard, like Duncan, was 'a lad o' grace'; but Milly's case was by no means piteous to look at. She seemed, on the contrary, to be very fairly happy; she was always good-tempered and cheerful; she made the old house bright with a sweet equable brightness. Gerard began to bethink himself—What would it look like if she left it? His mother's revelation hung in his mind a good deal; he admitted that Milly would make an ideal wife for any man happy enough to win her. Yet there was no room in his heart for any new love. He watched her as she tended his father, and warmed the old man's last dim years with a gentle and untiring love, like that of a good daughter. He watched her as she cheered his mother, and saw in her the only sunshine the sombre house held within it in these dull gray days. He thought highly of her, and regarded her with what he felt as a deep brotherly affection, but no more.

Whilst things were at this pass, the new owner of the Grange, a handsome young bachelor, well provided with the good things of life, began to make advances, and was remarkably well received by Mrs Lumby. Gerard's mother was one of those curiously unselfish women who find delight in others' happiness, and make no schemes for their own, and who are generally very happy in despite of fortune, perhaps because of their own unselfishness. Gerard had liked the new neighbour well enough, to begin with; and though he was slower to make friendships now than he had ever been, he manifested an unusual liking for Mr Graham's society. But somehow—construe me this who will—he began suddenly to discern some wretched affectations in the man's manner; his whiskers offended him for one thing, and he hated to see a man part his hair in the middle and wear an eyeglass. Curiously enough, the birth of these small mislikings was contemporaneous with a seeming of desire on Mr Graham's part to be a good deal at Lumby Hall and to inveigle Milly into private talk, and to waylay her in a chance manner in her drives, walks, and visits. A little coolness sprang up between Gerard and the new acquaintance, and once or twice Gerard greeted the casual mention of his name with chill ridicule of his smile, which was perhaps a little too frequent, or of his eyeglass, which was somewhat too transparently in the young gentleman's way. Mrs Lumby having favoured his visits, and clearly discerned their object, was a little piqued.

'Gerard,' she said privately to him, 'you do injustice to Mr Graham. No man is altogether free of peculiarities; but he is a gentleman; he is very good to the poor; and his character is unimpeachable.'

The young fellow growled a little, admitting that all this might be true, but demanding to know what the gentleman in question saw to smirk at all day long. 'Lemonade is a very good drink in its way, no doubt,' he said with a reluctant laugh, 'but you don't always want it. What is the fellow always here for? One gets tired of him.'

'He is paying his addresses to Milly,' said the excellent woman with some warmth. 'And you must not play the part of the dog in the manger, Gerard.'

'What?' said he, with more briskness than was common with him. 'Is she going to marry that fellow?' He walked on a step or two, with a stronger feeling of dislike than ever for Mr Graham.

'I can't say how far the matter has gone,' said Mrs Lumby in answer. 'But his intentions are evident, and I hope Milly will accept him. It is high time she was settled.'

Gerard took this intimation with a worse grace than might have been expected of him. He would at least have liked, he said, to see her married to a worthy man.

'Is there anybody worthier in the field?' demanded his mother.

To that query Milly's well-wisher returned no answer.

A day came when the contemned Graham came with his smile, and after an interview with Milly, went away without it. He stayed away for a month or two; and Gerard missed him so far that at last he sent him a note asking him to join in a day's shooting. The old coldness died, and the two, without developing an heroic friendship, got on very well as neighbours, and were pleasant acquaintances.

'You get on very well with Mr Graham now, Gerard,' said his mother, with an unkind emphasis on the 'now.'

'I like him better than I did,' said the young man with perfect calm. He was by this time a Justice of the Peace, noticeable for a remarkable judicial patience in his conduct of all cases which came before him. Amongst his compeers was one Staines, a middle-aged man, a widower, and a large landowner. This was the one man whom Gerard really esteemed out of all the unpaid justices of the county, and he spoke of him with reserved warmth at home, and finally brought him to Lumby Hall pretty often. But Mr Staines began to come of his own initiative. There was very little glass in the gardens of the Hall, and his conservatories were the finest in the whole country-side. He used to send melons, pines, grapes, and what not; and as for flowers, they began to bloom all the year round. The ill-regulated Gerard began to cool towards the admirable Staines, and Mrs Lumby lost patience with him.

'Why have you quarrelled with Mr Staines?' she asked.

'We haven't quarrelled,' said Gerard quietly.

'You are not nearly so friendly as you were,' persisted his mother; and then broke out: 'You

are a dog in the manger, Gerard. You will neither marry Milly yourself nor let any one else marry her.'

'I don't want her to marry Staines, certainly,' he said with provoking calmness. 'She mustn't be a nurse all her life. The man's five-and-forty, and has three children.'

His mother sighed, and was fast giving him up as intractable. If Milly had only shown some favour to any one of her wooers, she would have had more hope. That might stir him into action, she thought; and she even manoeuvred to make it appear that the girl had a penchant for the widower; but without effect. All these things took time, of course; and indeed four years had gone by since Val Strange had betrayed his friend. Many things which had at that time seemed impossible, had come about. Gerard had forgiven his enemy. He had done more—he had saved the enemy's life, in place of taking it. He had himself, after an awful repentance, settled down into peace of heart, or something very near it. And all this time the thought had been in his mind—vaguely at first, but clearer and more clear as time went on—that the best woman he had ever known in his life loved him, and was to be had almost for the asking.

Messrs Graham and Staines had done something between them to open his eyes to his own condition. But it was natural that in a heart so loyal, there should be much tenderness about disturbing the place of the dead. Consciously to admit a new love, had something of an air of sacrilege about it; and on the other hand there was a baseness of coxcombry about the idea of marrying Milly out of pity for her attachment—as if she could not live without him. And indeed Milly seemed happy and contented amidst the multifarious duties she laid upon herself, and looked by no means like the love-lorn maiden of the lending library. But as widower Staines grew more and more persevering in his presentations of fruit and flowers, and more exigent in his attendance at the Hall, Gerard at last became alive to the fact, that however Romance might reject the notion, he still had within him capacities for loving a second time. There were none of the old wild transports of passion in this calm affection; but it was none the less a marriageable love, and he saw it. I am not altogether sure that the volcanic nature of his first love had not imbued him with ideas about love and marriage in general which were hard to shake, and that finding none of the volcanic agencies at work, he declined to believe in the dictates of his own heart. But at last the Staines' affair came to a head, and the middle-aged Justice came up with a nervous smile and went away without it. And then Gerard spoke.

Milly asked for time to think, and consulted his mother. 'I am not going to be married out of pity,' she said with spirit in the course of the colloquy; and then with sudden tenderness, threw herself upon Mrs Lumby's bosom a gentle avalanche, and asked—Could she make him happy? The mother was sure of it, had seen it for a long time. 'Speak to him of it,' murmured Milly; 'and tell me what he says, and how he says it.'

Mrs Lumby promised, and kept her promise. 'I have been blind,' said Gerard. 'I have loved her these two years past.'

That settled the matter; and the news of the result of the conference between mother and son being conveyed to Milly, she consented. They were married, and they live in a calm blessedness and confidence in each other, enduring crosses and griefs and trials like other people. A year ago, Gerard's father died, peacefully and happily, having lived to dandle an heir-male upon his knees, and to see a promise that the old house would be kept alive. The great firm prospers, and is higher in the world than ever; and Barnes still sits in the seat of Garling. Val Strange meets his old friend and enemy at times, and after all there is on each side a softened and tender esteem. The two know each other's temptations, and that is a great matter. Where storm raged, calm reigns.

I have told my tale ill indeed if it needs that I should point my moral here. The shadows I have lived with for a year grow pale and fade. The tale is told, and yet the hand is half reluctant to lay down the pen. Some day—who knows how soon?—an inexorable hand will write down *Finis* to your life's history and mine. The tale which goes before that awful word will tell of many wanderings in the dubious Primrose Way. Let us resolve in parting that it shall tell also of an honest effort to follow Duty, though she tread the rougher path on which it seems God's ordinance that she shall most often travel. We can scarce do ill, if we part with one another on those terms. And so—Farewell.

OUR MILK-SUPPLIES.

AMONGST other things in this country which have been affected by American competition, is the making of cheese and butter; and some who are disposed to grumble would allege that our rivals on the other side of the Atlantic have so cut in upon home production, as to make it little better than a losing business. In spite, however, of such an allegation, we find a steady increase in the production and consumption of home-dairy produce during recent years. Pure and good milk is one of the first necessities of every household, and how to secure the purity and richness of our milk-supply is one of the dietetic problems of modern life. The British dairy-farmer, therefore, if he knows his business, has little to fear in the trade of milk-selling and butter-making.

The agricultural returns of Great Britain for last year show an increase upon the previous year of twenty-nine thousand cows and milk-heifers. A long row of figures is required to represent the probable quantity of milk annually produced in the United Kingdom; it has been estimated at sixteen hundred and twenty-eight million gallons.

In spite of our apparently abundant home supply of dairy produce we imported butter in 1881 to the value of about eleven million pounds sterling. The largest supply—745,536 cwt.—came from Holland; France sent us 496,724 cwt.; Denmark, 279,625 cwt.; and the United States, 174,246 cwt. In the matter of cheese, the United States in the same year sent us by far the largest proportion of our total imports, or 1,244,419 cwt.; the total from all countries being 1,840,090 cwt. This immense importation of cheese from America may

be partially explained by the abundant pasturage, and the factory system of cheese-making, which has been carried on for many years. American cheese is usually made in large quantities. The farmer sends his milk to the cheese-factory, which draws its supply from the surrounding district, and which is usually large enough to receive the milk of about two thousand cows daily. The farmer is either paid for the quantity of milk which he brings, or from the general results. This system—apparently introduced from Switzerland about 1851—has spread very rapidly, so that there are now over three thousand such factories in the United States. This system was adopted in Derby in 1869, and in Stafford in 1877, on a small scale.

We have now many Dairy-supply Companies and butter-factories in England, where the cream can be separated from the morning's milk, made into butter by mid-day, and be on sale in London in the evening. Such a factory—erected at a cost of about eight hundred pounds—will consume about one thousand gallons of milk daily, and is the best defence the British farmer can make against foreign competition. Our present railway system has so revolutionised the milk-supply of our large towns as to make it possible to gather in quantities of milk from a wide district. This is an advantage, as the milk from our town dairies, where the cows get no open-air feeding, can scarcely be so wholesome as the country supply.

In addition to our supply of fresh milk, condensed milk is also largely used and manufactured. The export of this substance from Switzerland is very great, the largest proportion coming to this country. This substance is milk from which the watery particles have been artificially driven off until of the required consistence, when sugar is added, to prevent decomposition. Thus manufactured, condensed milk contains about fifty per cent. of sugar, an obvious objection to its extended use with many people. Still, where fresh cows' milk cannot be had, it is the best substitute for it, as it contains all the nutritive qualities of the milk with less water in solution. We find that even such a flourishing agricultural colony as New Zealand imported in 1880 six thousand nine hundred and forty-three packages of preserved milk, valued at ten thousand one hundred and forty-nine pounds. Pure condensed milk, which only requires the addition of water for its use, may also be had; but it must be quickly used, as decomposition rapidly sets in after the tin is opened.

We are all more or less startled when we hear that a fever epidemic has been traced to the use of tainted milk; and this taint, again, may have been traced to impure water, of which the cows may have been drinking. Fifteen cases of typhoid fever due to infected milk, occurred in twelve houses in Clapham recently; and other cases will have come within the experience of every reader. An Order of the Privy Council, called the Dairies, Cowsheds, and Milkshops Order, has been binding since the middle of 1879 on cow-keepers and dairy-men in England and Wales, in regard to the proper sanitation of dairies and the contamination of milk. By its provisions, the mixing of the milk from a diseased cow with the other milk for sale is distinctly forbidden. It must

not be used even to feed swine until it has been boiled. The best Dairy-supply Companies are generally ready to give a guarantee as to the purity and quality of the milk sold, an analysis of the milk being made from time to time.

We have only to glance at an illustrated catalogue of Dairy Implements and Utensils, or visit an Agricultural Show, to remark the great progress made in scientific dairy-farming in recent years. Prominent among these changes is the separation of cream from milk by a 'separator,' and the making of butter by machinery driven by a steam or gas engine. There are several milk 'separators' in use, the principle of centrifugal action being the same in each. Visitors to any of our large Agricultural Shows will be familiar with the action of this machine. The milk being fed into a vessel which revolves at a high rate of speed, soon separates the cream from the milk. The particles in the vessel arrange themselves according to their specific gravities; the milk being the heavier, comes to the outside, and the cream remains inside. Looking at the revolving cylinder, the milk and cream are seen standing up in two distinct white walls round the vessel, while two brass syphons run them off as collected. By means of this machine, the cream can be separated from the morning's milk, and churned into butter by mid-day. The butter, skim-milk, and butter-milk yielded by this process are perfectly fresh and of first-rate quality. The milk has also been freed from many impurities in the process. Delay is also avoided when a 'separator' is in use, and the butter is sweeter. The use of butter-workers—which may be had of all shapes and sizes—also saves all contact with the hand. Besides the Laval, there are the Peterson and the Lefeldt Separators. The last two are German inventions; but the Lefeldt is scarcely so portable and convenient as the Laval, which was awarded the gold medal at the last Royal Agricultural Show. What is called a Danish Separator—numbers of which are in constant use in Denmark and at the Kiel butter factories—has been found very useful and effective, doing the work with a less number of revolutions than the Laval.

In this connection, it is interesting to note the results of the experiments made in 1879-81 by M. Fjord, a Swedish chemist, as to the relative value of the different methods of separating the cream from the milk, and the making of butter from equal quantities of milk. The systems tried were—by the Lefeldt Centrifugal Separator; a Danish Separator, on the same principle as the Lefeldt; the Swartz system of deep cans set in ice—so named after Swartz, a Swedish landowner, the inventor; and the shallow-pan system. The milk from a dairy of two hundred cows, yielding six hundred pounds, was equally divided among the three processes, for the purpose of the experiment, which was carefully conducted for a year. The result showed a balance in favour of the centrifugal system of 8·12 per cent. more butter, from the same quantity of milk set in ice on the Swartz system, and 10·70 per cent. more than the shallow-pan system. Only in the month of August was the ice-and-deep-setting-pan system superior to the centrifugal.

Since Dr Carrick showed the wonderful properties of koumiss or fermented mares' milk in

cases of pulmonary consumption or other wasting diseases, as used in the Tartar Steppes, attention has been drawn to its use and manufacture. It has been found that koumiss of a useful and valuable kind can be had from cows' milk. Most of the Dairy-supply Companies have arranged for its manufacture. For those who desire a recipe for making koumiss, we quote the following, from the *Chemist and Druggist*: Take half an ounce of grape-sugar, and dissolve it in four ounces of water; in about two ounces of milk dissolve twenty grains of Fleischman's compound yeast (or of well-washed brewers' yeast). Mix the two in a quart champagne bottle, which should then be filled with good cows' milk to within a couple of inches of the top; cork well, securing the cork with wire or a string, and place in an ice-chest or cellar at a temperature of about fifty degrees Fahrenheit, or lower, and agitate three times a day. In three or four days, the koumiss is ready for use, and should not be kept longer than four or five days. It should be drawn so as to retain the carbonic acid gas. It is rich and creamy in appearance, is slightly acidulated, and well adapted for the purposes for which it is intended. Koumiss of a simple kind may be made by simply allowing sweet milk to stand in well-corked bottles in a cool place, away from the light, and well shaken every day, for a week in summer, or a fortnight in winter. Care should be taken when shaking it that the bottle does not burst. The lactic acid thus generated renders the prepared milk or koumiss easy of digestion.

Many Companies have been formed in recent years for the supply of milk, butter, and other dairy produce, and amongst the larger Dairy-supply Associations is the Aylesbury Dairy Company (St Petersburg Place, Bayswater, London, W.), which is well equipped with every modern appliance. How large the business is, may be guessed, when we find fifty thousand pounds paid in one year for milk and cream; and how profitable, when we find a dividend of from eight to twelve per cent. paid to shareholders. The Company boasts that it has between three or four hundred medical men of the highest eminence as customers. The quantity of milk sold in 1877 was three hundred and forty-seven thousand gallons; it had risen in 1881 to seven hundred and eighty-nine thousand six hundred and forty-seven gallons. Milk separators, and all the newest and most improved machinery, are in constant use by this Company. Whether as a result of the rise of these Dairy Companies in London, or not, the consumption of milk in the Metropolis has enormously increased.

Another very perfectly equipped dairy establishment is that of Messrs Welford & Sons, who have erected a model structure at St Peter's Park, Harrow Road, London; with branches at South Kensington, Queen's Road, Bayswater, and Maida Vale, all supplied from their Warwick Farm Dairies, Willesden. They were appointed Dairy-men to the Queen in 1876. Another Metropolitan Dairy Company has started a farm near Guildford.

Two of the best known provincial English factories are the Aldford cheese factory, belonging to the Duke of Westminster, and that of Lord Vernon at Sudbury, Derbyshire, the chief product of which is butter. At the latter there are two

Danish separators at work, a steam-churn, and butter-workers. The milk is gathered in from the farmers as in the American system, and both Lord Vernon and those who share in this co-operative system, seem satisfied with the result. The skim-milk is used to feed pigs. The saving of labour by this butter and cheese factory is very great, while all the products are sweeter and better than by the old system of setting the milk in cans until the cream rises.

Another experiment after the method of the American factory system, for the manufacture of cheese and butter and the sale of milk, skimmed and fresh, was begun at Low Row, Cumberland, in the spring of last year by Mr Thomas Carrick. The ventilation of the buildings erected by him is of the most perfect description, absolute cleanliness being maintained, while there is an abundant supply of fresh spring-water at hand. To start with, a contract was made with about forty farmers for the supply of pure and fresh milk. Each farmer was provided with a Lawrence's Refrigerator, to cool the milk to a temperature of not less than sixty degrees Fahrenheit, before despatching it in the large steel churns employed for this purpose. The milk is either creamed by means of the Laval Separator, or set in deep pans on the Swartz system. The churning is performed by steam; and the after-processes are also performed by machinery, which prevents all contact by hand. About five hundred pounds of butter were made daily at first. The fresh skimmed milk—of which there are about one thousand to fifteen hundred gallons daily—is sent for sale to the northern towns, where its excellence and utility as an article of consumption are gradually becoming known.

Not content with sending to us such a large portion of cheese and butter, many manufacturers in the United States have gone into the *artificial* cheese and butter line. We are inundated with 'butterine' and artificial Cheddar and Stilton, the latter kinds sold in all probability at twenty or thirty per cent. above their fair value. Dr Voelcker, on behalf of the Royal Agricultural Society, made an analysis of some of this imitation cheese, and found it quite wholesome. Yet these imitations should be sold as such; and the Council of the Royal Agricultural Society have wisely recommended 'that the Board of Trade be urged to take steps to insure that these descriptions of so-called cheese be sold under their proper designation.'

The manufacture of oleomargarine was discussed in a paper presented to both Houses of Parliament in 1881; and allusion was made to it again this year in a question to the President of the Board of Trade. In the year ending June 30, 1880, the export of oleomargarine from New York was about nineteen million pounds, the largest part of it going to Holland. The present exports are estimated at from twenty-five to thirty million per annum. This substance is made from beef-suet, disintegrated in warm water, passed through a fine sieve, melted at one hundred and twenty degrees Fahrenheit, and afterwards solidified. It is refined by subjecting it to pressure at ninety degrees Fahrenheit. When 'butterine' is the object of manufacture, the oil is mixed with ten per cent. of milk, then churned, coloured with annatto, rolled in ice, and afterwards salted.

When analysed, it is found to differ from ordinary butter only in that it contains less of soluble fats. American Cheddar is made of oil, lard, or this oleomargarine and skim-milk. The imitation is so perfect, that competent judges can scarcely determine which is the real and which the imitation cheese.

The practice of dairy-farming differs in various counties, according to the nature of the pasturage, the processes of manufacture, and the condition upon which the farms are let. The quantity and richness of the milk are also dependent on many conditions, such as, the times for milking, the kind of feeding, and the breed of cattle. It is self-evident, however, that where there is a great demand for dairy produce, scientific as distinguished from ignorant and slovenly dairy-farming is the most profitable to the farmer himself, as well as the most advantageous to the consumer.

CONJURING CONTRETEMPS.

BY AN AMATEUR.

IN olden days, devotees of the black art incurred the risk of being burned as wizards or ducked as witches, according to their kind, male and female, and of receiving other unpleasant tokens of popular disfavour. In our own times, its professors make a very good thing out of it; and the public, so far from wreaking vengeance on them in life or limb, will rush to a 'magical entertainment' with greater eagerness than to almost any other minor form of amusement. But though modern conjurers are in the receipt of handsome incomes, they often meet with disagreeable little incidents in the exercise of their art. Such incidents or accidents necessarily happen to the amateur with far greater frequency than to the professional magician, for to the practised artist they should be well-nigh an impossibility. I was once talking with the celebrated conjurer Herrmann about the recent inventions of Messrs Maskelyne and Cooke and other novelties in that line, and I asked him what feat or sleight he should choose as a crucial test of a good performer. He replied: 'No feat at all; but see how he fails!'—by which he meant me rather to understand, 'see how he avoids palpable failure.' Just as an acrobat is taught how to fall in comparative safety if he 'misses his tip,' so the tyro in modern magic has it impressed upon him from the outset that he must never plead guilty to a mishap; if he cannot do what he originally intended, he must turn or twist the trick into something else.

Unrehearsed effects sometimes produce the greatest *clat*; and seeing that it is not only the 'quickness of the hand' that deceives, according to the generally received notion, but misdirection by the eye and tongue, the ready use and perfect control of those organs are of even greater consequence than digital dexterity. The cleverest of conjurers fails at times to force the particular card he wishes, or finds his calculations otherwise upset; but he must not abandon the trick, or betray by the slightest hesitation or embarrassment that anything is wrong. As a rule, he will look so far ahead of what he is actually about, that when the moment comes for doing anything, it is already done, as far as he is concerned; and the audience

go away mystified with a sort of impression that he has executed no sleight-of-hand at all, from the absence of any parade of rapid movement or manipulation.

Nevertheless, there are certain things—for the most part involving more or less intricate mechanism, or dependent on apparatus liable to damage—which, if they fail in any degree, fail utterly, and bring the Professor to irretrievable grief. Buatier's dissolving bird-cage is an example. This is a small oblong cage about twelve inches in length by five in depth and breadth, made apparently of wire on all sides, which is held in the two hands right in front of or even amongst the audience, away from any table or screen. One, two, three! and it is gone; and the performer allows the spectators to examine him, to ascertain thereby that the cage has not been folded up flat by any means and concealed on his person. The effect is extraordinary, as the cage—innocent of the very possibility of mechanical deceit—seems to have melted into thin air under the very eyes of the audience. The explanation is, that there is a double-rotating hinge or joint in the eight corners of the brass framework, which permits it to fold together end-wise, or rather, corner-wise, in the form of a spindle, the 'wire' of the sides—really black elastic—aiding this collapse by its tension when the framework is released from the oblong shape which is maintained by the hands. Around the right wrist is fastened a strong silk cord, which passes up the arm inside the shirt, across the back and down the left arm, to be attached to a tiny ring, hidden by the ball of the thumb, at the lower and inner left-hand corner of the cage, which forms one extremity of the spindle when collapsed. This cord is of just such a length that when the hands are holding the cage in front of the chest, the arms being bent and elbows close to the sides, it is comfortably taut. Now, it will be seen that if the arms be extended, as they are suddenly and violently at the word 'Three!' the cage being instantly collapsed at the same moment, the latter must necessarily be drawn up the shirt-sleeve, where it will lie along the arm, and allow the coat to be removed by the audience without fear of detection. But it has happened more than once to the inventor himself to experience a hitch at the cuff, and to have the mortification of seeing his collapsed cage dangling ignominiously therefrom, amid the roars of all present. There is no possibility of covering such a failure; the only thing to do is to turn away as rapidly as may be, and confess to a disaster before every one has discovered its precise nature.

This 'dissolving cage' is generally exhibited empty, though there are several forms of the apparatus which may contain any number of living inmates; but these involve the use of a prepared table. Others, again, there are which have hinged sides, so arranged that the whole can be folded so flat as easily to be concealed in a pocket; the cage falls into position by the weight of its floor when lifted by the ring at the top, and is adapted for production from a borrowed hat or pocket-handkerchief, but not for vanishing. A canary is sometimes shown in Buatier's apparatus—generally an artificial and collapsible one, which is made to joggle about on a perch with a very fair semblance of life—at the distance at which it is viewed—by means of a bit of elastic

or fine spiral wire, passing from angle to angle through its body, and capable of being manipulated by the tips of the second fingers, as the hands hold the cage in position. Herrmann, one of our best prestidigitateurs, uses a dummy of this description; but with the wonderful *sang-froid* and dexterity which characterise everything he does, takes a living bird, and apparently puts it into the receptacle, with exquisitely deceptive petting and chirping. He adds a capital effect, too, by 'palming' a little roll of yellow feathers, so that the cage vanishes in a cloud and flutter of these, as though the canary itself had actually melted out of its investiture. Occasionally, I believe, a real bird is employed; and a special modification of the machine, with an extra joint in the middle of each bar of the frame, which would thus grasp the bird in an oval dilatation at the centre of the spindle when collapsed, is manufactured to admit of this being done; but the creature must be tied, or its pressing against the elastic 'wires' would reveal their real nature, and in any case one would imagine that it must be liable to injury.

That ever-popular illusion the globes of gold-fish ought to be tolerably well known by this time, since it forms part of the stock-in-trade, if not the *pièce de résistance*, of every entertainer; but perhaps some of my readers may not be aware of the *modus operandi*. A handkerchief or cloth is waved about, to show that it is empty and free from preparation; then it is held out across the hands, and a glass globe, containing water and living gold-fish, is produced from under it; and this is repeated three or four times. 'Globes' they are called in the programmes; but as a matter of fact they are very different from the aquaria for gold-fish or anemones seen in our drawing-rooms or greenhouses under that designation, being rather large glass saucers. These are fitted with tight india-rubber covers, and, so protected, lie in two large pockets opening perpendicularly in the sides of the dress-coat, or are concealed behind. The cover is removed with the handkerchief. A very effective trick, and easy of execution, but a little apt to be marred by the occasional bursting of a capsule, and consequent cascade of water and wriggling fish down the magician's leg. I have known a cover refuse to come off, too, with very embarrassing results; for, though usually not difficult of removal, they necessarily fit so tightly that it takes considerable pressure to put them on. Sometimes, by way of a surprise, a brass bowl, flaming up a foot high with coloured fire, is brought out after the fish-bowls. This is filled with tow dipped in spirits of wine, &c., and is either ignited with a lucifer-match under the handkerchief, or has a little trigger with a phosphorus arrangement inside—the latter being a very dangerous dodge, as a French conjurer found to his cost the other day, in whose breast-pocket the whole affair took fire prematurely. Delille was once engaged in the performance of an elaborate trick, in the course of which a pigeon is thrown up in the air—or appears to be—and, with a loud explosion, changes into a balloon. The balloon of course opened by springs, which at the same time broke a glass tube containing a detonating mixture of chlorate of potash and sulphur; and the whole lay folded up in a small compass, ready for

use in the *profonde* or inside-tail-pocket. Unfortunately, he passed rather too near the corner of a table in coming forward to the front of the stage, and the audience were startled at seeing his coat-tails blown off with a bang. Whether he was injured or not, I cannot say.

I once witnessed a very ludicrous contretemps of a similar though less serious character. When a hat is borrowed, every one naturally expects that something unusual will presently be taken out of it; and indeed there are probably a plum-pudding, a baby, a cannon-ball, or a couple of live rabbits waiting on the *servante* or shelf behind the table to be deftly introduced; but on his way back to the platform the conjurer generally contrives to introduce something from his pockets under cover of some movement which misdirects the attention for a moment. This something may be a supply of sweets for the juveniles, a score of tin goblets, some hundreds of yards of ribbon, or the wardrobe of the aforesaid baby—all very portable in a condensed form. But perhaps nothing is so showy as a number of gaudy and apparently solid cloth balls. These balls in reality owe their spherical shape to a spiral spring in their interior which admits of their being pressed flat, so that twenty or thirty can thus be packed in a sort of rouleau and carried about the person without difficulty, being held down by threads, which are snapped by the finger in the hat. But a gentleman who was holding an entertainment in a large hall at Southampton had the misfortune to get his thread broken while the rouleau was still in its place of concealment—long before he had come to the hat trick—and balls enough to fill a large bucket immediately expanded in his tail-pocket with astonishing effect.

Rabbits, guinea-pigs, and doves are the livestock ordinarily preferred for conjuring purposes, on account of their quiet and docile nature. They are tamed and well fed, but not necessarily trained for participation in the performance; all that is required of them is, that they shall lie still until they are wanted. The best regulated of dogs will bark every now and then and reveal his whereabouts; while a cat's impulse to hold on with her claws to anything she touches in any unaccustomed position, renders the feline race undesirable as confederates. White rats, squirrels, and monkeys have all been employed, but are of too restless and inquiring a disposition to be eminently fitted for the purpose. Live snakes lend themselves very suitably to these effects, from their adaptability to a most disproportionately small space when concealed, and apparent impossibility of concealment at all when produced, not to mention the air of glamour and *diablerie* they impart. But it is not every one who cares to manipulate living snakes. When M. Herrmann was in Cairo, he procured some non-venomous serpents, in rivalry of a party of snake-charmers who were there, and used them for a time; but although he was perfectly persuaded of their harmless nature, he was sometimes seized with such a horror of them, that he was impelled to rush away, tear off the coat in which they were snugly stowed, and dash it to the ground. Even rabbits and pigeons, however, sometimes bring confusion by wriggling out of pockets prematurely, or by putting their

heads round the corner of the 'table free from all preparation,' into the box from which they have just been 'vanished' through a trap.

To injure a borrowed watch or hat while pretending to do so—to drop a ring or coin and not be able to find it again—to cause a card to 'appear' with a flourish and find it is the wrong one—or to actually burn a lady's handkerchief accidentally, instead of the substitute for which it should have been adroitly exchanged, are calamities more likely to befall the amateur from nervousness or inexperience, than the professional, and are certainly not calculated to reassure his confidence—or that of his victim—for the remainder of the evening. But there is one very annoying circumstance to which both are liable in showing tricks with cards—that is, when, at the conclusion of the trick, the person who has selected a card says: 'Oh, I have forgotten what it was!' or, 'Oh, I never looked at it!' or, worse still, names a wrong one. The whole sleight is entirely brought to nought, and through no fault of the prestidigitateur. He knows very well what the card was—knew it before it was taken; but it will not mend the matter for him to name it; and his doing so would further disclose the fact that a 'force' had been employed, and might perhaps injuriously affect his subsequent feats. This happens more frequently than might be supposed. The same thing sometimes occurs in non-observance of the date or special mark on a coin; the exact number of a quantity of objects requested to be counted privately; or a letter, word, or sentence in a book. Performers who put their trust in complex electrical or mechanical paraphernalia and the collusion of accomplices, instead of legerdemain pure and simple, have only themselves to thank when anything goes wrong.

Some time ago, at a spiritualistic *séance*—the genuine article—a fiery hand was seen waving overhead in the darkness, rushing from end to end of the room with incredible swiftness, now high, now low, and occasionally smiting people on the cheek with the cold clammy contact of *d'* corpse. In spite of the medium's stringent injunctions that no one should move, a gentleman clutched this awful apparition as it swept past him, and, regardless of protestations and threats, refused to let it go until the lights were turned up. Then the messenger from the other world proved to be nothing more supernatural than a dirty white kid glove, rubbed with phosphorus and stuffed with wet tow; this, at the end of a thin line, was suspended from a fishing-rod which could be reduced telescopically to a length convenient for the pocket. Thus the medium could cause all manner of appalling 'manifestations' without rising from his chair.

Few things impress the spectators with a stronger sense of the magician's skill—if not uncanny dealings with the powers of darkness—than his catching between his teeth a marked bullet fired from a pistol by one of the company—they themselves having ascertained by minute inspection that the weapon has no speciality about it, and that the powder and ball with which they load it are genuine. The performer stands with his hands behind his back; careful aim is taken at him, the trigger pulled; and without stirring, he allows the marksman to step up and remove the

bullet—identified by a secret cut or mark—from his mouth—a feat well calculated to produce an astonishing effect and ‘bring down the house.’ M. Robert-Houdin, I believe, was the inventor, though he performed it in a different manner from that usually adopted by his successors. His pistol, powder and cap, were all destitute of guile; but the leaden bullet chosen was dexterously exchanged for one made of graphite or plumbago—ordinary pencil black-lead—and this was smashed to powder by the ramrod in pressing it home. Though he employed this illusion most successfully in his diplomatic mission to Algeria, in which he was employed by the French government to undermine, if possible, the supremacy which the marabouts by their pretended miracles had acquired over the minds of the superstitious Arabs, such a method is now considered open to two great objections. The first—a very tangible one—was demonstrated to the originator himself before the close of his career by a severe wound which he received, owing to the fragments of the brittle ball not having been sufficiently stamped to powder. The other lies in the fact that, although a real bullet is selected by the spectator, it must be placed in the conjurer’s hand for introduction into the firearm, in order to admit of the substitution; for the nature of the black-lead missile would be immediately obvious by reason of its light weight.

Mechanical pistols, not permitting examination, in which the projectile drops into a secret chamber by the action of springs on the pulling of the trigger, will be beneath the consideration of the true artist, as well as being dangerous in the highest degree. The mode of performing this surprising trick at the present day is as follows: one member of the audience places in the pistol or rifle—an ordinary one—a charge of real powder; a second is asked to choose and privately mark a real bullet from a box of such, which he himself drops into the barrel, and a third rams the whole tightly down with the ramrod, either retaining possession of the weapon from that moment, or passing it to some one else. But in the act of moving from No. 1 to No. 2—that is to say, between the introduction of the powder and the ball—the performer, while calling general attention to, and laying great stress upon the circumstance that three or four people take part in the loading and not one only, who might be a confederate, slips into the barrel a little tube about an inch in length, which slides down to the charge, and afterwards receives the bullet. This tube, closed at one end, is of just such a size, shape, and colour as to fit on the end of the ramrod, and be brought away with it without being noticeable. It is disengaged by the wizard, and the ball secured as he walks back to the stage, and is put inside the lips in readiness in the very act of showing that the mouth is empty.

The great difficulty which occurs in the execution of this feat is to induce the casual spectator to take deliberate aim at one’s face; so impressed is he, as a rule, that the weapon he holds is genuinely loaded, that he hesitates to let fly at the performer, and will rather fire in the air. This of course spoils the effect altogether, unless the conjurer has presence of mind enough to pretend to catch the bullet as it falls. Houdin, who was pre-eminent for neatness and

finish, used to conclude this trick by making a long palaver about the mysterious properties of lead in extracting vital essences from the body; then firing the bullet himself at a whitewashed wall, and producing thereon a splash of red, the ball having been exchanged this time for a hollow shell of black wax filled with a blood-coloured liquid.

Robert-Houdin no doubt raised prestidigitation to the science in which it stands at the present day, when the Royal Society does not disdain to listen to speculations as to the real nature of some of its recent manifestations; and chemistry, electricity, optics, pneumatics, and most of the ologies are pressed into its service. He was the first to discard the flowing robe and other traditional paraphernalia and reduce the accoutrement of the modern sorcerer to ordinary evening dress with a skeleton table, holding that true skill lay in concealing not only ‘how it is done,’ but ‘how it might be done.’ But as an actual performer, it is questionable if he was the equal of Herrmann and several of the more modern professors. The paternal mantle has fallen upon the shoulders of M. Robert-Houdin *filis*, who, as a little boy, used to assist his father in many illusions which he created; but the son devotes his talent chiefly to the construction of exquisite automata, which he exhibits, in conjunction with sleight-of-hand, at his pretty little boudoir theatre in Paris. His countrymen seem to be born conjurers. Only a short time ago, I saw one of them execute a very pretty little trick, solely, I might say, by virtue of his being a Frenchman; a trick, at anyrate, which would not have been so characteristic of an Englishman. Coming forward on the stage as the curtain rose, he made an amusing introductory speech with much characteristic gesticulation, hands extended and shoulders shrugged up to his ears; then he breathed on his gloves, and presto! they vanished. The gloves—I got it from him afterwards—had no backs to them, and were secured only by the tips of the fingers, which barely covered the nails; a piece of strong elastic ran in a hem round the margin of each and kept them in position, the end passing up the sleeve, to be attached to the back of the waistcoat. A slight flexure of the fingers, therefore, freed them and caused them to fly away with lightning rapidity; but everything depended on the palms being alone exposed, Frenchman-like, all the time. Address is much more than half the battle which the magician has to fight single-handed with the army of watchful eyes which encompass him.

A good story was going the round of the papers some months ago to the effect that Herrmann while in the River Plate was giving a private representation before the Patagonian chiefs, and, though exerting his wonderful abilities to the utmost, was somewhat annoyed at the stolidity and apparent lack of surprise with which they received the marvels displayed. Showers of gold and packs of cards were made to fall from their ears and noses, dozens of eggs from their pockets, and live canaries from their hair, and still they sat on undismayed. At last, after the entertainment was over, it was discovered that one of them had abstracted a valuable gold watch from the Professor’s fob while the latter was disengaging a miraculous fowl

from the savage breast; and that the untutored mind of another had led him to improve the occasion by annexing a handkerchief and pencil-case. A very good yarn, but—like many other good yarns—absolutely untrue, and even without colourable foundation. I was there at the time.

Every one knows the dodge of thrusting a finger through a hat. A wax finger—to be bought in any toy-shop for a shilling—amputated, as it were, about the second joint, at which point it is armed with a needle, is concealed in the palm of the hand. Under cover of the hat itself, the needle is made to pierce the crown from the outside, and is then manipulated from within, giving at a little distance a very natural appearance of the forefinger thrust through and shaken derisively. Such things do not constitute tricks in themselves, but are employed by performers as interludes to keep up that general atmosphere of magic and 'nothing impossible' which should pervade their entertainments, or to divert attention for a moment from some important step. Acting on this idea, I had made as novelties, but precisely on the same principle—namely, the needle—a wand, a half-crown, a cigar, and a candle, for piercing a borrowed hat; with all of which an amateur friend was so delighted, that he borrowed them for a public performance. The finger he had before; and on the eventful night used all five with great success. 'There is no deception, you observe, ladies and gentlemen,' he insisted. 'See; it is just as easy for me to thrust this wand through, as my finger. Here is a half-crown which will penetrate with equal readiness—I will leave it half through, so that you may all see it. This cigar, as you witness, pierces it like a gimlet (a *very* soft felt this, sir!); we will leave it there too. Why, I shouldn't wonder if this candle—yes, actually! a common tallow candle transfixes it like a poniard! Well, I will light the candle and leave the hat in that position, while I ask some lady to be good enough to lend me;' &c. Unfortunately, he left not only the wand, cigar, half-crown, and candle sticking half through, *but his finger also*, when he placed the hat on his table and once more descended from the platform!

As an amateur conjurer myself, I have met with a share of ludicrous and, for the time, disagreeable incidents. Queer are the vicissitudes which befall one in out-of-the-way localities. I have performed before audiences—fairly large ones too—which could not boast of a tall hat or a white handkerchief amongst them. On one occasion, I drove fifteen miles to a country town with two big boxes of paraphernalia, only to find that a mistake had been made in the announcement, and that the already assembled audience—of a somewhat serious cast—would stand nothing more frivolous than a Lecture on Snakes—a favourite subject of mine. On another, when I was destined to occupy the second part of the evening, the first being filled by an amateur orchestral concert, I was horror-stricken when I arrived to see the local orchestra in possession of the stage where I had already 'set' my table; the big drum and double-bass banging against it, and music-books up-setting all my precious gear; while the raw mechanic's dirty thumb—the nail of which marks like a black-

lead pencil—was indelibly impressed on everything. I have given entertainments in countries where the spectators brought in eggs and dead cats with them, in readiness for anything that might not happen to please them, and where the sentiment of popular or personal disfavour finds expression through the revolver more quickly than by speech. But perhaps the most embarrassing episode that ever happened within my individual ken occurred in the south of England, where I once supplemented a bazaar in aid of some church matter or parochial charity—I forget what—with an evening performance, and the rector, who took the chair, opened the proceedings with a short prayer!

JOHN GOW, THE BUCCANEER.

A TALE OF ORKNEY.

It was in or about the year 1727 when the war-ship *Revenge*, carrying a heavy armament of guns, and commanded by Captain Gow, sailed into the harbour of Stromness. The arrival of such a formidable-looking vessel caused quite a commotion in the little seaport town, and not a little anxiety as to the intentions of the rakish-looking craft, with her motley crew of English and foreigners, who resembled pirates much more than honest Jack-tars. But the fears of the townsfolk were for the time being quieted when the Captain of the *Revenge* landed, and announced himself to be a fellow-townsmen—one John Gow, who had run away to sea some twenty years before. Fortune had smiled on him, he said, and he now held the position of Commander of His Britannic Majesty's ship *Revenge*. This and a great deal more was told by Captain Gow to the simple townsfolk, who fêted and feasted the gallant sailor, believing implicitly what he chose to tell them, and never suspecting for a moment that the man they so hospitably entertained sailed under the Black Flag, and was one of the most noted buccaneers on the high seas.

Time passed away, but still the *Revenge* lay at her moorings, and her commander—his popularity undiminished—exchanged hospitalities with the townsfolk, spending most of his time ashore, drinking, dancing, and making love; for the bold pirate was an adept at all three; and if the gentlemen declared he was the prince of good fellows at the social board, the ladies pronounced him a *preux chevalier* in the ballroom.

Days became weeks, and weeks months; rumours arose, vague at first, then more definite, and at last the fact became known, that the 'gallant Captain' did not hold His Majesty's commission, but, on the contrary, was known far and wide as 'Gow the Pirate.'

The townsfolk dared not hint their lately acquired knowledge to the Captain; but the change in their manner told its own tale, and he quickly guessed his plausible story was no longer believed. Meantime, having spent his gold freely—and being rather hard up in consequence—he

began sending parties of sailors to the neighbouring parishes, to drive off cattle and sheep, for the consumption of himself and his crew. In some instances, the farmers stoutly resisted the marauders; but they only got knocked on the head for their pains; and in a short time the utmost terror prevailed when it was known Gow or his lieutenants were going on a foraging expedition. Though the pirate punished the country-people, he spared the townsfolk, perhaps from some feeling of compunction after having shared their hospitality; perhaps because it didn't suit his plans to have all the country combining against him. Be that as it may, the burgesses dwelt in safety, though they trembled in their shoes, and prayed earnestly that they might soon see the last of the *Revenge* and her roystering crew.

Matters were in this state, when one afternoon Captain Gow swaggered into the principal inn of Stromness, called for a glass of brandy, and sat down. Presently in walked Mr Halero, the Laird of Coubister, an estate some miles distant. Gow greeted him cordially, called for more brandy, remarking that a man's own company was the worst in the world, and he always drank more comfortably when he had a friend to keep him in countenance. Mr Halero, who had previously found the dashing sailor the most jovial of boon-companions, was nothing loath to pledge him in the potent liquor, which soon dispelled all remaining doubts regarding his honesty; so much so, that Laird Halero became more confidential than was prudent about his private affairs, boasted the number of his cattle, sheep, and horses, and lauded not a little the housewifely qualities of the Lady of Coubister. Her butter and cheese, he declared, were famed throughout the country-side, and she could serve up a dinner that the king himself might be proud to eat.

To this, and a great deal more, did the pirate listen, with laughter twinkling in his eyes; and when the Laird paused for lack of breath, he slapped him on the shoulder, exclaiming: 'She must be a likely dame that of yours, and worthy to be Lady of Coubister. But hark ye, friend; your Dame and you can't possibly eat all those beeves you were telling me of. So, by'r leave, I and my sea-cocks will e'en come round to-morrow and relieve you of a few; yes, and tell your lady to have a dozen cheeses and a couple of kegs of butter ready for us besides.' After this unexpected speech, he rose, nodded carelessly to Mr Halero, cocked his hat knowingly, and strode out of the tavern.

One may fancy the reflections of the Laird of Coubister when left alone. For the moment he felt stunned at the thought of the threatened raid on his house and property; but recovering himself with an effort, he paid his reckoning, called for his horse, and was soon galloping home to tell his wife how ill he had fared in his dealings with Captain Gow.

Arrived at Coubister, he hastened to the kitchen, where he found his wife engaged in baking 'mautie foals'—malt cakes—a dainty peculiar to Orkney. Tall and stately was Dame Halero, who in her youth had been a beauty and a toast. But time, though it added rather

than detracted from her dignity, had sharpened the once comely features, and thickened the shading on her upper lip.

Great was the astonishment of the Lady at seeing the Laird—she had not expected him till the morrow; but without giving her time to express it, he hurried her into the dining-room, and shutting the door, very quickly informed her what they had to expect from the pirate Captain, winding up his tale by asking what they should do.

Dame Halero, seated in the great arm-chair in the ingle nook, scarcely seemed to have heard him, for she answered never a word, but stared into the fire, while the Laird strode up and down the room, banging the furniture, and muttering to himself. 'It's not that I'm afraid o' the rascal or his cut-throat crew,' he declared; 'but the house winna fortify; and what can I do wi' a handful o' raw country lads who can neither load a matchlock nor handle a sword? What is a man to do when he can neither fight nor flee?'

Presently this monologue was interrupted by Dame Halero, who remarked in a soothing tone: 'Ca' canny, Laird, and dinna break the chairs. It's clear to me your friend the Captain will come to the house; but it's not so clear he'll carry more awa' wi' him than a good dinner and plenty o' punch to wash it down.'

At this confident speech, the Laird halted before his wife's chair, and in an incredulous tone, asked her what she meant.

'Well,' returned she, 'if ye'll no glower at me that way, I'll tell ye what I mean. Folks say Captain Gow is no ruffian, but quite a gentleman. Now, my plan is this. We'll give him a warm welcome, and a good dinner wi' plenty o' reeking punch; and after a' that, he winna hae the heart to rob us. Hey, Laird, what think ye o' that plan?'

'Think!' ejaculated her husband; 'why, I think ye're an angel, goodwife.'

The Laird and his Lady talked long and earnestly over the ways and means of furnishing out such a feast as would soften the pirate's heart, and make him forego his purpose of driving off the Coubister cattle.

After the consultation, the Dame went to the larder and thence to the kitchen, where such culinary preparations began as were seldom seen there, except it might be at Yule-tide and Hallowmas. The Laird too was busy overhauling the cellar and giving orders about the wines and spirits required on the morrow.

Next morning all were early astir at Coubister, and such preparations for good cheer were made in the dining-room as would have gladdened the heart of a *bon-vivant*. The table glittered with a goodly array of silver flagons, tankards, and trenchers, all emblazoned with the Halero crest. And while the wines of Portugal and France sparkled in tall decanters, the native brew of ale and whisky was not forgotten.

The morning had been foggy; but towards noon the mist rolled off the hills and the sun shone out gloriously. About two o'clock, Mr Halero espied a boat pulling in the direction of Houton Bay, which he soon made out to be that of Captain Gow. Hastily informing his wife of their guest's approach, he hurried to the

beach just in time to greet the pirate as he leaped ashore. Gow stared hard at the Laird, who, affecting not to perceive his astonishment, shook him heartily by the hand and welcomed him to Coubister 'with the greatest cordiality.' Then desiring the sailors to follow, he walked with their Captain to the house, chatting all the way of the pleasure it afforded him to entertain such a capital fellow as his respected friend beside him. His wife, he declared, was even more delighted than himself, and was exerting all her culinary skill to offer such a dinner as would leave a pleasing remembrance of his visit.

The pirate captain listened with rather a grim smile to Mr Halcro's polite remarks; but beyond a few words expressive of his thanks for the intended kindness of the Lady of Coubister, he preserved a stolid silence till the Laird ushered him ceremoniously into the dining-room, and begged him to rest in the great arm-chair before a blazing peat-fire. Then he laughed loud and long, and as his eyes rested on the well-spread table, exclaimed: 'Ha, Laird, so your dame is going to treat me to just such a dinner as you boasted of last night; and as I'm rather sharp-set, after pulling against the wind for the last two hours, the feast has a fair chance of having justice done to it.'

At this moment the soup was placed on the table, and the Laird, apologising for the absence of his spouse, as her presence was required in the kitchen and the servants' hall, where the sailors were by this time dining, invited his guest to place himself at the table; and then the feast began.

Both the Laird and the Captain were gallant trencher-men, and great were the gastronomic feats they that day accomplished. Small wonder was it they so earnestly devoted themselves to the pleasures of the table, for the fare was of the best, and very curious were some of the dishes—dainties peculiar to Orkney, and as such, greatly appreciated by Gow. Many a bumper did he drain to the health of his host and hostess, and often did he swear it was the best dinner he had ever eaten. Then, when the cloth was drawn, and the Laird proceeded to brew the punch for which he was famous, and which his guest declared to be the primest stuff he ever tasted—when the bottom of the punch-bowl became visible, and twilight began to deepen into darkness, the pirate Captain started to his feet, and declared his resolution, because of the hospitality he had received, not to touch anything belonging to such worthy people. But one thing he must have, before he turned his back on Coubister, and that was 'a kiss from the goodwife.'

Loud laughed the Laird at the pirate's proposal. 'Ha, ha!' chuckled he; 'easier said than done, sir.'

Away went the Laird in search of his wife, and found her, not many yards distant from the dining-room door. Laughingly, he informed her of the honour in store for her, and she in no amiable tone muttered: 'Lend me your arm, Laird, for we must not give the Captain time to change his mind.'

When the worthy pair entered the room, they found Gow standing with his back to the fire, the last glass of punch in his hand. Hastily setting down the glass, he advanced to meet

them, and bowed low to the lady, who, acknowledged his politeness with a stately courtesy. He then led her forward till she stood in the full glare of the firelight. Again bowing over the hand he held, the pirate said: 'I esteem it an honour, Madam, that a high-born lady like you should so condescend to a poor sailor, who deserves nothing at your hands. Fame has not lied when it proclaimed you the stateliest of Orkney's matrons. And now, by'r leave, Madam, just one kiss, as a remembrance of this most pleasant visit.' And gallantly encircling her waist with his arm, he gave her a hearty salute. Then taking his glass of punch from the mantel-shelf, he tossed it off, crying: 'To your health, Dame Halcro; may your life be long and happy! Farewell; but fear not for the bonnie beeves of Coubister; they will remain scathless; John Gow pledges his honour for their safety.—Farewell to thee too, most hospitable Laird; and when in future thou'rt in thy cups, keep a closer tongue in thy head than thou didst yesterday.'

Saying these words, the pirate Captain assumed his cloak and rapier, and placing his cocked-hat under his arm, turned again to his host and hostess, adding: 'In the years to come, if rumour deals harshly with the name of Gow, mayhap ye may speak a kind word for the roving buccaneer. Farewell, good people.'

He was gone the next moment; and immediately a shrill whistle was heard, which brought the sailors on the lawn in front of the house. Then waving his hand to the Laird and his lady—who had followed him to the door—the pirate and his men quickly disappeared in the gathering darkness.

It is needless to add, the property of the Laird of Coubister was held sacred by Gow during his sojourn in Orkney. And when he fell into the hands of justice and expiated his crimes on the scaffold, Dame Halcro dropped a tear to his memory, declaring 'twere pity such a gallant gentleman had fallen on such evil days.' And the Laird declared 'it was a sin and a shame to hang so pretty a fellow, who, had he been pardoned, might have fought His Majesty's battles either on land or sea, and proved himself a loyal subject.'

LITTLE HEROES.

THE heroism of men and women is often chronicled and rewarded; but there are instances of courage and presence of mind displayed by the little heroes of the world which are equally deserving of recognition. The medal of the Royal Humane Society might, for instance, be less worthily bestowed than on the child of four years of age, who deserved it for performing a courageous act at Dunham-Massey. One day, he and some other children were playing on the banks of the canal near the Bay Malton, when a girl aged seven fell into the water. When she came to the surface, the little fellow threw himself at full length and seized her by the hair. The cries of the children attracted the attention of a passing bicyclist, who came to their assistance, and pulled the girl out of the canal. Had it not

been for the presence of mind of this courageous little fellow, the girl would in all probability have been drowned.

From Dover comes an account of a similar plucky rescue by another boy. It appears that a little girl, aged about four years, was playing in the surf on the sea-shore, when she was knocked down by a wave before she had time to get out of the way. The little fellow, named Friend, who is only about seven or eight years old, was also playing on the beach; and seeing the danger in which the little girl was placed, with great presence of mind, although not without risk, ran in and pulled her out. A coastguard came up immediately afterwards, and the girl was removed home very much exhausted.

Devonshire has the honour of producing the youthful heroine, Miss Esther Bowden, who courageously saved the life of her governess, and received the Royal Humane Society's medal and a handsome testimonial recording the circumstance. So far as we can recollect the particulars, it seems that while taking a country walk, the governess, in attempting to reach some flowers, fell into a deep pond. Our little heroine, of only eight years of age, caught her by the hair, and though dragged out of her depth herself, courageously continued her hold, and seizing some overhanging roots, called for help, until both were rescued by some one opportunely arriving on the scene.

At a pond in East Dulwich, an accident occurred, which, but for the gallantry of a boy aged eleven, named Otto Helstern, would have had fatal results. Some children were playing about the margin of the pond, when one of their number, only seven years of age, was seen to slip from the embankment into the water where it was some six feet deep. An alarm was raised by the terrified children, when our youthful hero, who had been bathing, and was proceeding home, returned to find the poor little fellow sinking for the second time, head downwards. Without waiting to divest himself of any clothing, the brave lad plunged in, and with some difficulty, owing to the mud, brought the drowning boy to land, where by this time several persons had arrived to render aid. The rescued boy remained insensible for some time, but by judicious treatment was gradually restored to consciousness, and enabled to proceed home.

Two brothers were skating in Cincinnati, and broke through the ice. While they were clinging desperately to the edge of the ice, and efforts were being made to reach them, the elder one cried out: 'Be sure and take Willie out first.' But both Willie and his generous brother were drowned.

A gallant rescue in the river Severn was effected by a lad of twelve. His companion, a boy somewhat older than himself, bathing in that river, was floating on his back, when the current carried him out into mid-stream. On finding he was out of his depth, he lost nerve, and sank in twelve feet of water. His young friend, on seeing him sink, at once swam to the spot, dived into the deep water, and succeeded not only in fetching him up, though in an unconscious state, but in swimming with him to the shore, where, assistance being at hand, the lad was brought back to consciousness.

An act of courage and devotedness on the part of another boy merits a record amongst deeds of bravery. Two children, of the ages of five and seven years, fell into the Lake of Geneva from the end of a pier. A third child, named Bataillard, thirteen years of age, who happened to be near the spot, immediately threw off his clothes, plunged into the lake, and diving, had the happiness of bringing both the drowning children safely to land.

There are many examples of youthful heroism in perils of land as in perils of water. When Paris was attacked by the allied armies, it was the pupils of the Polytechnic School who served the artillery on the heights of Montmartre, and by their well-directed fire filled the approaches to the positions with dead bodies of the enemy. Many a drummer-boy, as is well known, has acquitted himself as creditably in the hour of danger as any old campaigner. Louis Pajot, a drummer in a French battalion, was in some of the hottest affairs between the French armies and the allies. In the engagement before Valenciennes, out of twenty drummers who beat the charge, nineteen were killed. Pajot alone survived, but severely wounded. In spite of this, he continued beating the charge till the enemy were routed, which was not till about four hours after receiving his wound.

This little hero was if anything surpassed by a boy aged thirteen, the sole child of a widow. Equipped as a drummer, he marched at the head of a Republican regiment. He was cut off and surrounded by two hundred royalists. To give the alarm, he continued beating his drum. 'Cry *Vive le Roi!*' said the royalists. He preserved silence. The soldiers' guns were levelled at him. 'Cry *Vive le Roi!*' was again demanded. He beat rapidly the drum, and placing the sticks above his head, shouted: '*Vive la République!*' In a second he was a corpse.

THE HEDGEHOG—DOMESTICATED.

THIS curious-looking animal serves a distinct purpose in creation by destroying slugs, caterpillars, and numerous smaller vermin, which, though they are to a certain extent useful, are nevertheless destructive to vegetation in general. Beetles and cockroaches seem to belong to that class of insects the uses of which we find it so difficult to discover, and therefore devise every means to expel from our dwellings. The writer's house being overrun by these pests, and other efforts at extermination being useless, he applied to a farmer friend to supply him with a hedgehog; which he obtained, and has now had in his house—in a large town—about four years.

During the first year, Tommy—as the cook christened him—retired for about two months to a bed of withered grass underneath the rain-tub in the yard, according to the custom of his kind in winter. Prior to this, however, he had a plentiful supply of beetles, which might serve him to ruminate upon for many a day. He lived in a closet underneath the stairs, from which he sallied forth into his hunting-ground, the kitchen. Like other beasts of prey, this occurred during the dead hours of the night.

When beetles became scarce, however, his operations were watched by the dim gaslight, and

it was evident that he was guided more by scent than sight. He worked the floor as a pointer-dog works his field; and when he crossed the trail of a beetle, even a few inches from him, he became excited, and putting his nose to the fresh scent, followed up his prey. Further evidence of this feature was observed by his discovery of a crevice in the floor, where he exhibited a singular mode of proceeding. Discovering by smell that his game was there, he inserted his hind-leg—the front one probably being too short—and grasping with his claws, dragged out the black beetles one by one and gave them quick despatch.

But the tameness and apparent intelligence of the animal are his most interesting characteristics. The winter sleep is almost abandoned now, or is very short at the most, and in lieu thereof he comes into the kitchen at all hours, getting inside the fender, and stretching himself out before the fire for a snooze. He eats any pickings he can get, sharing the bones with the dog, lapping from his dish of water or milk, not sucking it up as a pig does.

But it is very remarkable to find him 'tapping at the door.' If, after taking a stroll in the back-yard, he finds the door of the house is shut, you hear a gentle tap, tap, tap, often repeated if you don't answer. You go and gently open the door; and the little animal actually tries to look you in the face, by turning up its nose and small pig-like eyes; which you at once interpret—'Oh, thank you; I have been waiting here for some time,' as he mounts the step and walks in.

It may be thought such an animal in the house would be dirty. Not so. When you discover any smell, the odour approaches that of musk; moreover, the children are quite familiar with it, and take it up and let it eat from their hand.

Country boys, on meeting with a hedgehog, but too often think it a duty at once to kill the poor creature, utterly ignorant, like many bigger boys and older men, of the services such animals perform in the economy of creation.

KNITTING OF STOCKINGS BY THE ANCIENT EGYPTIANS.

Our contemporary, the *Textile Manufacturer*, says: 'The Egyptians of the present—Kopts as well as Arabs—run about with bare feet. The ancient Egyptians, on the contrary, who are now only to be seen in a dried condition in museums, possessed a very good method of knitting stockings, as is shown in the collection at the Louvre in Paris. In the grave of a mummy there were found a pair of knitted stockings, which gave the surprising evidence, firstly, that short stockings, resembling socks, were worn by the ancient Egyptians; and secondly, that the art of knitting stockings had already attained great perfection in ancient Egypt. These curious stockings are knitted in a very clever manner; and the material, fine wool of sheep, that might once have been white, is now brown with age. The needles with which the work was done must have been a little thicker than we should choose for the same purpose, and the knitting is loose and elastic. The stocking is begun just as we make the design,

only in the simplest manner, with single thread; but in the continuation of the work it is not simply plain, but fanciful. The usual border of the stocking which prevents the rolling up of the work is narrow, consisting of a row of turned loops; and the circle, the nicely-shaped heel, which is a little different from our method, show a very skilful hand. But in the point of the stocking there is a characteristic difference between the Egyptian stockings and our modern socks. While ours end in a rounded point, the Egyptian stockings run out in two long tubes of equal width, like the fingers of a glove. This strange shape is made to suit the sandals, which are furnished with a strap, fastened about the middle of the sandal; and as the strap has to be laid over the stocking, the division is needed.'

IT IS WELL.

'Is it well with thee, and with thy husband, and with the child?' And she said, 'It is well.'—2 *Kings*, iv. 26.

Yes; it is well! The evening shadows lengthen;
Home's golden gates shine on our ravished sight;
And though the tender ties we strove to strengthen
Break one by one—at evening-time 'tis light.

'Tis well! The way was often dull and weary;
The spirit fainted oft beneath its load;
No sunshine came from skies all gray and dreary,
And yet our feet were bound to tread that road.

'Tis well that not again our hearts shall shiver
Beneath old sorrows, once so hard to bear;
That not again beside Death's darksome river
Shall we deplore the good, the loved, the fair.

No more with tears, wrought from deep, inner anguish,
Shall we bewail the dear Hopes crushed and gone;
No more need we in doubt or fear to languish;
So far the Day is past, the journey done!

As voyagers, by fierce winds beat and broken,
Come into port, beneath a calmer sky,
So we, still bearing on our brows the token
Of tempest past, draw to our Haven nigh.

A sweet air cometh from the Shore immortal,
Inviting Homeward at the day's decline;
Almost we see where from the open portal
Fair forms stand beckoning with their smiles divine.

'Tis well! The Earth with all her myriad voices
Has lost the power our senses to enthrall;
We hear, above the tumult and the noises,
Soft tones of music, like an angel's call.

'Tis well, O friends! We would not turn—retracing
The long, vain years, nor call our lost youth back;
Gladly, with spirits braced, the Future facing,
We leave behind the dusty, foot-worn track.

CHAMBERS'S JOURNAL

OF

POPULAR

LITERATURE, SCIENCE, AND ART.

Fourth Series

CONDUCTED BY WILLIAM AND ROBERT CHAMBERS.

No. 991.—VOL. XIX. SATURDAY, DECEMBER 23, 1882.

PRICE 1½d.

IS MERRIMENT DECLINING?

THERE is an impression prevailing that the present is a somewhat mournful period; and that as man grows wiser his capacity for mirth grows less. It is remarked that our lighter literature has lost in jocundity during the past twenty years. No one has succeeded Dickens in broad hearty humour. We have no audacious versifier like 'Ingoldsby.' No half-smiling, half-cynical humorist has followed the lead of Thackeray into the follies and vices of higher society. Eccentricity is disappearing among the less polished of the people. Cabmen, clodpoles, and costermongers neither use the quaint locutions of former times, nor do they indulge in buffooneries to the extent of their predecessors. 'Chaff' is not so pertinent as it was; badinage is less relished in the clubs; tomfooleries have become intolerable.

Many social gatherings are bankrupt of joy. The class of merry diners-out, who once set the table in a roar with their madcap sayings, funny stories, and nimble repartees, those jolly fellows are becoming historic. The survivors do not evoke the tempests of cachinnation that once shook the dinner-table. Somehow, old-style jocularly has lost its savour.

Bacchanalian songs have quite disappeared, even from the symposia of students and tavern roysterers. From negro minstrelsy, too, the fun is exhaling. The modern playwright does not add much to the gaiety of life. Typical characters have been 'used up' long ago; and the decay of oddity and eccentricity robs the dramatist of new models. A few years back, a new style of comic songs appeared, often inane in the text, but blithesome in tune. Certain sections of society were greatly entertained by them. Yet these are vanishing. Christmas pantomimes have delighted several generations. But at length, the 'Clown' fails to rejoice the youngsters by his grotesque ill-treatment of the Pantaloon and the police. His knavish escapades and burlesque benevolences do not evoke the delirious approbation of former

days. And the moving melodrama of Punch, which for a couple of centuries interested the youth of Europe, has lost much of its glamour for our urchins. The thin and incredulous crowd that condenses round the perambulating abode of the cynical hunchback, grows continually less; and the income of the showman dwindles portentously. For the twentieth century, it is to be feared Punch will be an archaeological reminiscence, which will furnish a theme for the learned. In our ears resound the last bursts of laughter excited by his marital unkindness and the indignation of his dog Toby.

With moribund Punch are dying those antique festivals of which he was an important, nay indispensable feature. The puppet-show goes far away into time. Railways have killed the great fairs that used to be held in every part of Europe, and which gave the international multitudes opportunities for pleasure in the intervals of business. Village 'wakes,' formerly universal in England, have fallen into desuetude. May-day brings no rejoicings as of yore. The Maypole has lost its significance, and a group of morris-dancers would astonish our present rustics as much as Harlequin and Columbine would if they performed a lilt upon the Thames Embankment. Only draymen and carters pay homage now to the genius of Spring. They adorn their steeds with gay ribbons and furbished harness, when the merry month opens. But there is something fictitious in the observance, and it will fade as the homage of the sweeps has done. The sooty pantomimists who used to dance round Jack-in-the-Green, no longer impede the traffic of London thoroughfares. An unsympathetic police bade them, with other anachronisms, 'move on' long ago. The fiery carnival of Guy Fawkes has been extinguished by the same authorities. Only here and there is the effigy of 'Guy' to be seen on the fifth of November dodging the guardian of order in the streets. Bonfires, squibs, the salvos of Lilliputian cannon, are forbidden; ay more, are voted unmeaning nuisances by the adult public.

Christmas, too, grows yearly more grave. Even the strait-laced, the dyspeptic, and the saturnine formerly agreed to be jolly and *sans souci* at that gracious season. To be hospitable and to lavish hospitalities then, was deemed an imperative duty. Kill-joys might snarl and scoff at every other festivity, but to abstain from the wassail of Yuletide was equivalent to *lèse-majesté*. Immoderate indulgence in eating, drinking, and dancing was not only allowed, but encouraged by moral custodians. For a time the machinery of society was allowed to run out of gear—misrule reigned in place of law. If we have not 'changed all that,' we have vastly modified the licensed dissipation of Father Christmas. Enjoyments are less gross, less prolonged, more intellectual, less sensual than they were 'forty years ago.'

The same may be said of the festivals of Easter and Whitsuntide. They are no longer marked by drunken orgies, by ribald pleasantries, by street jokes, as of old. Not that these have quite disappeared. Roughs, blackguards, and inebriated buffoons still accentuate our holidays with the marks of coarser times. But the public is against them, and their ideas of merriment are an offence to all of higher taste.

Nor is the sombre shadow falling upon British mirthfulness absent from other European countries. Modern Frenchmen are not so gay as their fathers were. They are losing that boyish *insouciance* which made them seize pleasure without effort. Cafés are more frequented than ever; theatres are densely crowded; racegrounds are black with excited spectators; and summer holidays are more enjoyed than before the era of railways; still, the face of Jacques Bonhomme has lost much of its old vivacity, and is sicklied o'er with nineteenth-century pensiveness. The old Gallic *abandon* has gone from rural and civic hearts, and an indefinable inquietude has taken its place.

Italians have not been noted for joviality at any period. Serene lassitude, puerile trivialities, varied with frenzied lottery-gambling, have marked the intervals of serious business. But the Carnival provoked such merriment as the nation was capable of, and foreign onlookers often wondered how men and women could find pleasure in the childish nonsense indulged in. Now, the Italians themselves wonder where the fun lies in silly practical jokes; and they also ask is it necessary to spend eleven days in a saturnalia which has quite lost its significance. Were it not for municipal subventions and the astuteness of interested shopkeepers and hotel proprietors, the Roman Carnival would soon cease. Even in the Eternal City, the spirit of commercial utilitarianism has penetrated, and will end by abolishing a festival which it has already condemned as ridiculous. And not only in Rome is the Carnival decaying; it is moribund in every part of the Peninsula, and indeed of the Catholic world. The number of religious holidays grows less, too. Business cannot be interrupted nowadays, when it has passed from the locality to the whole world. France, Italy, Spain, Austria, and other Catholic countries are bound by the telegraph, the Stock Exchange, and the ten thousand strands of trade, to do as Britain and America do, or take the disastrous consequences of negligence.

In the United States, where business is more developed than in England, where it is the occupation of a whole people, holidays of a formal kind are fewer than elsewhere. On the fourth of July the nation rejoices universally in the anniversary of its independence; on the first of June it commemorates its fallen heroes, who gave their lives to maintain the Union. Whatever further relaxations are indulged in are according to the taste and financial capabilities of individuals. This, indeed, is the distinction between modern and ancient times. Formerly, the people amused themselves *en masse*, and at stated periods. Nowadays, individuals take their pleasures when and where and how they please. Superficially, the inhabitants of the United States seem to be immersed in almost incessant toil. Fundamentally regarded, they are the greatest holiday-makers of the age. Rich and poor alike, when opportunity serves them, seek large and varied repose—not by hallooing in the streets, not by crowding into murderous congestions in some particular spot, but by dispersing over the whole planet.

This brings us to answer the question we started with: Is merriment declining? Fully and frankly, we say *No*. The quality of merriment has changed, but the quantity of it now diffused through the Caucasian family of man is greater than at any previous time. Gregarious merriment has given place to personal merriment. We do not laugh *en bloc*, as the Athenians did at the comedies of Aristophanes; but the audiences of a hundred theatres delight in the doings on board H.M.S. *Pinafore*. The merry tales which amused the idlers of the Forum and market-place are now read by millions in every place. Verbal drolleries emitted from London, New York, Melbourne, or Calcutta, are despatched in printed form to every part of the earth, and tickle the fancy of innumerable readers. Could the hurricane of laughter they provoke be concentrated, it would stun the ears of humanity more than the most stupendous clamours of the elements. Weak as the comic journals of Britain, America, and France may be at times, the quantity of real humour they create in a year is extraordinary. If we compare any good collection of *bons-mots* of the previous half-century with those appearing now, there is no disparagement of contemporary wit possible. Nor does the caricaturist's pencil lose its point. It is not so coarse as it was; but its tracings are quite as poignant to folly, sham, and pretence. The improved manners of the time are as marked in humorous literature and illustration as they are in other things; and this greater geniality is positive evidence that mankind is more wisely happy than it was. The greatest proof that amusement is desired, lies in the immense success that many of the comic periodicals have attained.

Humour partakes of the idiosyncrasy of the period, like other matters. We cannot find the fun which lay under the noses of our fathers. It has gone with the objects that produced it. The rollicking scenes of *Tom Jones* and *Roderick Random* have gone with the turbulent, sensual, and ignorant people who lived amid them. Squire Western has not a representative in the most stationary of the shires. Our fox-hunters are like men of another species. No surgeon's

mate could possibly meet with the adventures of Roderick, in our ironclads; nor is there probability of the existence of another Midshipman Easy, on board any ship in the fleet. Those who complain that Dickens has no successors, must address their grievance to history, which refuses to allow two epochs to be alike. Pickwick, the Wellers, and other worthies, belong to the age when steam was not. The amazing outbursts of enterprise which followed the invention of railways, flooded 'society' with a host of humbly-born plutocrats, whose financial dominion excited the wrath and the cynical jocularities of the privileged. But the *nouveaux riches* have multiplied to such a marvellous extent that to ridicule them would be absurd. The 'caste' spirit has evaporated to an immense extent; so that a speculative 'Jaumes,' instead of being despised for seeking to rise out of a menial to a higher position, is applauded. First Lords have abolished the ruffians and tyrants who caused the woes, comic and tragic, of Marryat's heroes; and commiseration has done much to annihilate the picturesque squalor in which Lever's grotesque peasants fooled and fretted away their lives. Our recent humorists have been social reformers, the most searching and effective of all that extraordinary legion of humanitarians which have made the nineteenth century so different from its predecessors.

Education, and the interfusion of town and country folks are fast erasing the quaint rurals whose psychological peculiarities were so wonderfully reproduced by George Eliot. Uncouth speech and archaic phraseology will erewhile be as rare in the village as in the city. Science is gradually destroying the superstitions which maintained romance in the country long after it had perished in the town.

As civilisation goes on reducing all classes to intellectual uniformity, amusements will necessarily change. But they will not fail. The appearance of a new school of humorists in America is evidence that laughter and smiles are not becoming obsolete. Preoccupied by the cyclopean labours of converting the wilderness into infinite cities, and eager for wealth beyond all other people, the Americans find time to enjoy the drolleries arising from the very gravity of their pursuits, and from the odd incidents arising out of the blending of many races into one people. German ponderosity and Hibernian flightiness are producing a novel sort of literature, as the two races mingle, and promise mankind incalculable entertainment when the American *genus homo* becomes more distinctive.

Considering the incessant activity of the time, the large demands made by science upon the attention of all but the lowest classes, and the serious problems arising from the profoundly modified condition of society, it would not be wonderful if fun and frolic were wholly eclipsed. We cannot be in two places at the same time; nor can we be under the influence of two moods. Joyousness depends upon favourable conditions, upon good health and kindly relations with men and things. When we find, therefore, that in spite of the rush and roar prevailing everywhere, in spite of remorseless egotisms, and of the endemic 'malady of thought,' that laughter innocent and hearty still ripples over the grim

ocean in which we swirl, we may well take courage, and believe that amusement is as much the appanage of man as labour.

But we also are legatees of the toils and tribulations of those who did in their day what we are doing now. The peace and security in which we live had to be fought for; the thousand instruments for winning food which cost us no invention, had to be pondered out by our fathers. We possess all the gains of the infinite labourers of the past, and among them the treasures of humour contained in the literatures of all peoples. Our sources of amusement are indeed inexhaustible, and our leisure abundant compared with that of former times. It is admitted that human nature is capable of indefinite improvement, and that our faculties expand with their exercise. Hence it follows that the joyous susceptibilities of our species may be expected to develop with the rest. And such we find to be the case. The higher races have the sense of humour much more acute than the lower. Savages rarely laugh. The incidents of their lives have little in them that is comical. Semi-civilised Mongolians cannot comprehend the frolicsome gaiety of the Western world. The Japanese are truly a merry race, but resemble our children rather than our youths in their amusements. Among ourselves, too, the modes and sources of humour are higher than they were. Obscenity and profanity do not evoke the laughter of our rustics, as they did even a few years ago. Idiots and mental weaklings do not furnish butts for rude jokers now. The base and the malignant may still find a ferocious pleasure in scoffing at the deformed and the odd-tempered; but the sympathies of the people are with the sufferers. Ill-natured wit is less relished than at any previous time; cruel amusements are ever growing wider asunder.

Amusements, like other things, are less violent than they were; people can enjoy fun without the strident roars of noisier times. It is not Laughter holding both his sides that relishes 'a good thing' most. We can digest a joke without any more symptoms of the process than a smile; and yet the assimilation of it into our mental being will be more complete than if we had gone through muscular paroxysms in 'getting it in.' No people enjoy the absurd more than the Americans; still they laugh less than the English. It is indeed possible to be merry in a quiet way, and that we are becoming. Our merriment is of a temperate kind, and therefore will last longer than the furious pleasures of earlier times.

A TRUE STORY OF THE OLD COACHING-DAYS.

MANY years ago, when a journey from Edinburgh to London was a matter of days instead of hours, I started to make it, for the first time in my life, in the stagecoach which I shall call the *Royal William*. I was travelling alone, inasmuch as I knew none of the other passengers; but the guard had been 'tipped' to look after me, and he did that as well and for as long as he could. It was about ten days before Christmas. I was going to pay my first visit to London, having left school 'for good' some months before. The prospect of the journey had been scarcely less delightful than that of London itself, and tedious

as it would be thought in these luxurious days, even by healthy young people such as I then was, I enjoyed it thoroughly—at least until more than half of it was over. There was snow in the air, but none on the ground, and our four 'spanking' horses took us along at ten miles an hour, including the stoppages.

All went well until we got to Yorkshire. We had for some hours been going through a snow-covered region, and our pace had consequently been somewhat diminished; but when we reached the wild moors of Yorkshire, the snow came down in blinding clouds, and darkness setting in, we lost our way. Between the drift and the darkness—for it was about five o'clock in the afternoon—we had managed to get off the high-road, and only discovered our mistake when, after much plunging and struggling on the part of the horses, and coaxing and swearing on that of the driver and guard, all of which was more exciting than agreeable, the wheels stuck fast in the snow, and the exhausted animals absolutely refused to go a step farther.

Where we were, we could not tell—it was even a matter of doubt if we were on a road at all. We could just dimly see the white moorland stretching away on every side. There were neither stars nor moon, and the pale rays from the coach-lamps, which shone coldly on the snow, extended no farther than the leaders' heads.

One passenger proposed that we should all crowd together inside the coach, then—necessity having no law—feast upon any edibles that happened to be in it, and finally try to sleep till morning. But, for several reasons, few of us cared for that plan, without first making another effort to get back to the high-road; so the guard took his horn, and two gentlemen a lantern, and they went off together to reconnoitre. In ten minutes they came back to say that they could not make anything of the situation; but that they had seen the lights of a house down in a hollow not far off, and were of the opinion that it would be better for us to try to reach it, rather than remain where we were all night. We all got out of the coach and started for the house, leaving guard and coachman behind, but promising to send them assistance when we reached our destination. The two gentlemen with the lantern guided us; and in about a quarter of an hour we reached the lodge-gates, after much parleying whereat, we were at length allowed to proceed to the house itself.

We were not astonished that the porter had been so unwilling to admit us when we discovered, as we soon did, that the house was already full of Christmas guests, most if not all of whom would be remaining over the night; for in the country in those days, flying visits were more or less impracticable in winter, and this was one of those isolated dwellings whose inmates might be kept prisoners for weeks at a time. But notwithstanding their crowd of guests, the master and mistress—whom I shall call Williams—received us very kindly, warmed us, fed us, and immediately sent off two of their own men-servants to assist the guard and driver to bring the horses to their stables.

Never were belated travellers more fortunate! Such an inundation of strangers must have been a serious inconvenience in a house already so full

of people; but Mr and Mrs Williams made us all at once feel at ease, and were very much distressed that they could only find sleeping accommodation for the ladies of our party; beds would be made up in the barns for the gentlemen, however, 'which would not,' they hoped, 'be found very uncomfortable.' The gentlemen of course were delighted with the idea, and declared their willingness to sleep anywhere—as 'indeed we ladies had also done.

So the evening passed on; and a very pleasant evening it was, with music and dancing—those dear old country-dances that one never sees nowadays, when old ladies and old gentlemen danced together and looked dignified, or heartily merry, and sometimes graceful. 'Also, it added greatly to my enjoyment when I discovered in the course of the evening that Mr and Mrs Williams were old and warm friends of my own father and mother. Although I had never before seen them, I had heard them spoken of by my parents, who would be delighted when they got news of their old friends in so unexpected a way. In these days of railway trains and penny-posts, one need never lose sight of one's friends; but things were different then, and I knew that my father and mother were not even aware whether the Williamses were still in this world.

The gentlemen passengers retired about eleven o'clock; but the rest of us sat chatting for nearly another hour. During this time, some remarks I accidentally overheard led me to the conclusion that we ladies were just one too many for the sleeping accommodation of the house, which was not a very large one, and that Mr Williams himself intended to go and sleep in a small cottage that had once been the bailiff's, but was now unoccupied. To turn our host out of his own house, seemed really barbarous, so I entreated him to let me go instead. At first he laughed at the idea as ridiculous; but when I showed him that I was in earnest, was not the least afraid, and indeed rather enjoyed the idea of such a finish up to an adventurous day, he gave in.

When all the other guests had retired, my new friends kept me a little longer at the drawing-room fire talking about my father and mother; then Mrs Williams wrapped me up and went to the hall-door with me. There I bade her good-night; and Mr Williams, with a lantern in his hand, led the way to the cottage, which stood about a hundred yards from the house, and consisted of two rooms opening into one another. Servants had been sent to prepare the place; and with bright fires in both rooms, it looked very snug; the occupants of the barns, I thought, might be less lonely, but could not be more comfortable. The rooms were very bare; but they were clean enough to all appearance, and there in the inner one lay my bed, white and inviting. There was a chair, and a washing-stand, and a small table with a looking-glass and four lighted candles on it. Candles were lit also in the other room; and my host advised me to keep them burning through the night, so that, should I awake, I might not find myself in the dark. A further supply lay on the table.

'Now,' said Mr Williams, when we had taken a look round, 'shall I not stay, and let you

go back to the house? I am sure it would be better—in fact, the only proper thing to do.'

But I would not recant, and declared that I did not anticipate things could have been made so comfortable; at which Mr Williams laughed, and, seeing that I was obdurate, yielded.

'Shall I lock you, in, then, or will you keep the key yourself?' he asked.

'Lock me in, please; it sounds more secure,' I replied.

'Ah,' he said with a smile, shaking his head at the last part of my answer, and looking ready to begin the argument all over again. 'But since you will be obstinate, I will come and let you out at half-past seven.' So saying, he bade me a kindly good-night, and went out, locking the door behind him.

The door between the two rooms stood open, the fire crackled cheerily, and the candles burned brightly. On the table stood a bag, which Mrs Williams had told me contained everything necessary to my comfort.

I undressed a little, took down my hair, and began to brush it. Suddenly I was startled by a peculiar sound, seemingly quite close to me. It was a gentle clink-clink, like a chain rattling. I held my brush suspended, and listened. Pooh! What a white face was that in the glass! It must be some dog kennelled near, and Mr Williams had not thought of telling me of it. Yet I could have declared that the sound was in the cottage—in the room where I was, even! But that of course was impossible. I drew a breath, very gently, and went on brushing my hair.

There!—it came again—clink-clank—this time louder than before, and seemingly so near my back, that I looked over my shoulder almost expecting to see something. But there was nothing visible. I turned my eyes to the other room. Nothing there either, that I could see; the candles' shadows, but no other—shadows. It was nonsense to tell myself that 'it might be imagination,' for I knew it was not. I wished that I had eyes in every part of my body, especially in my back, and I began to regret that I had willed to be a prisoner, instead of keeping the power of escape in my own hands.

All was quiet again, except that I almost fancied I heard the sound of breathing. Was it possible, I wondered, that I could hear the breathing of any creature outside the cottage? Impossible, surely; *this* must be imagination; it would be myself breathing! And when people were feeling nervous—I meant frightened—their senses were not always to be depended upon!

With these reflections, I tried to shake off my fears, and went on brushing my hair. But I had never noticed before what a noisy operation this was, my boots creaked so loudly at every motion. I made haste with as little noise as possible, twisted it up, and was ready to go into bed, when the sound came again—clink-clink-clank, quite distinctly. It startled me fearfully this time. I had really, I believe, been half-hoping that it *was* imagination; but there was no doubt now. Where the sounds came from, I could not before exactly tell; now, however, I felt certain that the cause of them was not farther off than against the outside of the cottage wall behind my bed. It might be a dog; but I could

not help feeling as afraid as if it were something very different.

I got into bed. Once warmly covered up, I did feel a little more secure; but my heart still kept thumping, and instead of trying to sleep, I strained my eyes to their widest, that they might take in every corner of the place at once. Some minutes passed, and I heard no sound but a coal gently sinking, and the breathing that must be my own—or imagination—then, suddenly, clink-clank, clink-clank, loud and fast, and the next moment a man crept slowly out from under my bed!

Now, indeed, my heart leaped into my mouth! Paralysed with terror, I just lay and gazed at him. He crept along the floor towards the fire, clanking as he went; then he stood up—a tall, slightly-made, youngish man, with a dark fierce face and brilliant eyes—and leaning forward, with his back to me, he spread out his hands to the blaze; awful hands to look at; long and thin and cruel-looking—like the claws of some monster, they seemed to me; and chains hung round each wrist, rattling slightly and glittering in the fire-light, as his eyes did also.

For some moments I lay and gazed at him, scarcely breathing, expecting every instant that he would turn his head and see me. He did not; but of course I dared not stay there. Yet I seemed spellbound to the spot; and it was with a great effort of will, but without any definite idea what to do, that I managed one desperate move. I slipped out of bed, and, with my eyes fixed on the man, glided swiftly to the door, into the other room, and into the corner that was most in the shade. Had he but turned his head half an inch as I passed, he must have seen me; but he kept his eyes on the fire with an awfully hungry look—and perhaps my motions were as noiseless as I wished them to be. Once I was into the corner, he could not see me without coming into the room. But he might do that any moment; and then? I stood still and rigid, listening. I could not now see him. A long long time it seemed that he stood in the same position, then the chains clanked loudly, and I heard him walking across the floor.

He must be coming now! I thought I would have died that moment. My heart seemed to stand still. But he did not come; he had gone towards the bed, for presently I heard it creak as he lay down on the top of it. Then, after some restless moving about and rattling of the chains, all was still. I could not tell whether he had fallen asleep or not; for I dared not move, lest he should be awake. There was nothing that I could sit on, and there I had to stand with my bare feet on the uncarpeted wooden floor, with no covering but my night-dress. It was fearfully cold. If only I had had some clothes on, I thought I should not have been quite so defenceless! Then horrible thoughts came and tortured me. Perhaps the man knew I was there quite well, though he might have been asleep at first, and was just keeping me in suspense till it was his pleasure to come and pounce on me with those awful chains and claw-like hands of his.

A long time passed in this way, and then once more my heart leaped into my mouth. I heard the man get up, walk to the fire, and put on some coals. He stood there a minute, then

walked to the table, which was exactly opposite my door, but not within range of my sight, snuffed each candle, paused again a full minute, hesitating, perhaps, then walked back to the bed and lay down.

Suspense is a terrible thing; and the cold was becoming every moment more intense. Sometimes my knees bent under me, and I slid down almost to the ground; then, alarmed to find myself in so unguarded a position, I would start up again, and try to stand straight and alert—as if my poor readiness would be of any avail when things came to the worst!

So the long hours passed. The man did not get up again, and I thought he must be asleep, for when at length the fire and the candles in both rooms went out almost simultaneously, he took no notice of it, but left us in darkness. For some hours it was a darkness that might be felt; but it did not add much to my terror, for it made me feel a little safer and farther away from him.

All this passed in what seemed years instead of hours; till at last my heart gave a great bound of hope, for there, through the window, which had neither blind nor shutter, I could see lights moving about over the snow in different directions. Then all the lights came together to the door, and some one tried to open it. Alas! it was locked and the key gone, as I knew. So, after another futile attempt to open it, the lights all moved slowly away. I was afraid to go forward to the window, lest the man should see me and the torch-bearers should not; I only moved along the wall so as to be opposite to it, and waved both hands in a silent frenzy. No one saw me, and soon all the lights had quite disappeared. This disappointment almost deprived me of all the strength I had left; but I was too thoroughly terrified to faint. I was in no hurry for any such luxury, and now every moment expected that the man, roused by the noise at the door, would get up and come into my room to examine it. However, time passed on, and he did not move, only now and then the chains rattled a little, as if he were turning in his sleep.

At last the total darkness began to give way; a faint grayness came stealing through the little window. The night was *not* going to last for ever! Slowly the grayness grew towards light, very slowly but unceasingly, and I could dimly see every object in the room—when at last I heard footsteps outside, then the key put in the lock, and—oh, how slowly!—turned. It was my deliverer.

All the terror of the past night and the joy of the present moment seemed now suddenly crushed together and pressed upon my head. I was mad for the time, I suppose. I waited till the door was open, then fled out into the snow. 'Don't go in there!' I said in a whisper like a shriek. 'Lock the door!'

'Good heavens!' Mr Williams exclaimed, obeying—and then he caught me up in his arms.—My hair had turned quite white.

But I did not discover that till many months afterwards, for, being ill, I had no need of a looking-glass. I learned then, too, for the first time, that my fellow-prisoner was a madman, who had escaped from an asylum some miles off.

Perishing with cold, he had crept into the cottage after the servants—who had left the key in the door—had finished their preparations, and so had not been discovered. He was a dangerous lunatic; so it was as well that I did not know that, for a madman is a greater terror to me than the most desperate of escaped convicts. The men with the torches had come in search of him.

Mr Williams ran with me to the house, and sent three men to the cottage. They were no more than in time, as the wretched man was escaping from one of the windows just as they came up, and they had a severe struggle with him before he was overpowered. The same morning he was restored to the asylum, where he died a few weeks afterwards, worn out with an access of madness.

Ever since that time I have lived in dread of going mad. Indeed, I do not think I am always quite so sane as other people. But I am an old woman now, and I think I shall be spared worse madness. I have written this in the hope of easing my mind a little; though I can never forget that night.

THE SEAMY SIDE OF HUMAN NATURE.

FROM a Return of Judicial Statistics for the year 1881, issued by the Home Secretary, it appears that there are no fewer than seventy-one thousand six hundred and thirty-seven known thieves and depredators in England and Wales. Of these, however, only thirty-nine thousand one hundred and sixty-one are in a position to carry on active operations, the rest being in convict or local prisons. These criminals are worse than drones in the social hive. They are the Ishmaelites of society, preying upon honest people when out of prison, and supported at the public expense when in. Without reckoning the value of property stolen and not recovered during the year, we find that the cost of police and prisons in 1881 in England and Wales was nearly four millions sterling, which has to be defrayed either by direct or indirect taxation.

The halcyon days of thieving—when bands of stout fellows lived a bold and free life under the greenwood tree, and balanced the despoiling of a fat abbot by the succouring of a distressed widow; or when bold moss-troopers, Scotts or Percies or Douglasses, conducted a doughty Border raid—are for ever gone. The average thief nowadays is a very mean-spirited creature indeed. Though he has plenty of low cunning, he is not a many-sided man. He generally has but one particular 'lay,' and after serving a term of imprisonment, returns to his old haunts and habits. A 'cracksman' or housebreaker does not commit paltry shop-door thefts, while a pickpocket seldom figures in a charge of robbery by violence. Some thieves are notorious for thefts from children. Others have their peculiar vocation in snatching greatcoats from unguarded lobbies, or appropriating stray door-mats. The detective knows this, and conducts his inquiries accordingly. This officer is the abhorrence of the professional thief. The uniformed constable can be watched as he lounges leisurely along; but the detective working silently in plain clothes, often pounces on the thief when least expected.

The popular delusion that a detective was an almost supernatural being who could find out dark and mysterious crimes as if by magic, and who always turned up in the nick of time, has now nearly gone. By a fortunate chance, an officer may occasionally stumble on the thing he is looking for; but success is generally the result of patient, laborious, and often disagreeable or dangerous work. He must be cool and wary, for he has to deal with all sorts of persons. While apparently noticing nothing, he examines everything with an observant eye. Much of the information given him is utterly worthless, some of it being purposely calculated to mislead; but from such he often draws conclusions of the very opposite character to those intended by the informer. Local knowledge, and a thorough understanding of the nature and habits of each criminal in his district, are of the greatest assistance to a detective officer.

In a number of cases, however, common-sense is the best safeguard of the public against imposition. Some swindles are of such a nature that the victims choose rather to pocket their chagrin and suffer the loss in silence, than be dragged into a court to give evidence, or have their names appear in the public prints. We shall briefly describe some of these swindles, as, notwithstanding the warnings so often given in the newspapers, the imposition still goes on, and complaints by victims of the first two species have lately come under our notice.

There is the swindling Loan Company, with its commodious chambers in a good locality, and a large brass plate on the door. A speciously worded advertisement informs the needy that money on personal security can be borrowed at a moderate rate of interest. There is a delightful haziness about the paragraph, suggestive of long credit and a disinterested and philanthropic lender. The embarrassed tradesman or struggling young professional man, ashamed to let his friends know how the shoe pinches him, thinks this is the thing for him, and writes for particulars. He receives a circular showing the Company's terms, and containing a list of questions to be answered, and also containing a demand for an advance fee, varying in amount from half a guinea to two guineas. If sent, the advance fee is invariably retained; while in many cases a curt intimation is sent that the Company decline to entertain the application. When a loan is granted, a high rate of interest is charged, and the first year's interest is deducted from the loan; while the borrower is obliged to grant a bond over his house, furniture, or stock-in-trade. On these, if there is the slightest failure in giving them their pound of flesh, the Company generally foreclose at the most inconvenient time for the borrower. If a man's business is in such a state that a temporary loan can help him, and his character is good, he will seldom be at a loss for somebody who knows him to give him a friendly lift. If this is not the case, it is far better that he should give up the business, pocket his pride, and start journeyman again, than, by getting into the hands of harpies, ruin his prospects for life.

There are various mock-auctions in every large town. A decoy at the door invites the unwary passenger to walk in, as the sale, or,

as he unconsciously informs you, the 'sell,' is just going on. When an outsider does go in, a number of confederates, got up in various characters—from the clergyman in rusty black, to the countrywoman with her basket on her arm—carry on the sale briskly, and articles are rapidly sold at very low prices. If the visitor is not wary and sensible, he is sure to bid, and may possibly find himself, before he leaves, the purchaser of an antiquated old sofa, a set of rickety chairs, or a Brummagem dinner service, at double their value.

Another dodge is generally tried on retired military or naval officers. The swindler sends a letter recalling some reminiscence of mutual service in an army corps, or on board a man-of-war, a number of years ago. He mentions his vivid recollection of these happy days, and hints that he has not been over-fortunate in worldly affairs. He has been security for a friend, who has failed to meet the bill which he himself has had to pay. The last instalment is nearly due, and he is still eight or ten pounds short, while the consequences will be serious if the money is not forthcoming. Can he presume so far upon the memory of old times as to ask a small loan to tide him over the difficulty? This type of swindler possesses more than an average education, and his information regarding the antecedents of his intended dupe is curiously accurate. It is probably gathered from some old tar or discharged soldier, many of whom are extremely garrulous regarding their favourite officers or old masters.

An ingenious fraud has lately been practised in London. A tall well-dressed man, apparently a City merchant on his way home from business, is seen talking on the street to a man in workman's dress who carries a basket and some tools. The 'merchant' accosts some well-dressed passenger, and tells him the 'mechanic's' tale of want of employment and family distress. He adds that he has satisfied himself of the truth of the story, and is about to give a trifle; will the gentleman join in giving a small sum to relieve deserving necessity? The apparent respectability of the voucher often succeeds where a common begging petition would fail, and the person accosted generally gives something. A gentleman who had given a small sum saw both swindlers issue in company from a public-house some time after. Of course, on seeing him they decamped.

A clever dodge has lately come to light, which shows how thoroughly the swindler understood those on whom he was to operate, and forms a curious commentary on the relations between servants and tradesmen. A man having the appearance of a gentleman's servant called on several tradesmen in a fashionable part of London, asking them to come to a certain house for orders for different classes of goods, at the same time throwing out a suggestion that a small gratuity for himself would be acceptable, and might not be lost by the tradesman in a distribution of further orders. In a number of instances, small sums were given; but when the shopmen attended at the place named, they found their services were not required, and that the small fees had flowed into the pocket of some clever rascal.

Swindling, though extremely annoying to the victim, often presents a comical side to the

onlooker. That our Yankee cousins are go-ahead in their rascality, as in all else, the following story will show. We all know the usefulness of an ulster in covering a rusty coat or a ragged pair of trousers, but few would have the ingenuity to make the ulster the means of supplying food, raiment, and money. A clever rogue having equipped himself in a large ulster of fashionable make, and provided himself with the indispensable handbag, entered a Chicago hotel pretty late at night. Mentioning that he had just arrived in the city, and was to leave early next morning for New York, he took a room for the night and went to bed. Early next morning, the new guest's bell was rung violently. The servant who answered it found him highly excited. His room, he said, had been entered during the night, and his only pair of trousers, containing his purse, fifteen and a quarter dollars, and a through-ticket for New York, had been stolen. The landlord was called up. The guest stamped on the floor, and used language anything but canonical. What could the landlord do? It would be in the highest degree unfortunate if his house got the reputation of being conducted in such a way that a man's trousers were not safe in his bedroom. What he and nearly a dozen subsequent landlords did was to provide a pair of new trousers, replace or lend the missing dollars—the guest did not care which—buy a ticket for some place or other, apologise, and decline payment for entertainment provided. Plying his lucrative game in various localities, the happy inventor had crelong plenty of dollars, many pairs of trousers, and railway tickets in every direction. But one landlord who had heard confidentially about the missing trousers from a puzzled brother in trade, angrily declared that his guest had brought no trousers with him, and instead of apologising and supplying money and pants, he coated his lodger's nether limbs with tar and feathers and turned him out in that condition.

Another specimen is too good to be willingly lost, for in this case the rogue was more actuated by a 'plaguy drouth' than by any criminal intent. Several 'Paisley bodies' had had a prolonged drinking-bout. Their money was done, and their credit exhausted, for the host had trusted as far as he dared; but their throats were as dry as ever. A shilling had been screwed by one out of an unwilling acquaintance; but alas! it would not go far among the lot. A bright idea struck one of the party. 'Give it to me,' said he, 'and I will double it.' It was accordingly handed over; and the 'crony' forthwith repaired to the nearest pawnshop and offered the shilling in pledge. 'Mine uncle' grinned, and thinking it some drunken wager, he laughingly offered tenpence. This was immediately accepted, and a pawn-ticket given, marked, at the pledger's request, 'A piece of silver-plate.' The pledger now returned to the public-house. His companions were at first rather dubious of the wisdom of his procedure, but were soon undeceived. He ordered some ale, and while paying the landlord, remarked to his companions on the shabbiness of the pawnbroker. The words 'Piece of plate' made the host prick up his ears. He made some inquiry, was shown the pawn-ticket, and told that an old heirloom had been sacrificed. The

innkeeper knew they were no thieves; and the upshot was that he purchased the ticket for another shilling's-worth of ale, to be immediately supplied. The rascals had the ale consumed and were off, before the publican, going to lift his 'plate' from pawn, found he had been bit.

Time and space would fail us to mention the various swindles in the shape of sham agencies, foreign lotteries, and deceptive advertisements of all kinds that are continually being forced on the notice of a gullible public. If the ingenuity now being wasted by rogues in cheating people were employed in some useful occupation, it could hardly fail of being successful; and the most likely way to induce them to take an honest course is by the public turning a deaf ear to the voice of the charmer and refusing to be imposed on.

NOTES ON CONTINENTAL TRAVEL.

IN TWO PARTS.—PART II.

We quitted the *Point du Jour* with a pleasant impression of our brief sojourn at Montbard. The next day's halt was at Sens; and now our journey was drawing to a close, and we expected to reach Paris at night. Before doing so, however, we were destined to a second adventure. Some of our party not having seen the palace at Fontainebleau, it was arranged that we should make a detour and visit it on our way. When, late in the afternoon we reached the place, we found the whole town on the alert. The king (Louis-Philippe) was expected. He was coming, accompanied by the whole court; so that to see the palace was out of the question. 'And your reaching Paris to-night,' added the innkeeper, 'is equally impossible. Every horse on the road has been engaged for His Majesty, who always travels with a large retinue. I have excellent accommodation at your service, a well-served cuisine, the best beds. Fontainebleau is a charming sojourn, and'—

The entrance of the postillion cut short our host's loquacity. He confirmed the statement of the latter as to the improbability of being able to get horses; but added, that if we were willing to take chance and go on another *poste*, his horses would be rested and refreshed in a couple of hours, and could take us on. We accepted his offer, despite the remonstrances and grumbings of the landlord, and having ordered dinner, sallied out for a ramble while it was in preparation.

At the end of the next stage, some diligence horses were fortunately to be had; but on reaching Penthievre, we came to a full stop; not a quadruped was procurable for love or money. The entire population of the little town was in the street, eagerly looking out for the royal cortège, which was every moment expected to pass through. We had nothing for it but to await patiently that event, and then remain until some of the horses which had brought Louis-Philippe were sufficiently rested to proceed with us. The posthouse was a miserable-looking place, dirty and uninviting, so that the ladies of the party preferred staying in the carriage; the maid following the example of her mistresses, and

remaining in her seat on the rumble behind, a proceeding which, as we shall see, nearly cost her her life.

Nothing could be more amusing than the scene around us. A French crowd is always entertaining, but this was especially so, from the state of intense excitement of every man, woman, and child. Young and old, all were talking, gesticulating, giving their opinion, laying down the law. The king was of course the grand topic, the absorbing object of interest. How soon he would probably arrive, where he was at that precise moment, the conjectured number of his carriages, the incidents and reminiscences of former passings-through—all were debated, canvassed, commented on, with nods, shrugs, grimaces, and contortions such as a Frenchman alone is capable of. The postillions and their horses added not a little to the animation of the scene. The latter, which were all gray, without a single exception, were fastened up against a wall opposite the posthouse, to be in readiness at a moment's warning. They were fidgety animals, tossing their heads and pawing the ground with impatience.

The French postillion—an individual now almost extinct—was as peculiar and marked among his countrymen, and in appearance as different from them as the sturdy *poissardes* of Boulogne and Dieppe are unlike their sister citizens whose business is unconnected with deep waters. Tall, heavy, and strongly built, one would have imagined him ill calculated for his calling, and in a country, too, where diminutive men predominate. The huge French postillion was often gruff and taciturn—another contrast to the natives in general; given, too, to grumbling at the end of his stage; but that is, I believe, a characteristic of the driving fraternity all over the world. He was generally good-looking; and his costume—the glazed round hat with its smart cockade, blue jacket with crimson facings, yellow leather breeches, and enormous jack-boots—set off to advantage his stalwart figure.

We were drawn up quite close to the posthouse, to be out of the way when the cortège arrived, the pole of our carriage almost touching the wall of the building. Soon after taking up this position, a little old man with a basket of cakes on his arm came up to us and asked us to buy some. He was a lean, shrivelled, little creature, with a huge pair of earrings, and a brown face like a walnut. Very neat in his person; his linen jacket and apron, with the cloth that covered his basket, were as white as snow. We did not mind him at first, but he returned often to the charge.

'Buy my cakes, ladies,' he said; 'they are excellent. First quality flour, best of butter, and such sugar and fruit! Plenty of spice too, and no stint of eggs. They melt in the mouth. Poor Marie taught me to make them—Marie, you know! My little daughter makes them too; but I never allow her to come out and sell them. She is too young and too pretty; not so pretty, though, as Marie! Buy my cakes, my excellent cakes.'

To please the poor little man, and get rid of his importunities, we invested in some of his manufactures. They did not quite come up to his description of them, but were highly appreciated by the children to whom they were

distributed when his back was turned. He continued to patronise us, and to hover round the carriage, coming back from time to time with tidings and conjectures about the great event in expectation. There was something very peculiar in his look—a wild unsettled gleam in his eyes, and his movements were restless and abrupt. He talked perpetually, running on in a rambling incoherent way, often to himself when no one was paying attention to him. A woman who had seen him talking to us, shook her head, and said: 'Ah, poor little Jeannot! there he goes with his cakes. A worthy creature; but all wrong here, you understand,' she added, tapping her forehead; 'he was never the same since he lost his wife.'

The subject of her remarks returning to us at this moment, prevented our asking any questions. He was soon on his old theme, 'poor Marie.' It was not difficult to draw his little story from him; he told it unconnectedly, by fits and starts, and may be thus translated:

'Marie was very pretty, and she was good, too—the best girl in the village. We loved each other from childhood, ah, how dearly! and we always settled to be married some day. Marie's father and mother gave their consent on condition that we should have between us a certain sum beforehand to begin our little *ménage*. We were too happy at the prospect of being united to mind any conditions, however hard; so we set to work both of us to try and increase our little store. It was no easy task. I had an old blind mother to support out of my earnings; and though Marie made cakes, and had such a winning way with her that she sold twice as much as any one else, still the purse filled slowly. Time went on, however, and we met with various pieces of good fortune. My Marie was so industrious and so clever; everything prospered with her, and with me, for her sake. We grew rich at last, so rich that the sum was nearly made up. How happy we were! and twice as fond of each other as ever. But before the year was out, ah, what a blow came! The conscription took place—I was drawn for a soldier!

'What is to become of us now, Marie?' I cried. 'We are lost!'

'She threw her arms round my neck, and wept as if her heart would break. Then suddenly starting up, she ran into her own little room, and bringing out her purse, pressed it into my hand. "There," she sobbed; "take that, Jeannot. You have more; we can buy a substitute."

'But our marriage—our marriage, Marie!' and I wrung my hands in despair.

'Well, *mon ami*, it must only be put off. We must go to work again and get more money. We are both so young, Jeannot, so very young!'

'There was no help for it. I was bought off. It took more than half our funds; and I was very down-hearted at having to begin afresh. Marie had much more courage. The year passed on, and brought joy at its close. An old uncle, a grocer at Dijon, died and left me a small legacy. Marie became mine.

'What a nice cottage we had, and how prettily it was furnished! How proud I was of my little wife, my own darling Marie! She was so good to my poor blind mother, who lived with us, and loved her dearly. Every morning she took out

her cakes to sell, and customers increased fast. Soon, however, she began to stay more at home, and instead of her pastry, she used to work at tiny caps and pinafores; and when strangers came in, she hid them away shyly and blushed like a rose. I sold wood, which I bought *en gros* round the country; and it was a profitable trade. Ah, how happy we were!

'There was a great sale of trees in a forest beyond Fontainebleau, and I started off to attend it and get bargains. I promised my dear little wife to be back in a few days. She did not like me to be long away from her just then; and as for me, I could not bear to have her out of my sight. I had only been two days at the place, when they came to tell me that a boy from Penthievre had come and wanted to see me. I flew to meet him.

"Joy, joy!" he exclaimed; "you have a charming little daughter!"

"And Marie?" I cried.

"She sent me off to tell you the news and to beg you would not delay your return."

'Delay indeed! The leagues seemed to lengthen before me on my road back, so great was my impatience to get home. At last I reached my own door. I pushed it open; I pressed on towards Marie's room, when a woman came out against me.

"Stop!" she said; "I have brought you the infant. Won't you look at your child?"

"Ah, it is a nice little thing," I said, kissing it; "but I want to see Marie. Let me pass."

"No, no—not yet. Wait a minute, there's a good man. She can't see you just now; she can't indeed."

"Not see her own Jeannot?"

"No, I tell you.—Don't push by me; you will disturb her. She is not so well—she is asleep—she!"

'I freed myself, and rushed in. O mon Dieu! Marie!—that marble face—the flowers—those white draperies—the crucifix on her breast—the crowds in the room—my old blind mother sobbing at the bedside, her apron thrown over her face—what did it all mean? Marie, Marie! won't you speak to me? Cold—silent—still! My head turned round, my sight swam; I ran out of the house!—

'Father!' cried a young girl from the crowd, running up to the little cakeman and pulling him by the sleeve, 'the king is coming! See, every one is preparing. They are getting out the horses. Come away, come away!'

There was indeed a great stir. The people, chattering, clamouring, and jostling, separated to the right and left to leave a free passage. The postillions pulled off their blouses, and gave a hasty glance over their finery. But no one came; it was a false alarm.

Another tedious hour passed away. It grew very cold, and so dark that the poor little cakeman's white garments could no longer be distinguished from the dusky mass as he flitted restlessly about. At length a distant sound was heard. It grew louder. 'Le roi! le roi!' passed in hoarse, awed murmurs from mouth to mouth. A sudden silence fell upon the crowd. The king's courier galloped up, and in an instant all was ready, the horses out, the postillions at their posts.

Another moment, and the long train of carriages came dashing in at full gallop—royalty always travels fast. The halt was of short duration. In less time than I have taken to describe it, the horses were changed, the lamps lit all along the line of carriages, flashing up one after another into sudden brilliancy; and the glittering cortege continued its rapid progress.

From the carriage window we looked after the dazzling cavalcade, and watched it disappearing into the darkness. Suddenly a thundering sound was heard approaching; and then came a violent crash. Our carriage was dashed forwards against the posthouse—the pole and forepart shattered by the concussion. There was a noise behind of furious struggling and plunging of horses—a feeling as if the rumble and roof of the vehicle were coming crashing in over our heads—a confusion of shrieks, oaths, and exclamations outside; while high over all the din, the piercing screams of our luckless abigail sounded in our ears.

Stunned and utterly bewildered, it was some minutes before we could make out what had happened. The first object that met our eyes on recovering from the shock was our poor maid being carried into the posthouse.

'Be calm, Mesdames,' exclaimed the voice of little Jeannot, who was foremost of a sympathising crowd gathered round us; 'she is not hurt, heaven be praised! only very much frightened. One of the horses is dead. Look at him, poor beast, lying stretched behind your carriage. *Ciel!* how he plunged. If Mademoiselle had not climbed up on the roof, it would have been all over with her. The driver is terribly injured. They have taken him into the house, only just alive.'

It now appeared that at the moment the royal cavalcade left Penthievre, the carriage of the Duc de Beauvon was proceeding from his château in the neighbourhood, along the road to the town, with the lamps unlit. The mania for English horses was just then at its height among the young French nobility; and the week before, the Duc de Beauvon had purchased a pair of magnificent English thoroughbreds for I know not how many thousand francs. These spirited animals were now drawing the carriage, which was luckily empty. The king's courier, who was galloping considerably in front, came in the darkness into collision with the horses. They took fright; and when the train of carriages, glittering with lights and going full speed, passed them, became unmanageable, and set off at a furious pace. They followed madly along until they dashed up against our devoted carriage. The shock may be imagined! The rumble was flattened in; one of the Duke's horses, a splendid gray, striking his head with violence against the iron and fracturing his skull. The poor animal in his dying struggles leaped so high that had not the maid, with great presence of mind, scrambled up on the roof, as Jeannot described, his forefeet would have surely struck her. As it was, her escape was almost miraculous.

The Duc de Beauvon was soon on the spot. He came attended by three or four English grooms, and their lamentations over the 'gallant gray' were grievous. As for us, we were soon surrounded by all the blacksmiths of Penthievre. After a noisy consultation, they decided that by their

united efforts it would be possible to patch up our dilapidated equipage so as to enable us to proceed on our journey.

Before leaving Penthievre, we learned that the Duke's coachman, though seriously hurt, was likely to recover. The courier who had been the innocent cause of the night's disaster was the man immortalised by the pencil of Horace Vernet. It was he who, having met with a mischance while on duty with the king, was bled by the hands of his royal master. The incident is the subject of a painting in the gallery at Versailles. On this occasion, fortunately, his horse was the only sufferer.

How different was the scene of our next rencontre with Louis-Philippe! In his own palace, the lordly Tuileries, radiant with lights, and brilliant with gorgeous uniforms and sparkling diamonds, it took place. It was the 'reception' night; and here, attended by his family and courtiers, His Majesty made the round of the salons, receiving the homage of the company, ranged along for the purpose of being presented; for, unlike the ceremonial at our own court, where the sovereign stands to receive the obeisance of those defiling before 'the presence,' here at the Tuileries it was royalty that moved, the subjects that remained stationary. Our party was at a short distance from the doors, and thus some little time elapsed before the royal personages reached us in their progress down the room. First came the king, his shrewd clever face beaming with frank good-nature; and after him the queen, tall and fragile, with silver hair and careworn looks. Then followed the handsome, graceful Duc d'Orleans, with his Duchess, full of German *bonhomie* and the sensible expression that atoned for lack of beauty. How serene she looked, that happy young wife, all unconscious of what was before her—of the day, so near, when Paris was convulsed to its centre by the tidings of the carriage accident in the Bois de Boulogne that made her a widow! Well it is for us all that the future is shrouded from our eyes; and how especially well for the family of Louis-Philippe that they could not foresee the trials and reverses that were in after years to come. The Duchesse de Nemours, Princesse Clementine, and the three brothers De Nemours, D'Annale, and Montpensier, came next. They were each attended by their households, and the same ceremony observed as in the case of the king and queen. Our names were asked by the lady or gentleman in waiting, who repeating it, presented us. All the royal family, except the Duc d'Orleans, spoke a few gracious words to each in succession as we were introduced. The Duke's aim just then was to gain popularity and to ingratiate himself with his countrymen, and with that view, his courtesies towards the English were scant. Louis-Philippe, on the contrary, treated them with marked attention.

Three days after the reception came our invitations to the court ball. A magnificent fête it was, and most conspicuous was the talent for producing effect, so peculiar to the French, in all its arrangements and decorations. The Countess of G—, one of the ladies of the bedchamber to our own Queen, was the chaperon of our party. She was at once recognised, and led up to the benches occupied by the foreign

ambassadors and the ladies-in-waiting of the French court, and thus we had the good fortune of being seated quite close to the royal family.

The supper-room that night looked like fairyland. It was the theatre of the palace fitted up for the purpose—the stage and pit being laid out with tables, and each box forming a little separate refreshment-room. Flowers, mirrors, statues, draperies, lights, ornaments—all were combined with exquisite effect; and what made the scene strange in our eyes was, that none but ladies were present. When the signal for supper was given, our cavaliers separated from their partners and drew back, forming a lane through which the many-coloured procession—a kaleidoscope of silks and satins and velvets, flowers and feathers and gleaming jewels—moved towards the theatre.

There the effect was curious; such an assemblage of womankind, the footmen, in their gorgeous state liveries, who waited upon the fair company, being the only individuals of the opposite sex to be seen. It was a new experience to find one's self on a festive occasion making one of such a congregation of ladies. We are used to the idea of bodies of men gathered together—at public dinners and the like; but an exclusively feminine assembly was certainly a novelty. Before leaving the fairy-like theatre, we turned to take a long look at it. The departing procession—those moving wreaths of figures of every hue and tint all branching off in different ways to gain the outlets to the doors—looked like the intricate mazes of some fantastic ballet.

When the tables were re-decked, the signal for the gentlemen's supper was given. Shortly after this, the royal party retired. Departures followed each other in due succession; and soon the brilliant Tuileries were left to silence and repose.

THE MARRIED WOMEN'S PROPERTY ACT (1882).

WHILE the attention of the public was taken up with the disturbances in Ireland and in Egypt, there was passed very quietly through both our legislative assemblies, in the ordinary session of 1882, an Act of Parliament which is destined to exert a considerable influence on the social and domestic life of this country. The short title of this Act is given above; its provisions will apply to all parts of the United Kingdom except Scotland, and it will come into force on the first of January 1883. Twenty or thirty years ago, such an Act would have been considered revolutionary; a man who had dared to advocate the views that will thus shortly become law would have been represented as a social firebrand, as an enemy to marriage, as throwing an apple of discord between husband and wife, as a disturber of the peace and the harmony of family life. Nothing of the kind, however, has occurred; Lord Selborne's Act has been accepted without any angry debate, and has been passed in a comparatively tranquil spirit.

The Married Women's Property Act (1882) is not a long or an unusually technical document; and seeing that it will affect half the families in the kingdom, we recommend the public

to buy the Act and study it for themselves. Excepting a few legal phrases here and there in the Act, the ordinary reader will be able to arrive at the meaning of this new law, which is a measure very much in favour of married women who have separate property. It does not give them power over the property of their husbands; but it does give them—what they have not had in this country before—absolute power over their own property. Under the new Act, a married woman with money (south of the Border) will be able to keep it, invest it, spend it, save it, and dispose of it by will, exactly the same as if she had remained single. Her husband will have no power to touch it or to interfere with it in any way; nor will his consent or signature in any case be necessary for its management or disposal. A wife who had consols standing in her own name before her marriage, will continue to hold them as her separate property, without settlements, and without the approval of her husband, just the same as if she were a man. If a husband and wife live apart, and the husband appropriates any of his wife's property—as is frequently the case now; for under such circumstances many a husband thinks he has a perfect right to take what belongs to his wife—it will be considered stealing, and she will be able to prosecute him as she would any other criminal who stole her property. The provisions of the Act also apply, not only to women who marry after the first of January 1883, but to all women who were married before the said date, as it has regard also to all property to which they may become entitled subsequent to the first of January 1883.

It is an Act that perhaps will affect the lower and middle classes more than it will affect the Upper Ten Thousand. For working-men and for the general trading community, it has a special interest and importance. In thousands of English homes at present, for example, the hard-working wife earns the living, sometimes bringing up a large family of children, while the husband spends his time in idleness, and in addition, not unfrequently demands money from his wife to waste on strong drink. This is a grievous wrong to a married woman, for which, as the law now stands, she can obtain no redress. In the future, all this will be altered, or at any rate if a wife submits to such treatment it will be her own fault, not the fault of the law. Her remedy will be to leave her husband. If he annoy his wife or take any money from her when they are living apart, she can protect herself by taking criminal proceedings against him.

It has been said that married women themselves, by various ways and means, will defeat the object of the new Act. In some cases, doubtless, they may do so; but we do not think that this will happen generally. Women, it would seem, are often stone-blind to the frailties or even the vices of the men whom they love; for they sometimes allow their husbands to coax or coerce them out of their property without protest or complaint. But will this be so in the future? We think not. Is not this spaniel-like submission in some measure owing to the fact that English wives know that the law of the land affords them little or no protection as regards their own money? Legally, they know that they

are nonentities; they know that their individuality is merged and lost in the individuality of their husbands. But when the law is altered, we believe that, as a general rule, married women will avail themselves of its provisions, and that they will not now, as in the past, so tamely acquiesce in being plundered of their earnings and property.

Furthermore, we have an impression that the new Act will have a very salutary effect on those husbands who, too indolent to work themselves, pillage the savings of their wives and abuse them into the bargain. To such men, more especially in large towns, the law is their only standard of right and wrong; when higher motives fail, their conduct is always influenced by the enactments on the statute-book. Indeed, speaking generally, we may say that if the law be not a reflection of public opinion, it invariably affects public opinion in this country. Now, a married woman separated from her husband is never safe without a divorce, which poor people have not the means to obtain. The husband can claim the earnings or wages of his wife as his own property; he knows that legally his wife's money belongs to him. But this will not be so under the new Act. He may coax money from his wife in the future, of course; but he cannot take it as a right; he must be content to accept it as a loan or as a gift. This, to drunken, cruel, or slothful husbands, will be quite a new experience, an experience which will be sure to have its effect on their conduct. Should they, in order to get possession of the earnings of their wives, resort to violence, then the law will grasp them with a vigorous hand. For wives with bad husbands, we regard the new Act as an unmixed blessing; and on the whole, we think it is favourable to society generally. In well-ordered homes, its probable effect will not be great; it will simply modify the marriage relationship, giving wives a more pronounced individuality of character and position.

The great principle which this Act seems to embody and enforce is, that husbands and wives may have separate as well as joint interests. Not until 1870 was this principle recognised by the English law. In that year, and again in 1874, measures were passed adopting what we may call this new social truth; and the Act of 1882 goes much further in the same direction, consolidating, amending, indeed to a great extent repealing the Acts of 1870 and 1874. Henceforth, no husband will be able to say to his wife: 'What is yours, is mine.'

Doubtless there are persons who will regard the present Act as too sweeping in its character. One of its provisions is, that a married woman may enter into contracts; that is, become a trustee, executrix, or administratrix, without the consent of her husband; a doctrine almost sufficient to make Sir William Blackstone turn in his grave. In some parts of America there is in operation the 'Cup and Saucer Act,' so called because it was said by the opponents of the measure, when it was first agitated, that if it became law, a husband would not be allowed to use his wife's teacups. That Act, however, appears to work well; and we see no strong reasons why the Married Women's Property Act should not work well in this country. To

married women it brings responsibilities as well as advantages. A wife with separate property will have to support her husband, children, and grandchildren, should they become chargeable to any union or parish; and if she carries on a trade apart from her husband, she will be subject to the bankruptcy laws. A wife who lends money to her husband for business purposes, will only have a poor chance of getting a dividend in case of his bankruptcy; for the claims of all the other creditors must be satisfied before hers. To the extent of her separate property, a married woman will be liable for all the debts she may have contracted prior to her marriage. For debts contracted after marriage by a wife having money of her own, the husband will not be liable unless she has acted as his agent. The Act provides that a married woman can sue or be sued for money independently of her husband; and as a wife can take criminal proceedings against her husband, so in like manner, when the circumstances are reversed, the husband can take criminal proceedings against his wife. The precise effect of the law as regards both married and unmarried people, remains yet to be seen; but in any case, the Act will have its uses, and will certainly remove some of the grievances under which married women have undoubtedly suffered in the past.

THE OLD CLAYMORE.

It is a matter of history how, after the battle of Culloden, the victorious soldiers ravaged the Highlands and ill-treated the inhabitants. For a long time afterwards, under the pretence of disarming them, the Highlanders were hunted and shot down like wild beasts, their habitations were burned, and their cattle and gear carried off. The record of these crimes forms such a tale of ruin and brutality, that one can scarcely believe such events have occurred in our own country within the last hundred and fifty years. Nevertheless, it was so.

Not long ago, an incident occurred to me, when on a visit to a minister in Glen Isla, which told forcibly how deep the memories of that troubled time had sunk into the hearts of the people, and how even now the anger could flash from the eyes of old men, and the blood run warm in their veins, when recalling their own reminiscences. We had returned from a day's fishing, had stowed away our rods and reels, and sat talking about the beauties of the Glen—its grand heather-covered mountains lit up by the setting sun, while the music of the rushing Isla sounded in our ears as it danced over its pebbly bed, or dashed against the big boulders which obstructed its course. Our conversation reverted to the inhabitants of the Glen; and my reverend friend informed me that a little way up there lived an old Highlander who could not be much less than ninety years old, and whose memory was still good; and that now and then, under certain circumstances, the old man would warm up and tell his tales of the old troubled days in his father's time, when Glen Isla and many another Highland valley was laid waste by a bloodthirsty soldiery.

In the cool of the evening, we strolled up to the old man's dwelling. It was an ancient cottage, situated a little way back from the road. The light played with a thousand tints among the mosses of the thickly thatched roof, and over it a thin curl of blue smoke hung lazily in the evening air. A few gnarled hawthorn trees sheltered the cottage from the blasts which swept down the mountain-sides; a patch of ground sloping down towards the river was devoted to the cultivation of cabbages, potatoes, &c.; while in front, the little garden was one blaze of flowers. High up, on the brow of the hill which formed the background, two or three goats in a semi-wild state were feeding, and stood out in bold relief against the evening sky. A little way down the road, the river Isla was arched over by an old bridge. Altogether, the spot breathed of quiet, peace, and content; and one could hardly fancy that the cruel sounds of war had ever been heard near so tranquil a spot.

As we approached the cottage, we were confronted by a boy of about ten years of age—such a little man! with neck, arms, and legs bare, and as brown as a nut; his dark hair innocent of brush and comb; and his eyes like those of an eagle—keen, piercing, determined, and intelligent. As he recognised the minister, his expression relaxed into a half-bashful smile, but quickly reverted into a somewhat distrustful look as he fixed his eye upon me, the stranger.

'Well, Alick, my man, is your grandfather in?' asked my friend.

'Ay, sir; he's ben the house,' he answered. 'Will ye please to step in?—Grandfather, here's the minister frae the maise asking for ye.'

As we entered, the old man rose with difficulty from his seat to welcome us. He pulled off his bonnet to the minister, who kindly shook hands with him. His figure was thin and bent, but wiry even now. In his younger days, he must have stood at least six feet; and his strong bony frame showed that at one time he had been a man of great strength. His face was furrowed with wrinkles, and his head was covered with a crop of snow-white hair. His eyes were gray, and the glance he directed at me was keen and proud. In a shaky voice, he asked us to sit down.

'Well, Alistair,' said the minister, 'and how are you? You're looking well. This fine warm weather agrees with you.'

'Thank ye, sir. I'm doing fine; but I'm getting auld, and I'm thinking my time must be near at hand.'

'You're quite right, Alistair, to think of what must come to us all some day or other; and you know we must all grow old in our turn, if God spares us. You, too, were young and hearty once, when your father was old and gray.'

'Deed, and that I was, sir; but it's langsyne—langsyne!'

'This, Alistair, is an old friend of mine,' said the minister, again turning to me, 'whom I have brought to shake hands with you.'

A kindlier look than I had yet seen filled his eyes as the old man bade me welcome.

'It's a long time, Alistair,' said my friend, 'since your father was laid to rest beside your mother and his two brothers in the old kirkyard; but you remember you have often told me that

his life was a more troubled one than yours has ever been; and indeed I have often wondered that he lived to such a good old age, for his stone says he was ninety-five when he fell asleep.

The mention of his father's troubled life evidently affected him, and I could see the light gathering in the old man's eyes.

'Father had a bad time o't, minister. But I maunna say too much before strangers.'

'You need not be afraid, Alister; my friend can keep what he hears to himself, when necessary.'

'Much need, sir—much need. An idle word has cost many a man his life before now.'

My friend motioned me to keep quiet, for the old man was evidently beginning to waken up, and the cleverly directed questions were drawing him out gradually.

'And so your father was ninety-five. Well, Alister, that is a good bit more than the allotted time of most men.'

'Deed, sir, it is that; and I whiles think it was fear that kept him living so long.'

'Fear, Alister! How do you make that out? I thought your father knew nothing about fear!'

'Fear, sir!' said the old man with a flash of fire kindling in his eyes—'fear, sir! My father never knew fear; nor his father before him, nor any of his bairns. It was no the ordinary fear—it was fear that the dragoons should come again, *and him not there to kill them*—that was the fear that kept father livin'!'

The fire was ablaze now; the old man's blood was running warm, and his pulse beating quicker. It was a conflict between his undaunted Highland spirit and his years—a conflict in which old age for the time being was vanquished. The fountains of his memory were opened, and the old man's tongue was loosened.

He told us how his father had been 'out in the '45'—how he had fought at Culloden in the 'good cause'—how he had been defeated—and how, as a fugitive, his father, with his own hand, had slain his pursuers; and at length, wounded and weary, he had reached the cottage where we now were. He told us how the vengeance-dealing soldiers and dragoons had followed him up, and how two of his brothers had been murdered in cold blood on the 'gowan brae' at the back of the house; and how his father had to hide in a cave away among the hills—a cave into which he could only crawl backwards, and where his only sustenance for months was a skinful of cold porridge, which his little daughter managed to convey from time to time to the neighbourhood of his hiding-place, choosing a different path each time she went, so as to avoid detection. At length, he told us, the search was given up—the soldiers were withdrawn; and more dead than alive, his father struggled back, to find his home made desolate, his kinsfolk slain, and starvation staring him in the face! Years passed away; but the poor people lived in constant dread of a return of the cruel soldiers; and one day many years afterwards, a detachment of dragoons was seen coming along the road towards the bridge. 'My father saw them comin'; and single-handed he went forth to meet them. He had put on his kilt, the wearing of which had been forbidden, and took his claymore with him. When the dragoons came to the bridge, my father drew his

sword, and said: 'You shall not cross the bridge, I tell you. Come down from your horses one by one, and I will fight with you. Or come down, if you dare, two at a time, and I will fight with you. But you shall not cross the bridge!'
My father stood there with his drawn claymore; and the dragoons were feared; *they laughed a laugh of fear*, and then they rode away again down the road; and my father stood there waitin'; but they never came back. Then my father came back and put away his claymore.'

Here the old man paused. Rising from his seat, he crept slowly to the door of the cottage, which he opened, and looked cautiously up and down the road. He then bolted the door of the room, and making a sign inculcating silence, he stood erect, and stretched his withered arm up to the rafters beneath the roof. From this hiding-place he pulled forth an old claymore, hacked and stained. 'This,' he said, holding out the weapon with trembling hand at arm's-length—'this is my father's claymore. With this he fought at Culloden; and this he has plugged into the heart of many of the bloodthirsty loons who desolated our land; and this is the claymore which frightened away the dragoons from the bridge, and would have killed every one of them, if they had dared to cross!'

The old man ceased speaking. He still stood tall and erect, with his snow-white locks falling on his shoulders, and the claymore trembling in his hand. His fiery spirit, which had sustained him during the time he was recalling the scenes of his youth, was yielding to his age; one more effort he made, and managed to put back the old claymore under the rafters; but his tough old frame was exhausted, and he sank back in his arm-chair by the fireside.

THE ART OF GOOD LIVING.

It is not in the newest work that one always finds the greatest interest, and a small octavo picked up at a bookstall has afforded us more entertainment than we should probably have found in the latest addition to Mudie's well-stocked shelves. The stall-keeper had evidently formed a hasty judgment of the book, based on the two most prominent words of the title-page, since he had carelessly thrown it into a basket with a miscellaneous array of others, attaching a label, 'Theological Works, one shilling each!' Taking up the book, curiosity was excited by noting that the volume was 'dedicated to the Right Worshipful the Court of Aldermen,' and that the author was described as 'Fellow of the Beef-steak Club, and an Honorary Member of several Foreign Picnics.' Curious to see what such a writer could find to say on theology, especially to such patrons, we purchased the volume and bore it home for careful perusal. Further examination showed that the author offered his book to the aforesaid Worshipful Court 'as a slight testimony of admiration for the capaciousness of their stomachs as well as of their understandings, and for the solidity of their heads as well as of their principles.' After this, we were not unprepared for the racy morsels that awaited us in the volume itself, of which the full title is, '*Essays: Moral, Philosophical, and*

Stomachical, on the Important Science of Good Living. By Launcelot Sturgeon, Esq. London: Whittaker, 1822.

The author starts by affirming that 'a stomach which is proof against all trials is the greatest of all blessings;' and declares it would be easy to demonstrate that it exercises an extended influence over the destinies of life. Epicurism is the result of 'that choicest gift of heaven, a refined and discriminating taste;' while gluttony is a mere effort of the appetite. To assist the uninitiated in forming a refined taste, seems to be the author's aim; and in a succession of chapters he lays down what he terms 'moral maxims and reflections,' all calculated to tend in that direction. Many reasons might be assigned for dining late; but one is sufficient: that, trivial concerns being dismissed, 'all our thoughts may be concentrated on our plate, and our undivided attention bestowed on what we are eating.' No one should hurry over a good dinner, and we are amazed to learn that 'five hours are a reasonable time to remain at table;' while the author is careful to remark that 'a well-bred man never looks at his watch in company.' He who keeps dinner waiting commits an irreparable injury, and such men should be looked upon as the common enemies of society. A bad dinner admits of no palliative, for one may as well be starved as poisoned, and he who invites you to 'take pot-luck,' must bear you some latent injury. 'Beware of such perfidious friends;' and to give more forcible expression to his indignant feelings, Mr Sturgeon suggests a new reading of Horace—

This man is vile; here, Roman! fix your mark.
His sole is black!

Only one offence is worse, and that is, 'to interrupt a man in the exercise of his jaws; therefore, never make an observation that requires an answer to any one while he is eating.'

The following paragraph must be quoted entire: 'When constrained to speak, abridge all superfluous words as a waste of valuable time; thus, if you wish to take wine with any one, instead of making a formal request to that effect, just bend the body quietly, and merely say: "Honour of some wine?" and if the same broken sentence be addressed to you, make no reply, but gently bob your head and fill your glass. But if either want of appetite or want of sense should lead you into a warm discussion during dinner, don't gesticulate with your knife in your hand, as if you were preparing to cut your antagonist's throat.'

The author is careful to advise the reader to avoid being seated near any large joint, 'unless you choose to incur the risk of being forced to waste your most precious moments in carving for others instead of for yourself.' Still, if one's untoward fate should place him behind a joint, a turkey, or a goose, no mistaken ideas of politeness should induce him to part with all the choice bits before he helps himself. 'Rise above such prejudices,' is the sage advice, 'of which weak minds are alone dupes; and turn a deaf ear to every request for any particular part on which you may have set your own inclination. We remember,' proceeds our author, 'to have dined, some years ago, with a country corporation, a

very prominent member of which was placed opposite to a noble haunch of venison, which, as may easily be supposed, was in universal request. He carved it with an alacrity and disposed of it with a degree of good-humour that was truly magnanimous; until a sleek, red-faced gentleman in a bob-wig, at the other end of the table, sent his plate a second time for another slice of fat; to whom our friend, eyeing him with some disdain, replied: "Another slice of fat, indeed! No, sir! There is but one slice left that is worth eating, and you cannot be so unconscionable as to expect it." Whereupon, he very composedly helped himself to what remained. His conduct was very generally applauded; and for our own part, we conceived the highest opinion of his judgment, and have ever since held him in the greatest respect.'

Passing reluctantly by many things about invitations to dinner—which, we are told, should always be penned in the morning, fasting—we scan hastily several chapters, and glean titbits here and there. The 'moral qualities of the stomach' are dilated upon, and the author affirms that 'the greatest defect in the constitution is a bad stomach. If the stomach be unsound, the heart which is lodged in it must be corrupted. It therefore follows,' continues our facetious gastronome, 'that all abstemious people are persons of bad character.' This leads to a chapter on 'The Philosophy of the Stomach,' which opens with a learned argument in support of the proposition that a certain well-known proverb should read, 'Eat to live, and live to eat;' the writer contending that designing persons, by substituting *not* for *and*, have destroyed the meaning and the whole value of the axiom. Such persons, he adds, are only envious reformers, who, having nothing to eat themselves, would persuade us to stint our own precious stomachs, in order to ruin the revenue, and so deprive cabinet ministers of their dinners; whereas the supreme object of every good citizen should be to multiply dinners by every means in his power. The great purposes of digestion are thus amusingly described: 'Not only is it wholly destructive of all rational enjoyment to swallow down one's meat without taking proper time to comment upon its merits and expatiate upon the happiness it procures us—or, in other words, to chew it with measure and reflection, and turn it as often as a minister does a new measure of finance before he can make it palatable—but on this trituration depends not alone the ineffable pleasure to be derived from expressing and compounding the juices of the viands and the flavour of the sauces, but the important object also of their undisturbed repose during the process of digestion.'

As few of those who are old enough to appreciate the pleasures of the table possess their masticators unworn by the edge of time and service, our author finds it hard to lay down any fixed rule on this subject; but affirms, as the result of a long series of experiments, that a mouthful of solid meat requires thirty-two bites of a perfect set of teeth to prepare it for deglutition. Assuming that these requisites have been secured, the author says that all one requires besides is repose, and gravely recommends the following as an opiate before retiring to bed: 'Take equal parts of brandy and rum, each a large

wine-glassful, half a glass of arrack, and the same quantity of curaçoa. To these add the juice of two small limes, and the rind—peeled thin—of one, with *quant. suff.* of refined sugar to render the whole palatable. Then pour in double the quantity of strong decoction of gunpowder tea, boiling hot, with two glasses of warm calf's-foot jelly. Stir well together, and swallow instantler.' To this he naively adds: 'If it fail of the desired effect, it can only be because either your conscience or your stomach is overloaded.'

Mr Sturgeon then proceeds to argue in favour of an improved system of education, by means of which children should, instead of reading Ovid's *Metamorphoses*, be instructed in those of Mrs Glasse, and proceed through a regular course of 'culinary classics.' He would have geography taught by associating Shrewsbury and Banbury with their cakes; the Isle of Wight with its cracknels, Kent with its cherries, Norfolk with its biffins, and Sussex with its dumplings. In the same spirit he would have travellers give their attention to matters of real utility, and carry culinary rather than astronomical instruments into unexplored regions. Instead of planetary, they should be required to take alimentary observations, to visit markets instead of libraries, and hold consultations with cooks instead of disputing with academicians.

These are a few of the entertaining morsels which, in the aggregate, make up a savoury dish of satire; and we can well imagine how many a bon-vivant of the last generation laughed at, even while he approved, these precepts on the art of good living.

MUMMY-FLOWERS.

In an interesting article which appeared in a recent number of the *Academy*, Miss Amelia B. Edwards describes some curious additions to the Boolak Museum of Cairo. Several of the royal mummies discovered last year at Deir-el-Bahari were, it will be remembered, found garlanded with flowers, those flowers being for the most part in wonderful preservation. M. Arthur Rhoné, in a recent letter to *Le Temps*, has described the extremely curious way in which these garlands are woven. They consist of the petals and sepals of various flowers, detached from their stems, and inclosed each in a folded leaf of either the Egyptian willow (*Salix salsa*) or the *Mimusops Kummel Bruce*. The floral ornaments thus devised were then arranged in rows—the points being all set one way—and connected by means of a thread of date-leaf fibre woven in a kind of chain-stitch. The whole resembles a coarse 'edging' of vegetable lace-work. Among the flowers thus preserved are the bright blue blossoms of the *Delphinium orientalis*, or larkspur; the blue lotus, or *Nymphaea carulea*; the white of *Nymphaea lotus*, with pink-tipped sepals; the blossoms of the *Sesbania Egyptiaca*; and the orange-hued flower of the *Carthamus tinctorius*, or safflower, so largely employed as a dye by the ancient inhabitants of the Nile valley. The dried fruit, as well as the dried yellow blossom, of the *Acacia Nilotica* is likewise present; and mention is also made of the blossom of a species of water-melon now extinct. The foregoing are all interwoven in

the garlands in which the mummy of Amenhotep I. was elaborately swathed. With others of the royal mummies were found fine detached specimens of both kinds of lotus, the blue and the white, with stems, blossoms, and seed-pods complete. Still more interesting is it to learn that upon the mummy of the priest Nessohi, maternal grandfather of the King Pinotem II. (twenty-first dynasty), there was found a specimen of the lichen known to botanists as the *Parmelia furfuracea*. This plant is indigenous to the islands of the Greek Archipelago, whence it must have been brought to Egypt at or before the period of the Her-Hor Dynasty (1100 or 1200 B.C.). Under the Arabic name of 'Kheba,' it is sold by the native druggists in Cairo to this day.

These frail relics of many a vanished spring have been arranged for the Boolak Museum with exquisite skill by that eminent traveller and botanist Dr Schweinfurth. Classified, mounted, and, so to say, illustrated by modern examples of the same flowers and plants, they fill eleven cases—a collection absolutely unique, and likely ever to remain so. The hues of these old-world flowers are said to be as brilliant as those of their modern prototypes; and, but for the labels which show them to be three thousand years apart, no ordinary observer could distinguish between those which were buried with the Pharaohs and those which were gathered and dried only a few months ago.

THE SONG OF THE HEART.

BLITHELY sings the young heart, and cheerily shines the sun;

'Tis spring o' the year, 'tis early morn, and life is but begun.

The day is bright, the heart is light,

And all the future years

Stretch forth as fair, with never a care,

Not clouds, nor tears.

Boldly sings the young heart, but scorchingly shines the sun;

'Tis the summer now, 'tis mid-day heat, the work of life is begun.

But Hope runs high, while the steadfast eye,

Fixed on the goal of Fame,

Heeds not the glare, for he who will dare,

Must win a name.

Cheerily sings the old heart, while slowly sets the sun;

'Tis autumn chill, 'tis eventide, and rest is now begun.

Brave was the heart that did its part,

And ever upheld the right:

Now sets the sun, the work is done;

Now comes the night.

Hushed now is the tired heart, and set now is the sun;

'Tis winter-time, the stars gleam out, the new life is begun.

Calm is the sleep, and long and deep,

But bright will the waking be;

The Cross has been borne, the Crown will be worn.

Through all Eternity.

NORWAY UNDER THE SNOW.

BY A NORWEGIAN.

HAVE you ever been to Norway in the winter?—You have not! Well, do you know what seventy degrees under freezing-point means?—Not exactly! I am glad you qualify the negation. You mean to say you have read in travellers' accounts of Siberian and American colds, of negative degrees of temperature, when horses perish and birds drop dead? I have read of those too, but never experienced them; either it must be that our Norwegian degrees are 'smaller' than others, or else we have in Norway a different 'draught,' as we should say, in the air. However that may be, we have every year such a temperature, and it is then that we Norwegians enjoy ourselves. Let me endeavour to sketch a winter-day in Norway when the thermometer is seventy degrees below freezing-point.

You go to bed overnight warm and comfortable, your last recollection of existence being hot punch, bright eyes, and a roaring logfire in the stove of your bedroom; you dream of summer, of balmy air, of walks in the dusk of a northern summer's evening with the girl you love, of the scent of hay, and the fragrance of mountain herbs, and you are rudely awakened from your ethereal existence by sharp detonating sounds. But if you know the sound, you know also that it is merely the herald of tremendous frost. You hear the old oak staircase crack; you hear a splitting noise in the frame of the window, and your bedpost seems to have got gout in its legs; but sleep on! it is only the 'natural susceptibility' of wood to cold. Day breaks, and you are awakened by an irritating sensation about your moustaches, and you find that these have actually fastened on to the coverlet and are white with frost; but only keep well under the feather-bed of soft down of the eiderfowl from the Lofoden Islands, and you will find you are after all, in spite of external appearances, on excellent terms with yourself.

A rap at the door, and enters, in the fashion of the country, a pretty blue-eyed Norwegian maid, who cheerfully asks how you have slept, and tells you that 'it is the coldest night we have had this winter.' She brings with her a cup of excellent coffee and the necessaries for a morning's ablution, as the tub has no temptation to-day; but what seems, however, to appeal stronger to your imagination, and act on your tenderest feelings of gratitude towards the damsel, is the fagot-wood and logs she carries, which, soon ablaze in the capacious stove, send a thrill of comfort to the core of your heart. You hasten up and look at the thermometer by the window: it stands between sixty and sixty-five degrees below freezing-point; you rub your hands with delight at the idea; it has been seventy degrees in the night. Now it is really cold!

We gather at breakfast in the commodious dining-room of the house, where a blazing logfire sends its cheering influence to the farthest end of the hall, and we admire the fanciful play of the winter sun's rays on the Brazilian flora of the ice-covered windows. We talk and chaff over the breakfast, discuss last night's dance, and lay plans for the enjoyment of the short day of the North. Never did you seem more inclined to see your friends; you hesitate between asking them all to come in the afternoon, or going to a dance at some neighbouring *gaard*, where there is a gathering; and as there are young folks of the company, the latter is decided on.

But let us go outside. You sally forth, dressed 'to the white of your eyes' in furs; and it is with a pleasant sensation of importance that you hear the *knirken*, as we say in Norway, under your heels as you walk on the crisp snow. Everything has a frosty and bright appearance, only the poor sparrow perched on the stack of corn provided for his wants (a Norse custom), chirps sadly; while the wily magpie under the eaves looks like an old philosopher, and tries hard to appear to have not the least knowledge of where the spring chickens, the eggs, and the cherries, and all the other good things have gone

to, which have so mysteriously disappeared from under the eagle eye of the goodwife during the days of summer. But in yonder birch, silvery with the hoar-frost, there is life and merriment! A flock of capercaillies have settled there in the early morn, and while the proud cock swaggers about in peacock-like fashion, boasting of his lovely tail, which glistens in the sun's rays with all the colours of the rainbow, his *inamorata* the hen affects quite an air of unconscious *naïveté* as she winds through the filigree branches, so marvellously illustrative of the disposition of many a representative of the fair sex. You look at the scene, and you love all creation; your gun is forgotten; the picture is too pleasing. Well, perhaps the destructive propensities may be too strong for you; you rush for it, tear the cover off, but in an instant drop it with an exclamation. The barrel is like a red-hot poker thrust between your fingers; the skin of your palm is gone through the contact with iron; and the magpie yonder, who has been watching you from under his wing all the while, suddenly shakes himself into life, and takes his slow departure with a malicious shriek.

Now comes the great event of the day, lunch, or rather dinner; and by the time the coffee and cigars have been consumed, in Norse fashion, with the ladies, the stars are already twinkling from the dark-blue northern sky. We hear the stamping and neighing of the horses as the sleighs are being brought round to the hall-door. You finish your cigar—it is too cold to smoke out of doors—and get into your furcoat, made from the fell of a Norwegian wolf; topboots lined with soft sheepskin; fur gloves; and to crown it all, a bear-skin cap drawn over your ears; and you feel fit for a drive to the North Pole.

You see that the ladies and children in the roomy family sleigh are well wrapped up in bearskin and foot-bags; but your interest is concentrated more on your own 'fare,' the girl from whose eyes you last night in the dance drunk those sweet but painful draughts of uncertain love, who now again trusts herself to your guiding arm, and this time to curb the capricious temper of a Norwegian sleigh-trotter. Carefully you embalm her in the light *spids slede*, or point-sleigh; you examine the wiry shafts and the harness with great care, stroke the arching neck of the animal with an encouraging word, and take your seat on the perch behind. 'Let him go, Gustaf!' And you are off along the hard trodden road with the speed of an avalanche, whilst the frosty air whistles around you, and makes the blood for a moment tingle in your cheeks, and you feel, through the rapid motion, a delight and internal exuberance of spirits, which is equally shared by the fair companion before you, as you speed through the glistening snow. How you bless the inventor of that vehicle, whose genius has created this pleasant little gondola of the snow for your individual benefit, in which you may be so near the object of your affection, watch every play of her capricious nature in her shadowed eyes, and inhale that sweet perfume so delicious and intoxicating to every

lover. Yes, how many tales of true love have not been told in a Norwegian point-sleigh, and treasured for ever by the fair listener!

And what a scene, what an impressive atom of Nature's creation you gaze on. High above you is the vaulted arch of the deep-blue heavens, the colour of which you will only see near the Polar Circle, and which is closely studded by innumerable silvery stars. There is the merry Polar star right above you, round which the 'Great Bear' walks his nightly beat, followed in solemn procession by the valiant Orion, who lifts his glistening glaive against the frontlet of the defiant Bull; while lo! just above the crowns of the pine-trees in the forest yonder, a brilliant star arises, a visitor from a milder clime, not always seen in the northern sky, the Dog-star, the vigilant Sirius of the Greeks; and across the heavens is cast a broad ribbon shining with myriads of invisible worlds, the Milky-way, along which the valorous Scandinavian *Kjemper*, the gallant warriors of the Saga, rode to Walhalla, the portals of which you see encircled by the curved segment of the aurora-borealis, whose fiery rays erratically flood the heavens with a thousand colours and fantastic shapes of liquid flame. And around you is the scenery of a Norwegian landscape, with its hills and dales bementled in virgin snow, in which the distant mountains recline in bold relief on the dark background, which also invests the solemn pine-trees, under whose snow-laden crowns and boughs we are now sweeping with a mysticism which makes us ponder on the innumerable tales of the goblin and the brownie, in which old Norway abounds.

Speed on, speed on, my fleet *sleepner*, to where the lights are twinkling with a merry welcome from every window! In the spacious hall, adorned with the tropics of the chase, the bear-head and the elk-antlers, we receive a hearty welcome, and the customary draught from the loving-cup, which nobody must refuse. Whilst the ladies arrange their slightly ruffled feathers, we take a stroll through the festive rooms, thronged with a merry crowd. Here is a room reserved for card-players, where the silent demeanour and sombre mien of the company indicate that large stakes are at issue; and another, where you may hear stories of money made and money misspent—of fortunes made in a day by forest-buying and forest-selling, and squandered as quickly; tales of hunting and sport, of loving and wooing, and where the rafters ring with the merriment and laughter of the proud Norwegian peasant, who knows of no aristocracy by blood, no inherited distinction, but who nevertheless can boast of a descent of a thousand years from the kings and jarls of ancient Scandinavia. And let us not forget a peep into the supper-room. The long *sal*, as it is termed in Norwegian, with an immense table draped in snow-white cloth, and covered with ornaments and innumerable dishes and removes, on which the 'pride of every good housewife is centred, is certainly a sight worth seeing; and here is neither forgotten the *dram og öl*, nor the *smörgåas*, with which the Norseman always opens the dinner campaign.

But let us hasten to the ballroom, where dancing under the fragrant pine-boughs with

the wax-candles entwined, is in full swing, where you will find as finely a turned ankle and as white a shoulder as in any ballroom in Paris or London. There is winter and hard frost without; but the dancing goes on uninter-ruptedly within, and the young blood shoots quicker through the veins by the contrast; and the dancing lasts till day breaks, when the faint rays of the chilly winter sun drive you off to sleep and sweet dreams.

Such is Norway under the snow! A life in the very centre of death, the vigorous Scandi-navian nature is roused to its highest point of vitality through the rigidity of the Arctic winter.

THE INGENIOUS SMUGGLERS.

A TALE OF SEVENTY YEARS AGO.

THE following curious stories, illustrating the clever devices adopted by smugglers nearly a century since to conceal their operations from the officers of the Revenue, were related by a physician, long since deceased, who for many years had carried on an extensive practice on the southern coast of England.

The doctor was quite a young man when he succeeded to his father's practice about the year 1810, and settled in the old family house, situated less than a mile from the sea-coast. His practice included a large island, which from its peculiar position could only be approached over a long range of dreary and very dangerous sands, pass-able at low-water only, but completely covered at high tides.

At the period above mentioned, smuggling was a regularly recognised business all round the English coasts, but especially those which lay near France. The island in question was then but thinly populated by four or five farmers and their labourers, who were born smugglers to a man. But although the doctor had con-stantly heard of these people, he had seen nothing of them personally, his education having kept him much from home. He soon, however, had an opportunity of making their close acquaint-ance in a manner perhaps more romantic than agreeable.

The doctor having had occasion to visit, pro-fessionally, the wife of one of the farmers, named Sims, who was expecting to add to the 'olive branches' round the family table, was leisurely proceeding late at night to the cottage, near the shore, where he usually left his horse, when, on turning the corner of a wall, he was suddenly seized by four men, one of whom held a lantern to his face, whilst a second presented an enormous horse-pistol at his head.

'A stranger!' exclaimed the lantern-holder. 'A revenue informer!' said a second. 'A pre-ventative spy!' cried a third.

The doctor instantly realising his position, frankly replied: 'You are quite mistaken, gentle-men. I am neither one nor the other. My name is Stavely—Dr Stavely—of Slaperton. I have just been attending Mrs Sims, and I am now—'

'My missus!' exclaimed the fourth man; and catching up the lantern, held it to the doctor's

face. At once recognising him, Sims held out his great broad hand, saying: 'Sure enough, and so it is.—I humbly beg your pardon, doctor. Had we known it was you, we should not have handled you so roughly. But you know, sir, our trade's a risky one, and we have to look out precious sharp sometimes for strangers and informers.' Then adding, after a pause: 'I need hardly ask you, sir, to keep quiet as to what you have seen.'

The doctor readily assured them all that their secret was perfectly safe in his custody; when Sims, instantly producing a large pocket-flask, filled out some brandy in the cup, saying: 'We must wet the bargain, doctor, with a sip all round;' and presented the cup to the doctor.

It contained the finest French brandy, and which, it is to be feared, had never passed His Majesty's Customs, nor had been profaned by the touch of the odious 'pre-ventative' man. The spirit was so potent that the doctor could take but a mere sip. He was not a little amazed, however, to see the large metal cup completely drained by each of the men in turn, as they drank 'Health and long life to the young doctor,' whose frank and open manner had apparently quite won their hearts. All four accompanied him to the cottage, and saw him safely mounted for his lonely ride home over the sands.

Two days after this, the doctor was again one evening in attendance on Mrs Sims, and finding his visit would probably be prolonged, he returned down-stairs and took his seat in the 'keeping-room,' a large and comfortable apartment, but having the front-door of the house opening into it direct, without an intervening hall or passage, an arrangement common enough in old-fashioned farmhouses. Two windows looked out to the front; and the commodious fireplace on one side was flanked by large cushioned elbow-chairs, inviting rest and repose. A door at the inner side of the room opened into a sort of washhouse or scullery, with one very small barred window, but having no door or any sort of outlet opening to the outside.

The doctor seated himself by the fire; and having partaken of a substantial tea, to which was added a flask of French *eau-de-vie*—without which accompaniment, by-the-by, nothing ever seemed to be done in this enlightened region—he took up a copy of *Gulliver's Travels*, and com-posed himself very comfortably in one of the easy-chairs by the hospitable blaze. Whether it was the warmth of the fire or of the *eau-de-vie*, or the influence of the voracious adventures of Mr Lemuel Gulliver, it is impossible to say, but the doctor dropped off to sleep, and slept soundly till between eleven and twelve, when he was aware, without looking up, of the house-door opening and voices whispering together, and then heard Sims say: 'It's all safe; I see it's only the doctor.' Two men then crossed the room, stepping lightly, and apparently carrying heavy burdens each, and disappeared into the scullery at the back, shortly afterwards followed by Sims himself. 'Some smuggling job, of course, and they are going to deposit the tubs in the scullery,' thought the doctor, intending to have a yarn with Sims when he came out.

The doctor having waited a very considerable time, and all being profoundly silent, his surprise

was naturally excited as to what these three men could possibly be about in the little scullery to conduct their proceedings with such extraordinary silence. After another spell of waiting, the doctor's curiosity quite overcame his discretion; he could stand it no longer; he must see for himself; and taking up a candle, he pushed open the door and entered the scullery. It was empty! The doctor's astonishment was unbounded. Not a sign of Sims or his two men! Where had they gone? What on earth had become of them? 'Ah! a secret door, of course, opening into the yard;' and then, with the candle, he made a close and exact scrutiny of the walls. It was a small place, about ten feet square, built against the house. Its three walls were substantial red brick, without the slightest sign or mark indicating any aperture but the small square window, which, as already stated, was crossed by an iron bar; and the roof was ordinary timber and tiles. The place contained nothing at all but a sort of rough table or dresser on one side, two washing-tubs, an old tool-chest, and a few other odds and ends. Each of these underwent the closest scrutiny by the young doctor. He opened the chest; but it was empty. The wash-tubs also were empty.

The doctor was perfectly staggered. Utterly perplexed and bewildered, he returned to his chair, closing the door after him, and set himself to think how, and by what piece of ingenuity, this singular feat had been accomplished, when he received a message from the nurse to attend his patient up-stairs. A few minutes afterwards, the front-door was closed, and he heard the sound of footsteps leaving the house, which showed him plainly that as the men went 'somewhere' through the scullery, they could, of course, return from 'somewhere' by the same mysterious route. Anyway it was a curious mystery, and the doctor resolved that he would ferret it out somehow sooner or later.

After he had paid his visit, he again returned to his comfortable chair, and found a well-appointed supper ready laid. In a few minutes the scullery door quietly opened, and, to the great astonishment of the doctor, Sims entered from within, all smiles and *bonhomie*, begging the doctor at once to be seated and partake of supper.

He made anxious inquiries about his wife, to which the doctor was able to return reassuring answers. Some desultory talk followed, after which the doctor, taking advantage of a brief pause, said bluntly: 'Oh, I say, Sims, where did you and your two men get to when you went into the scullery this evening? You all disappeared in some marvellous sort of way; but as there is neither chimney, nor window, nor second door, I can't conceive how you all managed it.'

'Oh, well, sir,' replied Sims, a broad grin on his good-tempered face, 'you saw us all go in, and you saw me come out. The other two came out whilst you were up-stairs. What more would you have?'

'Ay, ay,' said the doctor; 'that's all very well. But where were you all between whiles? Not a soul was in the place, for I looked it all round carefully.' The doctor perceived by his evasive replies that Sims evidently did not wish to tell

the secret; and so, after a little thrusting and parrying on both sides, the doctor wisely gave it up, resolving to bide his time, but being quite determined to find the trick out; for trick there evidently was, and a clever one too.

Supper was barely ended when the doctor was again called up-stairs, and in a short time had the pleasure of announcing to Sims the happy arrival of another 'olive branch'—the eighth—to grace and strengthen the family tree. Nor was he suffered to depart until the auspicious event had been celebrated in sundry bumpers of French brandy.

Two days after this, the doctor was again in attendance on his patient; but before going into the house, he closely and carefully examined the walls of the mysterious scullery outside; but found nothing but plain hard brick, with not the slightest mark or sign of an aperture of any sort; and the iron bar at the window was firm and rigid.

After seeing his patient, he returned to the parlour to lunch. The door of the scullery was wide open, and the sun was shining brightly in. The doctor took another and still more careful survey, this time by broad daylight, but found nothing at all to elucidate the mystery. Everything was exactly as he had left it. 'Unaccountable,' muttered the doctor, 'wholly, entirely unaccountable!'

Having despatched his lunch, the doctor was leaning back in his chair, his thoughts occupied entirely with this veritable 'mysterious chamber,' and his eyes fixed upon the old tool-chest, which was in full view through the open door. In the profound silence which reigned around, the doctor thought he heard a slight noise, apparently proceeding from the chest. A thought suddenly struck him; he stepped lightly from his chair and stood aside, but keeping his eye on the chest. What was his astonishment to see the lid very slowly rising, and presently the broad, good-natured, red face of Sims appear on the edge, gradually followed by the rest of that worthy's portly person! Sims stepped out on to the floor, closed the lid, and turning round, was somewhat disconcerted to see the doctor standing full grin in the doorway.

'So I have unearthed the badger, have I?' said he, extending his hand to Sims, which the other grasped warmly.

'Ay, ay, doctor,' replied Sims; 'I'm done this time, sure-ly. But I know I have nothing to fear from you, sir.'

The doctor assured him that his secret was perfectly safe with him and always would be; when he was agreeably surprised by Sims proposing that, as he had found out part of the secret, he might as well know all, and therefore asked him if he would like to see what he pleasantly called the 'warehouse.' The doctor readily assenting, Sims closed and bolted the scullery door inside; and then raising the lid of the old chest, pressed in what in appearance was simply one of the six screws which secured one of the hinges, by which a catch beneath the bottom of the chest was released. The bottom was then lifted, and below appeared a square trap-door with an iron ring. Pulling this up, a ladder was seen secured upright, to the side of the shaft, which the doctor at once perceived had

been originally a well. The doctor was directed to descend, followed by Sims, who carefully closed the lid of the chest, then the false bottom, and lastly the trap-door, securing the last by a bolt. After descending many feet, the doctor found himself on firm ground; and Sims, feeling about, drew from a recess some candles and a tinder-box—there were no lucifers in 1810—and having lighted two of the candles, handed one to the doctor; and taking the other himself, led the way through a low narrow passage about five or six feet long, till it opened into a chamber twelve feet square and about seven or eight feet high. In this chamber were carefully stowed a number of 'tubs' of French brandy; small bales containing French cambrics, laces, silks, and such like; baskets holding so many bottles of pure Schiedam, and a variety of other things of foreign make which would always command a ready sale in the smugglers' market. The place felt dry and warm, ventilation being carried on through a pipe passing upwards to the roof of the house above, and having the appearance outside, of an ordinary rain-water pipe.

'There,' said Sims, 'that's our "warehouse," sir; and that's our present stock, which I expect we shall part with before the week is out.'

'Ay; but how do you manage *that*? That's just the trick of your trade I can't understand.'

'Oh, nothing easier, when you have all your arrangements made out. Up London-way there's a rich firm in Houndsditch who are always ready to pay cash down—and a good price too, mind you—for any foreign goods sent to them. All we've got to do is to see the goods safely into the hands of their agent at Bradston up yonder [meaning the market-town near]. Well, he counts up the goods and pays us the price down. After that, all further responsibility rests on Tommy Sutton, who'

'What!' exclaimed the doctor; 'Tommy Sutton, did you say? Not the tax collector, surely?'

Sims nodded, with a broad grin. 'He collects the revenue with one hand, and cleverly cheats them, like winkin', with the other.—Ah!' said Mr Sims, relapsing into a highly moral strain, 'I fear, sir, it's a wicked world!' And turning to a recess in the wall, sought to relieve his troubled mind with the spirituous panacea so popular on all and every occasion in these parts.

The smuggler then, without the slightest hesitation, in reply to the doctor's inquiries, proceeded to relate that, on taking the farm some years before, he had in his employment a wonderfully intelligent and clever fellow about twenty-eight or thirty, who called himself 'John Smith.' He had evidently been well and carefully educated. He wrote a fine hand with great facility, was a good accountant, a fair draughtsman, and an admirable mechanic. He played the violin too, and sang very well. But he never could by any chance be got to speak of his antecedents, where he came from, or where his friends lived. Besides this—what was certainly very singular in those days—he was a 'total abstainer,' and never smoked. He entered with hearty gusto into the smuggling business, evidently appreciating that far more than farm-work; and many a time his quick intelligence and ready wit had succeeded in pull-

ing through a serious scrape, or devised means to carry out some difficult or hazardous job. Sims then went on to relate how Smith had called his attention to a dry well in the yard close behind the house, which was covered over, but not filled up. Smith had carefully examined it, and found it dry, clean, well built, and about twenty feet deep. He immediately proposed—for his intelligence saw a good opportunity—to construct a chamber at the bottom of this well as a secret 'warehouse' for smuggled goods, using the well as a shaft for entry and exit; first, however, suggesting the erection of a supposed scullery against the back of the house, so as to cover the well and conceal their operations. Accordingly, with the help of two trusty friends, the work was at last completed, but only after a vast amount of toil and labour day and night, which was necessarily increased by the difficulty of keeping their proceedings quiet. An upright ladder was fixed against the side of the well, and a square hinged trap-door covered the mouth of the shaft. But it at once became evident to Smith's quick perception that this trap-door, unless effectually and permanently concealed in some way or other, might lead to awkward discoveries. What was to be done? Here Smith's ingenuity again came to the rescue; he proposed to utilise a large old tool-chest that belonged to Sims, and carried out the brilliant idea entirely himself. The bottom was carefully hinged underneath, and shut to with a catch, which was released when pressed upon by a stout wire passing downwards through the side of the chest, and attached at its upper end to what appeared to be merely one of the hinge screws. The whole was so carefully and neatly executed as to defy the closest inspection.

'Well,' said the doctor, when they emerged into daylight, 'I must confess the whole contrivance is most ingenious, and I congratulate you on having so clever an assistant.'

'Ah! but that's just it,' said Sims, ruefully scratching his head. 'Smith's gone, worse luck—gone as mysteriously as he came. One night about two years ago we had had a sharp brush with three pre-ventative men, one of whom suddenly recognised Smith, and called him by the name of Tom Walsh. But in the row and confusion, Tom Walsh *alias* John Smith disappeared, and has never been seen in these parts since. But,' continued Sims, 'I read in the paper some four months back, that a London man, about thirty-five years old, calling himself James Collins, but whose real name was said to be Thomas Walsh, was hanged at York for fraud and forgery, and it was stated at the trial that he was implicated in more than one burglary and murder. Now, whether this was our clever ingenious friend Jack Smith or not, of course I can't pretend to say; but the name and the age agree exactly; and it is clear that there was some mystery about him, which he took precious good care to keep to himself.' Then, after a pause, he added: 'Ah! we missed his ready thought and handy cheerful ways very much. We shan't come across another like him in a hurry, I can tell you. Why, it was he who planned and carried out so cleverly Jemmy Bellamy's "warehouse;" and a smart trick it is too, and one not likely to be discovered.'

'Jemmy Bellamy!' exclaimed the doctor; 'why, does he too carry on the old trade?'

'Does he? Why, we all do,' said Sims with a knowing wink. 'How do you suppose that old Phil Boddgkin managed to retire with thirty thousand pounds? You don't suppose all that was made out of farming, do you, though some fools pretend to believe it?'

'By-the-by, Jemmy Bellamy's a patient of mine just now for injured shoulder, which he got going to market last week; and so I'—

'Going to market, ho, ho, ho! Landing some tubs, you mean, which he was doing, one pitch-dark night, when he got that fall on the beach,' grinned Sims. 'When he goes to Bradston market, Tommy Sutton's his best customer.'

'Ah!' said the doctor, 'I see; that's the game, is it? Well, I'll certainly ask him to let me see his warehouse, as you have yours, the very next opportunity.'

Two days after this, the doctor was again at Sims' farm, where he found a pressing invitation from Jemmy Bellamy to go at once to his house, in the centre of the island. Now, this Bellamy—or 'Big Jemmy' as he was always called—was quite a character in his way. He was of enormous bulk and stature, standing quite six feet six inches, and remarkable for his kindness of heart and unruffled good temper, which nothing ever seemed to put out—no, not even the inconvenient and irregular curiosity of the 'pre-wentative man.' He possessed an immense visage, in which the colours of the setting-sun predominated; and his stupendous nose, shaded rich purple, stood out with artistic boldness from the blooming, highly-coloured field surrounding it. But his great point was his extraordinary capacity for imbibing all and any kind of strong drink, which was so utterly marvellous, that it was with difficulty the doctor—when professionally examining him—could be made to comprehend it. French brandy, or Dutch Schiedam, the commonest English gin, or the worst British rum, or whisky from Ireland or Scotland, were all the same to Jemmy; in the most incredible quantities they all went down his capacious maw like water, and produced almost as little effect; whilst as to common beer, he consumed it by the gallon.

The doctor was warmly welcomed by 'Big Jemmy;' and after his shoulder had been duly examined, he offered at once to show the doctor his 'warehouse,' as he understood he wished to see it. Accordingly, he led the way to the stable, and going to the stall farthest from the door, laid hold of what appeared to be a common ring-bolt for securing horses; and unscrewing this, the manger and the upright board beneath it were released, and swung outwards on hinges like a door, and disclosed a second door inside. On opening this, a flight of steps were seen just beyond; and these led straight down into a chamber about twelve feet square and seven or eight feet high; ventilation being cleverly contrived, as in the other case, by a pipe leading up the side of an outhouse above, to which it apparently belonged. The 'warehouse' was now empty, as its late contents had been recently cleared.

'All this was Smith's work too, I believe?' asked the doctor.

'Yes,' replied Jemmy; 'entirely. He proposed it first, then planned it, and carried it out afterwards, doing all the mechanical and carpenter's work with his own hands. Ah! he was a clever chap, he was; too clever by half to live! You've heard, I suppose, of the manner of his death at York?' The doctor nodded; and Jemmy continued: 'It was a sad end, anyhow, for so clever and pleasant a young fellow to come to. All along of bad company, I greatly fear,' added Mr James Bellamy, in a highly moral and deprecatory tone.

As the doctor was evidently greatly interested in these very original 'warehouses,' Bellamy proposed to take him to another farm nearer the coast, belonging to a man named Straker, who had another 'mysterious chamber,' very cleverly contrived. The doctor and his colossal friend were most kindly welcomed by Straker, who readily consented to admit the doctor to his secret. Adjoining the stable was a long narrow harness-room, built up against a rough bank about sixteen or eighteen feet high. The farther end of this room was lined with deals, and running across it was a row of stout wooden pegs, whereon bridles, hats, coats, &c. were hung. Bolting the door—a wise precaution—Straker unscrewed the last peg, below which appeared a brass stud or button. Pressing this—just as in the other cases—a catch was released, and the deal lining moved on a hinge like a door, disclosing a second one behind it, which led direct into a small chamber cut in the bank at the rear, filled nearly to the roof with goods all ready for removal to the smugglers' market in the usual way.

On re-entering the stable, Straker showed the doctor two or three trusses of hay, and informed him that the interior of each had been removed and replaced by tin cases filled with cambric, laces, and such-like articles, which could be closely packed away. The doctor was also shown several pumpkins and large vegetable marrows which were carefully cultivated for the express purpose of being hollowed out, and receiving tin cases for the transport of smaller articles which could be stowed away inside; and even turnips were often employed in the same curious way; for such very ordinary commodities as these would, of course, easily pass unsuspected in a common market-cart going to market on the usual Saturdays.

The doctor was a universal favourite wherever he went, and he soon became involuntarily the confidant of all the smugglers round about; but, to his honour be it recorded, he never divulged a single secret that had been confided to him; nor was he ever heard even to allude to the question of smuggling during his residence and practice; and it was not till nearly forty years afterwards, when he had retired from the profession and was residing in London, and when all those connected with the 'warehouses' were either dead or had left the neighbourhood, that he related the cases forming the subject of this paper. Many and curious were the smuggling anecdotes the doctor was in the habit of relating in his latter years, and of the wonderful ingenuity displayed in constructing these secret 'warehouses' on the island, as those we have here referred to were by no means the only ones.

Some, indeed, are said to remain unto this day ; but as the entrances have been built up, their existence is wholly unknown to the present occupiers of the adjoining houses.

SIX WEEKS IN SICILY.

Now that war and its consequences have for the present rendered Egypt undesirable as a wintering-ground for those in search of health, or the larger and ever-increasing luxurious class who seek to avoid the cold and bad weather we experience for so many months in the year, there must be many invalids and friends of invalids casting about in their minds with anxious solicitude the query : 'Where shall we go?' If a few weeks of our pleasant experience in the spring of 1881 encourage any to try Sicily, we believe they will not regret following our steps.

Anything more beautiful it is impossible to imagine than the entrance to the lovely Bay of Palermo, guarded on one side by the massive Monte Pellegrino, and on the other by Monte Navarino ; while the city, bathed in perpetual sunshine, and laved by the calm waters of the Mediterranean, lies at the mouth of the rich and fertile plain, the Conca d'Oro (Shell of Gold) ; so named, we conclude, from the golden fruit which bulks so largely in the exports of Palermo, whose plain is simply a thicket of many square miles of orange and lemon gardens, stretching up to an encircling amphitheatre of hills, some of which tower to the height of five thousand feet—altogether completing a picture from which any artist might well have drawn as a subject for The Plains of Heaven. For invalids, Palermo is rapidly becoming a favourite winter resort, the temperature between night and day being subject to less variation there than in almost any other known place.

The city itself is beautifully clean. The hotels are comfortable and well managed, if a little expensive—from twelve to twenty francs per day according to rooms chosen, or rather, we should say, according to arrangements made before allowing your luggage to be removed from the cab. A note here may not be amiss to travellers—namely, that we always found ourselves in a more independent and better position for making a bargain when in a carriage or cab, instead of the hotel omnibus, which meets you at the station, where, once entered, you are apt to be considered bagged game. The best hotels scout the word *pension* ; but all are amenable to an *arrangement*, especially in the case of a family, as we were—or to a stay of some days or weeks. Every one who knows what travelling in Italy means, still more in Sicily, knows how necessary this is, if you wish to avoid the unpleasant companionship of a fretted spirit, a heavy heart, and a light purse.

The Ragusa family hold both the *Trinacria* and the *Hôtel de Palmes*. We, however, were recommended to the *Hôtel de France*, and were very comfortable, and illness supervening to one of our party, were most kindly and liberally dealt with by the manager or *directeur*.

The fertility of the land and its value in the neighbourhood of Palermo, may best be realised when one learns that an acre of lemon-trees in

favourable seasons yields a return of about seventy pounds sterling ; nevertheless, oranges are freely bought at a penny a dozen—oranges which have had the misfortune of spoiling all our subsequent enjoyment of imported fruit.

The vegetation is altogether striking, the Botanical Gardens furnishing an avenue of date and other palms, with fine specimens of bamboo, cane, and other Eastern and Southern trees ; while beautiful ornamental fountains and tanks foster an abundant bloom of lilies of the Nile, and a profusion of tresses of maidenhair and other delicate ferns. Some of the creeping plants are lovely beyond description. The exquisite *Bougainvillea*, with their brilliant blossom-like foliage, were literally masses of bloom and colour. Imagine, if you can, three or four feet in depth of solid bloom, of the richest softest mauve, or the brightest shade of coral, festooning an arch or balcony to the height of twenty or thirty feet ! Our visit was in March and April.

The private gardens of some of the more wealthy inhabitants are thrown open to strangers and visitors ; and a great pleasure we had in visiting the grounds of the beautiful Belmonte, which climb the Pellegrino, where every now and then a rocky seat invites you to rest on your way to the little temple higher on the hill. Here the best view is to be obtained of the magnificent prospect at your feet ; or you can gaze and wonder at the magnificent specimens of aloes and prickly-pear which in some places dot, in others clothe the rocky banks around you, every crevice of the rock being filled with the bright pink star of the *Saponaria Calabrica*, which also creeps down into the meadows beneath, shedding a rosy glowing haze on the feeding-ground of a flock of wild scrambling picturesque goats. What at home would have been carefully nurtured, petted, and coaxed as individual plants, are here treated as denizens of the shrubbery. Geraniums formed a hedge of four feet in width, and of equal height. It was very evident that a good understanding exists between Nature and the gardener, he not interfering with, but only humouring her in her sweet wilful ways.

Before quitting the subject of vegetation, we must not forget to speak of the truly picturesque olive-trees which line some of the roads in the outskirts of Palermo. We had been almost ashamed to acknowledge to ourselves a feeling of disappointment on our first introduction to this classic tree. The silver-lined foliage, thin, and wanting in mass and impressiveness—whatever great authorities like Mr Ruskin may say—did not come up to our expectations and ideas. Some of these aged olives are veterans that can trace back their infancy to the times of the Saracens, some eleven hundred years ago, and seem to be gifted with an almost supernatural vitality. Their stems, gnarled and knotted, were bereft of everything but the bark, and this in many cases, while frayed and fretted into an open interwoven lacework, yet served as the channel for conveying life and sap to a crown of young fresh fruit-bearing branches.

To an artist's eye, the Eastern character of much of the architecture cannot fail to be deeply interesting. Even so late as the time of the Normans, it was customary to employ Arabian architects and artists for the building and decora-

tion of their sacred edifices. The barbaric gorgeousness of the rich mosaics of the cathedral, and still more so of the church attached to the ancient royal palace, is very striking, where massive silver lamps—weighing two or three hundredweight—suspended from the storied ceiling, rich in Bible scenes, throw the dim religious light upon walls dazzling with gold mosaic—the whole interior is of this gold ground—and brilliant with pictures of sacred story. When these mosaics are on a large scale, and viewed at a correct distance, it is marvellous how capable they are of producing pictures of both force and beauty; as witness the head of our Saviour in the tribune of the latter-named church.

The many changes of race and nation that have dominated in Sicily, have stamped its people with strange and striking variety. Handsome Moorish faces—living Murillos meeting you at every corner, specially handsome in the case of young boys and children—abounding side by side with the softer Norman type of blue eyes and blond hair; while now and then the straight nose and eyebrow of the Greek tell of the strong hold each race has maintained. We should, however, be disposed to think the Eastern element the most indelible.

We were struck by the numbers of well-dressed young men lounging about in street and caffè with a lamentably idle listless air; but an ingenuous youth threw light upon the subject by reminding us that Palermo is the seat of a university!

The Oriental love of show is strongly marked by the numbers of elegant equipages that grace the fashionable drive between the town and La Favorita, a royal Bourbon palace at the base of Monte Pellegrino, and built in the rather unclassical form of a Chinese pagoda. Unlike the *solid* ideas of the proverbial Scot, who no sooner gets his head above water than he makes for land, the first ambition of a Palermian on feeling himself begin to float, is to sport a carriage; his second, to own a box at the theatre; his third, to have a dinner other than herbs—that is, salad and macaroni; and his fourth, to own a private and *particular* burying-ground.

A drive to the Cathedral and Monastery of Monreale, an early rich ecclesiastical settlement about five or six miles from Palermo, planted high on the crest of a hill, makes a charming excursion. The marble cloisters, containing above two hundred exquisitely formed small marble pillars, each one differing from another, but forming a complete whole of matchless beauty, though now, alas! stripped of its mosaic coating, testify to the wealth of these early supporters of Christianity.

Another interesting excursion, though of a different sort of interest, was to Piano dei Greci, an early Albanian colony, whose inhabitants as a body are understood to hold rather loose and heretical views on the binding nature of some of the commandments—the tenth and eighth in particular. The little town stands at the height of above two thousand feet from the level of the ocean, in a sea of hills, or rather mountains; the access to it being by a long winding, yet beautifully constructed road, the increasing altitude of which afforded scope for sudden and unlooked-for gusts of cold sweeping winds, almost as merci-

less and cutting as the Edinburgh east winds, so graphically immortalised by Sydney Smith, and so painfully felt by many a more tender pair of lungs since the days of the witty divine.

The cold was so intense, that the weaker but more numerous section of our party threatened to strike work, and incite the driver to turn his horses' heads back to the sunny plains of Palermo. The mutiny was, however, quelled by the *chef de voyage*, and on and on we went, till at last we found ourselves in the rough steep street of the little ancient town.

It was evident they were not much in the habit of receiving visitors from the outside world, as on our turning in to a little caffè for some refreshment, we were presently followed, and the doors and windows besieged, by a crowd of forty or fifty men, who gradually filled the place, taking up their position at every available point of view, back-benches, back-doors, and back-stairs, and whose coal-black eyes peered at us—with a somewhat alarming and insatiable look of wild curiosity—from out of high-peaked Mephistopheles-like hoods, surmounting the short wide brown cloak of the district. On our way back, we were much struck, in the loneliest part of the wild hill-road, by coming upon a shrine of the Virgin cut and incased in the rock, and lighted for the night by the pious thieves of Piano dei Greci.

When about half-way on our journey, we confess to have experienced a certain amount of trepidation at the wild-looking figures, sometimes one, sometimes two, and sometimes three or four, fierce, reckless-looking men, mounted on horses or mules, with long blue cloaks, high peaked hats with a jaunty feather, their belts invariably displaying a brace of pistols. These men seemed the very impersonation of our ideas of a real brigand; and our fears were not soothed, but on the contrary somewhat heightened, by the convenient-looking caves recurring ever and again in the limestone rock. The numerous *carabinieri*, however, stationed at very frequent intervals were reassuring, especially as we saw them taking note of our number, &c.

Some of the villages through which we passed gave us a peep into far-back Italian, or rather Sicilian rural life. It seemed to be universal washing-day—a wholesome if unpleasant day; and as nothing reveals more of the habits as well as the resources of the poor than a family wash—that is, when rich enough to indulge in that luxury—we were much interested in the display of linen hanging from bamboo canes—or, to speak more correctly, from the dried stalks of the Indian corn, which grows freely here—stretched in a neighbourly fashion from window to window across the narrow rocky street of eight or ten feet in width, whose sole attempt at paving had been accomplished by the roll of winter-torrents. The display was on the whole very creditable, if we except the large number of brilliant red and yellow wadded counterpanes, handsome in themselves, but so large that we fear they told tales of serving as a wholesale family covering.

Concerning the fashion of sepulture, we were very much interested, first, by a visit to the Capuchin Monastery, where, in a long, low-

vaulted crypt, the deceased monks to the number of many hundreds are in a (half)-preserved state ranged in a standing position along the walls, dressed in their black robe, with a rope as girdle. It was a ghastly spectacle.

But if the uncoffined monks were a weird sight, a thousand times more so were the ranges of the dead fashionables of Palermo, who, laid in glazed coffins tier upon tier till nearly reaching the roof, were, with their gay unseemly dresses, fully exposed to view; and a strange parody on Dress and Death it was to see young girls arrayed in mocking silk and tarlatane of the gayest hues, with gilt or silvered coronets crowning the glossy skull, the bony fingers filled with faded tinsel flowers. A photograph taken in life and health was generally attached to each coffin, giving name and age, and date of death.

It is customary for the friends of the deceased to visit the place on All-Saints' Day, and in some cases even to renew the dress of the skeletons. We were glad, however, to hear that the municipal government had passed a resolution that no further internments should be permitted in this manner, which is alike unseemly and unhealthy, as a sharp diphtheritic attack, supervening next day to one of our party, proved. A loss it will be to 'the church,' who claimed large sums for the privilege of laying the dead in this holy place—the numbers amounting to many thousand bodies.

We could not help contrasting this Tomb of Fashion with the beauty and quiet of the exquisitely situated new burying-ground lying at the foot of Monte Pellegrino, close to the shore, where the Mediterranean waves beat a lulling cadence, and where the sleepers are laid, faces eastward, as if waiting, almost watching to catch the first streak of the great Easter dawn.

THE OLD CURLER AND HIS WIFE.

It may be safely said that no outdoor game possesses greater attraction for its votaries or is more keenly enjoyed than Curling. It may be that this is partly owing to the uncertainty of ice lasting long enough to satiate the eagerness of the players of the Roaring Game;* or it may be in as great a measure due to the exhilarating nature of a pastime that unites all classes of people in a bond of fraternity for the time-being.

Played on a sheet of ice with large round stones, which are hurled or slid from one end of the rink to the other, the game demands much skill on the part of those who strive to become proficient; and especially of those who, like our 'Old Curler,' endeavour to carry off the much-coveted rink medal. In many places the stones are kept in a small house by the side of the pond or loch, so as to be handy when required. Some curling-stones weigh as much as forty pounds and upwards. Each curler is provided with a besom or broom (cove) for brushing and smoothing away snow and other obstacles to the progress of the stones. Crampits, or spiked shoes for gripping the ice, are now rarely used.

* Under this title, in No. 942, will be found explanation of many of the terms used in curling, and some hints as to playing the game.

The enthusiasm of curlers frequently increases with age, and sometimes induces them to go to the ice when discretion, or the pleadings of anxious friends, would warn them to remain at home. The wilfulness of an old Scottish curler of humble rank, as set against the solicitude of his 'guidwife,' is in a measure depicted in the following lines, which, with all the compliments of the season, and wishing our curling friends many a hearty game, we respectfully offer to our readers.

'Twas winter's deepest heart. The invading frost
Had breathed his chilliest breath o'er rippling
lakes,
And changed their laughing looks to glassy stare,
Their dimpling faces into mirrors bright
And keen, o'er which did glide, like phantom
forms,
The graceful skaters on their polished steel.

The morning sun low glinting in the lift
Had touched the hills with faint and struggling
beam,
Then mounting with red glare, was chasing swift
The hoary mists from all the hollows deep,
And smiting with his rays each rime-clad spray.
The trees stood clothed in splendour, scarce
surpassed
By summer's green; while every glistening prism,
On drooping grass-blade, shone like pearl of sea,
Or gem of Indian mine.

In cot retired,
Debate was keenly held, of moment great
To those concerned; whereof the tenor runs.

Quoth the guidman to the guidwife:
'This is the Medal day;
Tho' could's the wind, the ice is keen,
So I'll gang to the play.'

Quoth the guidwife, wi' coaxin' word:
'You winna gang a fit, man.
If you are wise, take my advice,
And by the ingle sit, man.' (fireside)

'I've played before in caulder days,
When glass stood down at zero;
Gi'e me my crampits and my broom—
I'll play like an auld hero.'

'But ye maun mind that was langsyne;
When you were young and yauld, man; (strong)
But now you're stiff, your blude is thin—
And ye have turned auld, man.'

'With frost like this, and ice so keen,
Tho' auld, I yet feel young;
Sae bring my bonnet and my plaid,
Guidwife, and haud your tongue.'

'All night you graned wi' rheumatics, (groaned)
And sair, sair, did you wheeze, man;
The cauld would nip your marrow-banes;
Your very blude would freeze, man.'

'You've ruled me lang enough, guidwife;
Henpecked nae mair I'll be;
I'll hae my will—my broom and cramps,
And to the loch I'll gae.'

'What! to the ice, in sic a day?
If you daur cross the floor, man,
I'll hide the cramps, I'll burn the cove, (broom)
And double-bar the door, man.'

At hame sits the auld man, baith dumpit and dounce,
As the guidwife, contented now, redd's up the house.

But the cow she maun milk, and the hens she maun feed,

As the guidman reminds her, and bids her make speed.

Forth she goes; when the sly loon jumps up in a trice,

And with bonnet and plaid, slips away to the ice,
Where wi' laughin' and daffin', wi' mirth and wi' glee,

He's welcomed by all, as they stand round the tee.

No sides are formed, for each to-day
Must single-handed join the play,
And on his judgment good rely:
The test is skill of hand and eye.

Each curler looked with keen-set eye,
And played with steady hand;
But surest aye the old man aimed,
The deftest of the band.

He played the draw, he played the guard,
The outwick and the in,
He struck, he raised, he chapp'd and chipp'd,
He wick'd and curled in.*

His points ran up; he far outstripped
The curlers young and auld;
He won the Medal—then trudged hame
Through driftin' snaw and cauld.

For oft, as happens in our northern clime,
Bright morning's promise glowed till mid-day's prime,

Then shaded o'er with banks of threat'ning cloud,
While gusty swirls of wind blew keen and loud,
And blacker gloomed the thickly gathering storm,
As nature frowned and darkened. In like form
The wifely heart. In part, with petulance,
But more with deep anxiety, her glance
Went out along the dark and drifting path,
Till his return, when out she broke in wrath:

'You doited, donner't, daft auld carle,
In you I've nae mair faith;
Fling bye your plaid—tak' aff your shoon;
This day will be your death.
You now may grane—you now may cough
Like ony croupit wean; (child)
Nae mair blame me, nor this auld house,
But blame the curling stane.'

'Atweel, guidwife, I played ye a plisk (trick)
When I set aff the day;
But the sun was shinin' clear i' the lift,
An' keen was I to play,
I winna say but what ye're richt,
And that I'm sair to blame;
But see, guidwife—haud out your hand—
I've brocht the Medal hame!'

Ah, well the patient husband knew her ways,
And all the goodness of her heart; and so
With gentle word and kindly look, he soothed
The ruffled feelings of the passing hour;
He marked with joy the flash of happiness
That glowed in her at mention of success.
Tho' for a time she sought to mask her pride
With grumbling words and feigned discontent,
Yet up at length the feelings of her heart

* In curling phraseology, these are 'points,' on the comparatively successful achievement of which the prize depends.

Must well, and so they issued forth in words
Revealing all the wifely warmth that burned
A sacred flame, to cherish, light, and cheer
The old man's days. All frown had passed away
From off her brows, when thus she smiling spoke:

'Be blessings on your steady hand,
And on your auld gray pow, man;
And blessings on the curling stanes,
And on your guid broom-cowe, man.
I'm proud you have the Medal won
Upon the loch this day, man;
Sae far awa', frae 'tween us twa,
Let strife for ever stay, man.'

The truce was ratified; with calm content,
Beside the lightsome hearth, they fondly talked.
With kindling face and glowing eye, he played
His games anew, while she her knitting plied.
With joyous heart, to him she listened as
He counted o'er his hard-won victories.
They talked of days of yore; re-lived again
That gladsome hour, when she, with maiden eye,
First watched him play, and her inspiring look
New-nerved his youthful hand and fired his heart
With flame of kindling love. They talked of days
Gone by, when round the hearth the children played
Their mimic games with mimic curling stones;
Or toddling ran, to carry daddy's broom;
But now, all men and maidens grown, their hearts
Went with them, as they fought the sterner strife
Of life's great battles in their varied spheres,
Yet ever and anon came back to cheer
The dear old cot they fondly called their home,
And hear again their father's curling feats.
But as the night grew wilder, with strong gusts
And roar, that told of death and suffering,
A wider sweep their kindly feelings took;
Their hearts of pity turned to those on sea,
Or lonely moor, o'ertaken by the storm;
Then with calm faith commended all to Him
Who cares for all—and slept the sleep of peace.

BOOK GOSSIP.

AMONG the dark things to be associated with the year 1882 is the death of Dr John Brown. Who does not know *Rab and his Friends*? And who, if the author of *Rab* was not known to him or her, does not wish to have known him? Gentle, kind, sympathetic, humorous—not with the humour of flippancy, but of good sense and wise insight—beloved of children, and with the inspiration of child-nature deep in his own heart, Dr Brown was one whom it was an education to know, and is almost an act of piety to remember. It is therefore with an interest that has as much of pathos as of pleasure in it, that we now receive another booklet of his papers, hitherto unpublished in this country. It is a slight thing of two dozen pages, entitled *Something about a Well, with more of Our Dogs* (Edinburgh: David Douglas), but it has within it not a little which shows the genial author at his best.

The opening paper, on the little well among the hills, is marked by the beauties of style which characterised almost everything that came from Dr Brown's pen; and his fine eye for natural effects—the eye of a painter transfused with that of a poet—is here delightfully exemplified. Again, in the papers that follow on 'Our Dogs,' his sketch of Peter, his account of the death of that old favourite Dick, and the life and adventures

of a terrible fellow called Bob, are exquisitely drawn—truthful and, to use a favourite phrase of his own, 'to the quick.' Here is one of his dog-anecdotes (we cannot think of tampering further with what the reader must read for himself): 'I have a notion that dogs have humour, and are perceptive of a joke. In the North, a shepherd having sold his sheep at a market, was asked by the buyer to lend him his dog to take them home. "By a' manner o' means tak Birkie, and when ye're dune wi' him just play so"—making a movement with his arm—"and he'll be hame in a jiffy." Birkie was so clever and useful and gay that the borrower coveted him; and on getting to his farm shut him up, intending to keep him. Birkie escaped during the night, and took the entire hirsle (flock) back to his own master!'

.

One of the most beautiful gift-books of the season is a volume from the pen of Dr Andrew Wilson, entitled *Wild Animals and Birds: Their Havens and Habits* (London: Cassell, Petter, Galpin, & Co.). It is written in the free and graceful style which characterises all Dr Wilson's productions, though the subject is dealt with rather from the point of view of the artist, than from that of the naturalist. The anecdotes given of gorillas, lions, tigers, and other of the more formidable mammals, are mingled with stories of the less ferocious *feræ naturæ*—foxes, polecats, and the like, down to the comparatively innocent hares and rabbits. Birds are similarly treated, the subjects ranging from the eagle to the wood-pigeon.

The book is splendidly embellished, the woodcuts being among the finest which the art of the graver can produce. The various animals introduced into the pictures (drawn by Wolf and others) are represented as if among their natural surroundings, from the jaguar crouching amid the luxuriant tangle and underwood of a tropical forest, to the eagle that nurses its callow-brood high up on the dizzy crag, alone with the winds and the stars. Between its pleasing gossip of wild animals and bird-life, and the beauty and suggestiveness of its pictorial illustrations, the book cannot possibly fail of being a success.

.

Scotland has been from time to time well supplied with gazetteers. The first book of this description was projected more than half a century since by Dr William Chambers, who, assisted by his brother Robert, produced in 1832 *The Gazetteer of Scotland*, a thick octavo volume of upwards of one thousand pages. The book was full of original matter, most of which had been gleaned by the elder of the two brothers laboriously tramping the country in search of the requisite information. Books of a similar nature had also been published by the two literary brothers previous to this time—*The Book of Scotland*, by William Chambers, and *The Picture of Scotland*, by Robert Chambers.

To the works on Scottish topography thus originated, others on the same lines have succeeded; one of the latest in this class being *The Gazetteer of Scotland*, by the Rev. John M. Wilson (Edinburgh: W. & A. K. Johnston).

Those who have occasion frequently to consult books of reference upon matters of technical or geographical detail, are aware how satisfactory it is to find a book which gives you what you want in few words, and without necessitating your wading through pages of generalities till you discover what you are in search of. Mr Wilson's *Gazetteer*, though confined within the boards of one conveniently sized octavo volume, is yet extensive enough to embrace every town and village of any importance in Scotland, briefly described, and its topographical position defined. In a book such as this, it is impossible to escape errors of a certain kind; but these are not such in this case as to render the book an unsafe guide. The figures of the population are taken from the recent census returns; and the usual information contained in this class of book, such as that referring to public works, public buildings, churches, schools, is briefly and concisely given. The natural features and historical associations of the several localities also receive passing allusion.

.

A very valuable series of historical handbooks is presently being issued by the Society for the Promotion of Christian Knowledge, called the Early Britain series. The distinctive qualities of this series apparently are, that the volumes should not be bulky, that each should embrace one aspect of the general subject, and that that aspect should be placed before the reader by a scholar of special and comprehensive knowledge in the particular branch of history under consideration. Of this series, two volumes have been issued. The first is entitled *Anglo-Saxon Britain*, by Grant Allen, B.A., and gives a brief sketch of Britain under the early English conquerors, rather from the social than from the political point of view. 'The principal object throughout,' says the author, 'has been to estimate the importance of those elements in modern British life which are chiefly due to purely English or Low-Dutch influences.' Mr Allen writes in a forcible style, and has a good eye for picturesque effects; hence a matter of dry history which might seem to some readers unattractive, and even repellent, becomes pleasant to peruse and of easy comprehension.

The other volume that has been issued of this series is *Celtic Britain*, by Professor Rhys. It has not quite the same charm of style as renders Mr Allen's work attractive; but on the other hand it more than makes this up to the historical student by the amount of fresh and interesting information which the author has been able to offer in connection with the very dark and difficult subject of Celtic origins. One interesting item has reference to the coins in use among the early Britons. It has generally been assumed, on the authority of Julius Cæsar, that no money was current in Britain in his time, but only bronze or pieces of iron of a fixed weight to supply its place. The passage in Cæsar's work in which this is stated is, however, according to Professor Rhys, hopelessly corrupt, and the manuscripts differ greatly, some of them ascribing to the Britons the use of coins of gold, and some of bronze. British coins have, however, been found, and,

according to the greatest authority on the subject, the inhabitants of the south of Britain must have begun to coin gold pieces from a hundred to a hundred and fifty years before the time of Julius Cæsar's invasion. This of itself is an interesting point to determine in the progress of civilisation among the early Britons.

CHRISTMAS ART PRODUCTIONS.

We have received from Messrs S. Hildesheimer & Co., fine art publishers, London, a box of Christmas and New Year Cards in rare and beautiful designs. These designs are the result of a prize competition originated by the above firm of publishers, and in connection with which prizes were awarded to the amount of two thousand pounds. It is interesting to note that the highest prizes—ranging from the first (a hundred and fifty pounds) to the fifth (twenty-five pounds)—were all won by ladies, showing that the successful cultivation of art for such designs as those referred to is well within the range of useful female accomplishments. The designs have been exquisitely copied by the chromo-lithograph process, and many of the Cards are deserving of permanent preservation.

THE MONTH.

SCIENCE AND ARTS.

THE account which Mr Colquhoun lately read before the Royal Geographical Society of his explorations in the South China Borderlands was full of interest, chiefly because there have been previously only three European expeditions which covered the same ground. We no longer wonder at this, when we hear what an antipathy the natives show towards foreigners. In the provinces of Kwang-tung and Kwang-si there were marked signs of this animosity, for the people mobbed the travellers and hooted at them with cries of Fanqui-to (Foreign devil). But the feelings of the people towards strangers can best be estimated from the fact that no missionaries of any sect whatever have yet dared to settle in this part of the country, although some have done so in the provinces to the north.

One most interesting portion of Mr Colquhoun's paper dealt with the Opium question, about which we have heard so much within recent years. He declares that the use of the drug has a most injurious effect upon the Chinese, but that the aborigines drink a rice spirit, and do not touch opium. He does not see how the opium consumption can be stopped; for although the government issue edicts against its cultivation and exportation, the poppy is often to be seen growing under the shadow of official courts, and it is not uncommon to see mandarins lying in their sedan-chairs in a state of stupor from the drug. Mr Colquhoun believes that if the exportation of opium from our Indian possessions were to cease immediately, its consumption in China would not be permanently checked, for a larger area of country would be devoted to its cultivation.

The Council of the Geographical Society have completed all arrangements for the forthcoming expedition to Africa; and Mr Thomson, after staying some months at Zanzibar, getting ready

his goods and staff, will probably start on his dangerous mission in the early spring. The expedition is purely geographical, and its direction is towards the east and north-east of Lake Victoria Nyanza. But it is more than probable that a skilled naturalist will accompany it. Mr Thomson's task is no easy one, a great portion of the country to be traversed being of the most desolate description, where no provisions can be had, and where even water is scarce. Added to these discomforts is the fear of bands of roving Masai, whose lawless doings have scattered peaceably disposed tribes, and stopped cultivation. The expenses of the expedition are estimated at two thousand pounds, which will be defrayed by the Geographical Society.

Mr Muybridge's famous photographs of animals in motion seem to have given a great impetus to the contrivance of simple apparatus for exhibiting such pictures in series, so that they can be brought quickly before the sight one after the other, giving the impression of actual movement. The French popular scientific paper *La Nature* gives a description of one of these little machines, which can be used by the help of an ordinary lamp-light. It has two lenses, the duty of one being to throw the image of a background—magic-lantern fashion—on to a screen; whilst the other lens is devoted to the photographs of the moving figure. In this way a very natural result can be brought about. The apparatus referred to is by M. Reynaud, and he calls it the Praxinoscope, a name, by-the-by, borrowed from a contrivance of a somewhat similar character introduced in this country many years ago.

At the recent Photographic Exhibition in London, there was exhibited a new form of lamp for taking portraits at night. Everybody knows what a wonderful light can be obtained by burning a few inches of magnesium wire. In this lamp the same medium is employed, but instead of being consumed in the ordinary way, it is burnt in an atmosphere of pure oxygen. The light given is sufficiently intense to allow of a picture being taken in a fraction of a second.

Mr Fletcher of Warrington—whose gas-stoves and other labour-savers have been already noticed in these pages—records that the various Electric Light Companies are exceedingly good customers for gas. Most of these Companies have been supplied by him with gas apparatus, and some to a very large extent. The gas Companies have certainly not taken advantage of the more brilliant light dealt in by their rivals. But an exception must be named in the Amsterdam Gas Company, whose various offices, engine-room, &c., are lighted by incandescent electric globes, the motive-power for driving the dynamo-machine for feeding them being furnished by a gas-engine. Whether the Company intends this installation as a trial of the strength of its rival, or whether the supply of the electric light is going to be undertaken conjointly with gas, we do not know; but in either case our Dutch friends have exhibited an intelligent interest for the welfare of their shareholders.

Those who have never looked through a telescope, and have merely heard of sun-spots as mysterious visitants which seem to have a curious

influence on harvests, vintages, climatic conditions generally, and even upon commercial panics, have had an opportunity of seeing a remarkably large one with their unaided vision. During a recent fog in the Metropolis, this huge spot could be plainly seen on the red disk whose rays tried to pierce the mist, and was so prominent that it could not escape the notice of the most casual observer. Mr F. Brodie, F.R.A.S., describes this spot as seen through a powerful telescope. He says that it is not only unusually large, but is making very rapid transformations of shape, which are of exceeding interest.

It has been the fond dream of many a musician that if he could only dot down, or get somebody else to dot down for him, the outpourings of his genius as he lays his hands upon the keys and breaks forth into melody, he would be on the road to fame and fortune. The literary man has his scribe, and even the busy solicitor or merchant has his shorthand writer to whom he can dictate letters which only require his signature to make them complete. But hitherto the musician has had no such advantage; his crotchets, quavers, and semiquavers have had to be spelt out upon the stave, with the aggravating feeling of ideas flowing faster than the power to give them permanence. The pianist need now no longer despair. After innumerable attempts in past times to construct an apparatus which would print off characters representing any piece played on its keyboard, one has at last been devised which is successful. Its outward form is that of an ordinary cottage pianoforte, but hidden underneath the keys is a cylinder covered with paper. Upon this paper, certain little nibs attached to the under-side of the keys make their mark, after being supplied by mechanical means with suitable ink. This transcribed harmony can afterwards be readily translated into the ordinary musical notation, a task which is said to be sufficiently simple to be undertaken by a person of ordinary intelligence.

Certain telephonic experiments at Havre have proved so promising in their results, that it has been proposed to establish a regular system between that city and the various vessels at anchor in the roads. For this purpose a pontoon structure, which will form the floating terminus of this curious system of maritime communication, will be placed at some distance from the land, and neighbouring vessels will send their messages to it. There are many places on our own coasts where a similar arrangement would be of immense service.

Fireproof paper is being made from a mixture of vegetable fibre, asbestos, borax, and alum, in certain definite proportions; while an ink, also indestructible by fire, for writing upon it, is of the usual constituents, with the addition of graphite. Another novelty from the paper-mills is a luminous and waterproof cardboard, presumably intended for night advertising. The luminosity is produced by the same means as that in Balmain's luminous paint; and the cardboard owes its waterproof quality to the employment in its manufacture of bichromate of potash and gelatine. These two agents when combined become insoluble after exposure to light. With such a self-illuminating substance, there is now no reason why the names of streets and the num-

bers of houses should not be as distinct by night as by day. We observe that the Town Council of Edinburgh have resolved to make an experiment in this direction with a number of streets within the city, in order to ascertain practically what benefits may be derived after dark by street names and house numbers being rendered luminous.

It may be mentioned also that the fire-resisting properties of asbestos may be communicated to ordinary paint. Paint, mixed with asbestos liquid, is, we understand, largely used in America for several purposes, such as coating wood exposed to heat. Three coats will render wood fire-proof, and it is found especially serviceable in hot climates, where wooden houses are general, to serve as a preventative against fire and as a non-conductor to keep the house cool.

M. Lacroix, a Paris chemist, has introduced a new form of pencil, which will prove useful to those engaged in painting on glass or china. Resembling the ordinary cedar pencil in outward appearance, the lead is represented by a coloured mixture of a vitrifiable nature. By drawing on roughened glass or upon unglazed porcelain with this crayon, the material can afterwards be exposed to the heat of a muffle or crucible, with the result that the lines of colour are burnt in and rendered permanent.

The *New York Herald* correspondent of the party who went in search of the crew of the ill-fated *Jeanette* has made some interesting notes relative to the inhabitants of Northern Siberia. Among other items, he mentions that they have wonderfully beautiful teeth, even old men of sixty and seventy years possessing natural sets of pearly whiteness. Indeed, they are altogether free from the dental suffering and decay which seem inseparable from high civilisation. He attributes this immunity from a very distressing form of ailment principally to the simple food which these people indulge in, particularly the fermented sour-milk, which is such a powerful anti-scorbutic; and also to the curious practice which prevails among them of chewing after every meal the resin from a species of fir-tree, for the purpose of clearing their teeth from adherent particles of food.

We hear so much about the transmission of energy by electrical means, that we are apt to lose sight of the fact that other natural forces can be employed in a like manner. The energy of the hydraulic ram we well know can be transmitted by piping made specially to withstand the pressure of the water, but hitherto air has not been so much used as it might be for such a purpose. In Paris, however, a system of transmitting energy by means of air is about to be tried, and as the plan seems to be a promising one, we shall look forward with interest to its development.

With respect to our recent remarks regarding the unsatisfactory official reports on the artificial hay-drying machine trials at Reading, Mr Streeter, of Sackville Place Farm, Buxted, Kent, who has been using Gibb's exhaust-fan, has kindly given us some particulars of his experience. On one day the hay from a field of twelve acres was carried, carted, and stacked, the rain being so incessant that the men employed were all wet through. The temperature of the resulting stack after a short time rose to one hundred and eighty

degrees; the fan was then set to work and quickly reduced it to eighty degrees. This rise, and reduction of temperature by the fan, went on for three weeks, when the hay was dry and in first-rate condition. A field of clover and two or three stacks of oats were treated in the same way, which under ordinary conditions would have been quite spoiled. Mr Streeter speaks very highly of the action of the little machine, the cost of which is only twelve pounds.

Professor Graham Bell, the father of Telephony, lately read a paper before the American Association for the Advancement of Science, on the electrical experiments which were made with a view to discover the whereabouts of the bullet in President Garfield's body. He pointed out that the induction balance, in conjunction with a telephone, would indicate by a peculiar spluttering sound the presence of a leaden bullet five inches away from it. In the case of the wounded President, this peculiar noise became evident when the instrument passed over a particular region; but, curiously enough, this did not indicate the position of the assassin's bullet, but was produced by a steel spring in the mattress under the patient's bed. The apparatus has been much improved, and now Professor Bell is of opinion that the exact position of a bullet in any part of the human body can be noted without the least difficulty.

Sir John Lubbock, whose industry is scarcely excelled by the bees, he studies so carefully, has submitted to the Linnean Society some further observations referring to those insects. These observations relate more especially to their appreciation of sound, with a view to determine whether there is any real value in the popular idea that bees are influenced when swarming by the sound of clanging kettles, &c. Since the time of Aristotle, this notion has prevailed, and although experienced apiarists have little faith in it, Sir John Lubbock, without committing himself to any decided opinion, believes that the insects may hear overtones of sounds which are beyond our range of hearing. In his experiments, he trained bees to come for honey to a musical-box which was kept going for several hours a day for a fortnight. It was placed during the time on a lawn close to a window; afterwards it was removed to the house, and, while still playing, was placed out of sight, although only a few yards from where it formerly stood. The bees failed to find it; but they readily came to it for the honey, when shown to them; proving that so far as regards sounds audible to us, they exhibit little appreciation of them.

Some years ago, Mr Douglas Galton, F.R.S., contrived a whistle the note of which could be altered at will until a pitch was reached quite inaudible by any human ear. But that a sound really existed was proved by the effect on a sensitive flame, whenever this apparently dumb whistle was blown in its vicinity. By this instrument it might be possible to determine whether Sir John Lubbock's surmise regarding the bees' appreciation of overtones is correct. It is just possible that there may not be sounds pervading all nature, which, though inaudible to mankind, delight the more humble denizens of the globe.

A new signalling experiment has been made

in Paris by M. Mangin, a member of the Académie d'Aérostation. He filled a small balloon with pure hydrogen, which is lighter, and therefore has greater ascending powers than ordinary coal-gas, and hung in its centre, in the midst of the gas, a Swan incandescent lamp. The balloon, which was made of a translucent material, was well illuminated, and could be seen from some distance. Moreover, by interrupting the current in connection with the lamp, the Morse alphabet could be easily spelt out in the form of long and short flashes. This experiment is, we fancy, more remarkable for its ingenuity than for its practical value. The double wire for carrying and returning the current must be of a certain thickness, and its weight would of course limit the altitude of the machine.

A recent Report by M. Girard, director of the municipal laboratory of Paris, shows that the art of adulteration is carried on there with great skill—indeed we may look upon it as a fine art and a scientific pursuit combined. Currant jelly, without a particle of currant juice in it, is manufactured from a kind of sea-weed, coloured with fuchsine, and flavoured with a mixture of acetic ether, tartaric and other acids. Other favourite compounds supposed to be produced from natural fruits, have their flavours made up from still more doubtful chemical combinations. Flour is largely adulterated with mineral agents, sometimes of a poisonous nature, plaster of Paris and sulphate of baryta being common; and the staff of life itself when thus injured is often insufficiently baked, so that its weight may be increased.

According to the *Vienna Agricultural Gazette*, it has recently been discovered that meerschaum pipes of excellent quality, susceptible of the highest polish, and even more readily colourable than the genuine *spuma di mare*, may be made of potatoes. The familiar tuber, it seems, is well qualified to compete with the substance known to commerce as 'meerschaum clay.' Its latent virtues in this direction are developed by the following treatment. Having been carefully peeled, and its 'eyes' extracted, the potato is boiled uninterruptedly for thirty-six hours in a mixture of sulphuric acid and water, after which it must be squeezed in a press until every drop of natural or acquired moisture is extracted from it. The residuum of this simple process is a hard block of delicate creamy white hue, every whit as suitable for the manufacture of ornamental and artistically executed pipe-heads as the finest clay. The potato, moreover, dealt with in the manner above described, promises to prove a formidable rival to the elephant's tusk. As potatoes are plentiful all over the world, and are likely to remain so, whilst elephants are, comparatively speaking, rarities, mankind at large may be fairly congratulated upon the discovery of a substitute for ivory which can be produced in unlimited quantities and at an almost nominal cost, taking into consideration the difference of price between a pound of potatoes and a pound of elephant's tusk.

From official returns, it appears that in India, during 1881, no fewer than 18,670 human beings were killed by snakes, and 2759 by 'wild animals'; whilst 43,609 head of cattle were in like manner destroyed. As a set-off to this terrible loss, we learn that 254,968 snakes and 15,274 'wild

animals' were destroyed, and upwards of ten thousand pounds paid by the Indian government for their destruction? In a country such as India, where deadly snakes abound, and where the natives are in the habit of going with bare feet and limbs, the annual sacrifice of human life must continue to be more or less appalling.

A method of curing herring and other kinds of fish has been introduced by Mr George Leach, of Hull. Mr Leach's plan consists in the application of machinery to the curing of fish, and particularly to the 'bloatering' of herrings, in place of the slow and otherwise unsatisfactory processes by manual labour. The mechanism employed is contained in three towers or chambers, rising to a height of twenty-four feet, through which the fish, either spitted or placed back downward on wirework grills, are passed, and undergo successively the process of drying, smoking, and cooling. Mr Leach estimates that such an establishment would be able to bloat seventy-one barrels, or forty-seven thousand herrings, or cure six and a half tons, or eighteen thousand six hundred finnan haddocks, every ten hours; and that two hundred and fifteen thousand sprats, carried on creeper nets, instead of spits or grills, could be dealt with in the same time; also, that by his system a barrel of herring—equal to six hundred fish—can be bloated at a cost of sixpence, as against one shilling and ninepence, the present cost.

OCCASIONAL NOTES.

A WONDERFUL TIMBER REGION.

QUOTING from *The Colonies and India*, we learn that in the Far West, in a lovely country which once belonged to England, but was afterwards ceded to the United States, there grows the finest body of timber in the world. Fir and pine, and oak and cedar, of unsurpassed quality and practically unlimited in quantity, clothe the mountains, overhang the rivers, and shadow the plains of the Puget Sound district in Washington Territory. On a moderate estimate it is calculated that this region will yield the enormous and unimaginable quantity of one hundred and sixty thousand million feet of valuable timber. The trees attain a remarkable development both of height and beauty. The yellow fir is frequently found growing to a height of two hundred and fifty feet; the white cedar to one hundred feet, with a girth of over sixty feet; the white oak to seventy feet in height; whilst ordinary sized specimens of the sugar-pine yield from six to eight thousand feet of lumber each. For long after its discovery, this marvellous store of timber remained undisturbed, its primeval quietness unbroken by the sound of the woodman's axe. But in 1851 a saw-mill was built on Puget Sound, and thenceforward continually increasing inroads were made upon the forest, until to-day no fewer than fifteen such mills are at work upon it. The largest of these has a cutting capacity of two hundred thousand feet per diem. During the year 1881 the export of lumber from Puget Sound amounted to nearly one hundred and seventy-four million one hundred and seventy-six thousand seven hundred feet, valued at nearly two million dollars; and

it is calculated that since the establishment of the first saw-mill about two thousand five hundred million feet have been cut. Yet in spite of this great tax upon them, we are told that the forest remains for the most part in virgin condition, except for a short distance from the banks of the streams and estuaries.

AN AMERICAN CONFIDENCE TRICK.

Much has been said and written about the simplicity on land of poor Jack-tar. Now, let me relate a true story, in which I, second-mate of the *Ocean Queen*—we will say—played a conspicuous part.

We had had a tough passage from the Cape, got stranded, and hove-to once or twice; then came heavy seas and high winds that bore us out of our course; hence all hands were glad enough when we got into port, New York City. It was the first time I had set foot in Yankee-land, so perhaps it is a bit excusable if my first impression was a curious and lasting one. The boatswain—a very good fellow, open-hearted as any of his kind—and myself were walking down one of the principal thoroughfares of the city, when our glances at one and the same time alighted upon a kid glove lying in the street. One of us—I forget which—picked it up, and with an ejaculation—from both—discovered a lady's gold ring set with stones fixed in one of the fingers. In the flush of astonishment at our good luck, before even we had decided upon what to do, a gentleman tapped us on the shoulder and in a few words informed us that he had been an eye-witness of the discovery, and could, if we so desired, give us information respecting its value and best method of its most profitable disposal, he having been, he said, 'at one time in the trade.'

We listened, and were willing to consent to the new-comer's taking one-third the profit in exchange for the 'valuable information.' Hereupon, the latter, stating as his reason his having business that called him up-country that very day, unanimously proposed to sacrifice his share for, 'Say, five pounds down; an' I guess it's no bad bargain ye're makin',' he added with all good temper and much good-will; then commencing to give evidence of his knowledge and past experience 'in the trade,' by drawing attention to the eighteen carat gold, the purity of the 'first-water' stones, &c.

Five pounds down! We were flush of coin, and inclined to be more than generous. My mate was ready at once to agree to the arrangement; but for myself I felt a sudden uneasiness, a faint sort of suspicion, and when called upon for my consent, expressed my disinclination. The boatswain grew somewhat warm; but I was determined and obdurate. I would not assent. Rather would I have nothing whatever to do with it, I said. Very well, then; he would. The bargain was struck. The money passed hands. The stranger smilingly bade us good-day, wishing us many pleasant voyages and many more such strokes of luck, and was gone; leaving my mate and self, the former minus five pounds of his hard earnings, but in possession of an old kid glove, a piece of Brummagem jewellery, worth—as he afterwards learnt to his sad experience—sixpence, and a mind full to distraction of 'valuable information!'

A NEW TORPEDO BOAT.

The latest engine of torpedo-warfare, and one that is not unlikely to entirely supersede our English torpedo-boats, is Nordenfeldt's new submarine boat, which was recently launched at Harlswick in Sweden. This terrible adjunct of our modern destructive warfare is fitted with engines indicating one hundred horse-power, and will, it is said, easily attain a speed of fifteen miles an hour above, and thirteen miles below, the surface of the water. The vessel is sunk to the required depth by the admission of water into tanks; but it is only intended to be submerged to the depth of a foot or so when about to attack an enemy's ship. When the work of destruction is complete, the boat re-emerges from the water by the operation of special automatic machinery. The hull itself, which is constructed of Swedish steel, of a minimum thickness of half an inch, is of the cigar pattern, and is only with difficulty visible even when floating on the surface. The length is sixty-four feet, and the diameter about eight, the engine-room being seven and a half feet in height; and the gross weight of the whole vessel when fully manned and equipped is sixty tons. A sort of glass bell-shaped helmet rises from the centre of the boat, and into this the captain puts his head when under water, thus commanding an all-round view and enabling him to direct the general movements of the craft. In case of accidents, the hull is divided into water-tight compartments; and extra pumping-machinery is provided, to be used in the event of any portion of the automatic apparatus failing to raise the vessel to the surface. The crew consists of three men, and the armament of four torpedoes, two being of the 'fish' pattern, and two of the ordinary spar or pole species. Against such an insidious foe as this Nordenfeldt boat, it is obvious that the ordinary wire-netting for the defence of ironclads from the hitherto employed torpedo-boats, will be useless; and unless further means of defence are now provided, warfare with our present huge vessels promises more than ever to become a thing of the past.

OIL ON THE WATER.

On the 4th of December, Captain Brice, one of the inspectors of the Board of Trade, was in Aberdeen, watching experiments for the purpose of rendering the passage of vessels over the bar safe in stormy weather, by pumping oil upon the water. A heavy south-westerly gale was blowing. Just before the experiments commenced, the ship *Canoid* of Peterhead had a narrow escape, while making for the harbour entrance. Since experiments were first made, some alterations have been effected in the pipes, adding greatly to the efficiency of the system. Seal-oil was used. After the pumps had been

at work twenty minutes, the crested waves, which were dashing with great fury against the piers, became greatly assuaged, and the entrance was rendered safe. The experiments were considered successful.

NEW GUARD-RAIL FOR FISHING-BOATS AND OTHER VESSELS.

There can be no doubt that the low gunwales of our fishing-boats, whilst affording the greatest facilities for working their nets, are at the same time a fruitful source of danger in stormy weather. It has lately been sought to remedy this defect by various devices, the great points to be aimed at being the construction of a movable guard-rail of sufficient height, and strength to afford protection, and yet of such a character as to admit of being raised and lowered, in whole or in part, with ease and rapidity. A new guard-rail, with this object, has been designed by Mr John Gunn, of Golspie. The rail is hinged and folding, and lies in a groove along the gunwale when not in actual use, and is then so entirely out of the way as not in the slightest degree to embarrass the working of the nets. The rail may be used in sections. It consists of a row of standards about two feet in height and about two feet apart, with a continuous top-rail. The cost of fitting a first-class boat—say of forty feet keel—with the safety-rail will, we understand, be from ten to twelve pounds.

Volume XIX. of the Fourth Series of CHAMBERS'S JOURNAL is now completed, price Nine Shillings.

A Title-page and Index, price One Penny, have been prepared, and may be ordered through any bookseller.

An elegant cloth case for binding the whole of the numbers for 1892 is also ready.

Back numbers to complete sets may at all times be had.

In our next Part will be presented the opening chapters of a Novel of powerful interest, entitled

ONE FALSE, BOTH FAIR.

BY JOHN B. HARWOOD,

Author of *Lord Penrith*, *Lady Flavia*, *The Tenth Earl*, &c.

In the next Part of the Journal will also be given, amongst other offerings of varied interest, the first portion of a Story, entitled

FOR HIMSELF ALONE.

BY T. SPEIGHT,

Author of *Begumbagh*, &c.

END OF NINETEENTH VOLUME.

Printed and Published by W. and R. Chambers,
47 Paternoster Row, London, and 339 High Street, Edinburgh.
